Ram,

I gave Leslie a call to clarify the feedback Jim had heard from NEI on 2 items for the upcoming Feb. 13 meeting:

1. The request to discuss the impact of the Japanese earthquake on new reactor applications.

Leslie mentioned that they plan to raise this as a question, but do not expect a presentation, or extended discussion - just a very short update on what we are currently doing. No need to place this item on the agenda.

2. They do want to remove the Backfill ITAAC item from the agenda for this meeting. They would prefer to wait for a future meeting on that until after Southern has their meeting with us (looks like that will happen at the end of this month) where Southern is presenting data from their test pad.

So.....they've suggested (and I agree) that we should move the PSHA item to earlier in the agenda, but we should allocate the extra time leftover from removing the backfill item to allow for more discussion of PSHA (keep the presentation times the same, but allow more discussion time after the presentations.

Leslie, thanks for taking the time to clarify these items with me!

Thanks,

Becky
