William G. Ross Jr., Secretary
B. Kelth Overcash, P.E., Director

March 21, 2007

Mr. Eric McCartney
Plant Manager
CP&L - Harris Nuclear Plant
5413 Shearon Harris Road, HNP03
New Hill, NC 27562

Subject: Air Permit No. 08455R04
CP&L - Harris Nuclear Plant
New Hill, Wake County, North Carolina
Fee Class: Synthetic Minor
Site Number: 05/92/00599

Dear Mr. McCartney:

In accordance with your completed application received December 28, 2006, we are forwarding herewith Permit No. 08455R04 to CP&L - Harris Nuclear Plant, New Hill, Wake County, North Carolina for the construction and operation of air emissions sources or air cleaning devices and appurtenances. Additionally, any emissions activities determined from your air permit application as meeting the exemption requirements contained in 15A NCAC 2Q .0102 or 15A NCAC 2Q .0503 have been listed for information purposes as an "ATTACHMENT" to the enclosed air permit. Please note the records retention requirements are contained in General Condition 2 of the General Conditions and Limitations.

If any parts, requirements, or limitations contained in this permit are unacceptable to you, you have the right to request a formal adjudicatory hearing within 30 days following receipt of this permit, identifying the specific issues to be contested. Such a request will stay the effectiveness of the entire permit. This hearing request must be in the form of a written petition, conforming to G.S. 150B-23 of the North Carolina General Statutes, and filed with the Office of Administrative Hearings, 6714 Mail Service Center, Raleigh, NC 27699-6714. The form for requesting a formal adjudicatory hearing may be obtained upon request from the Office of Administrative Hearings. Unless a request for a hearing is made pursuant to G.S. 150B-23, this air permit shall be final and binding.

You may request modification of your air permit through informal means pursuant to G.S. 150B-22. This request must be submitted in writing to the Director and must identify the specific provisions or issues for which the modification is sought. Please note that the permit will become final and binding regardless of a request for informal modification unless a request for a hearing is also made under G.S. 150B-23.

Unless exempted by a condition of this permit or the regulations, construction of new

air pollution sources or air cleaning devices, or modifications to the sources or air cleaning devices described in this permit must be covered under a permit issued by the Division of Air Quality prior to construction. Failure to do so is a violation of G.S. 143-215.108 and may subject the Permittee to civil or criminal penalties as described in G.S. 143-215.114A and 143-215.114B.

This permit shall be effective from March 21, 2007 until February 29, 2012, is nontransferable to future owners and operators, and shall be subject to the conditions and limitations as specified therein.

Changes have been made to the permit stipulations. The Permittee is responsible for carefully reading the entire permit and evaluating the requirements of each permit stipulation. The Permittee shall comply with all terms, conditions, requirements, limitations and restrictions set forth in this permit. Noncompliance with any permit condition is grounds for enforcement action, for permit termination, revocation and reissuance, or modification, or for denial of a permit renewal application. Specific changes and additions are summarized below (note: this list may not include all changes and additions):

Added the following temporary sources to the permit:

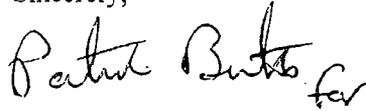

- 1300 kW diesel fired generator (ID No. TEMP-GEN)
- 600 HP diesel fired firewater pump (ID No. TEMP-FP)

Modified the fuel use restrictions currently listed in the permit to provide more operational flexibility under stipulation 2Q .0315.

- Previous fuel restrictions for the boilers (1,927,000 gallons/year) and diesel engine generators/compressors (349,000 gallons/year).
- Changed fuel usage restrictions to: Boilers (Boiler B and Temporary Boiler) limited to 1,045,000 gallons/year using No. 1/No. 2 fuel oil, large diesel engines (Generators A, B, and C, and the requested temporary standby generator) limited to 342,000 gallons/year using No.1/No. 2 fuel oil, and Small Diesel Engines (Compressors 1 through 4 and requested temporary firewater pump) limited to 43,000 gallons/year using No.1/No.2 fuel oil.

Should you have any questions concerning this matter, please contact Dena Pittman at (919) 791-4200.

Sincerely,

A handwritten signature in black ink, appearing to read "Ernie Fuller". The signature is written in a cursive style with a large initial "E" and a long, sweeping underline.

Ernie Fuller

NORTH CAROLINA ENVIRONMENTAL MANAGEMENT COMMISSION

DEPARTMENT OF ENVIRONMENT AND NATURAL RESOURCES

DIVISION OF AIR QUALITY

AIR PERMIT NO. 08455R04

Issue Date: March 21, 2007

Effective Date: March 21, 2007

Expiration Date: February 29, 2012

Replaces Permit: 08455R03

To construct and operate air emission source(s) and/or air cleaning device(s), and for the discharge of the associated air contaminants into the atmosphere in accordance with the provisions of Article 21B of Chapter 143, General Statutes of North Carolina (NCGS) as amended, and other applicable Laws, Rules and Regulations,

CP&L - Harris Nuclear Plant
5413 Shearon Harris Road
New Hill, Wake County, North Carolina
Fee Class: Synthetic Minor
Site Number: 05/92/00599

(the Permittee) is hereby authorized to construct and operate the air emissions sources and/or air cleaning devices and appurtenances described below:

Emission Source ID	Emission Source Description	Control System ID	Control System Description
Compressor 1	No. 2 fuel oil-fired emergency compressor (475 horsepower)	N/A	N/A
Compressor 2	No. 2 fuel oil-fired emergency compressor (475 horsepower)	N/A	N/A
Compressor 3	No. 2 fuel oil-fired emergency compressor (475 horsepower)	N/A	N/A
Compressor 4	No. 2 fuel oil-fired emergency compressor (475 horsepower)	N/A	N/A
Generator A	No. 2 fuel oil-fired emergency generator (9,074 horsepower output)	N/A	N/A
Generator B	No. 2 fuel oil-fired emergency generator (9,074 horsepower output)	N/A	N/A
Generator C	No. 1 fuel oil-fired emergency generator (650 kilowatt output)	N/A	N/A
Boiler B	No. 2 fuel oil-fired boiler (87.4 million Btu per hour heat input)	N/A	N/A
TEMP-BOILER (NSPS)	No. 2 fuel oil-fired temporary boiler (86 million Btu per hour heat input)	N/A	N/A
TEMP FP (NSPS)	No.2 fuel oil-fired firewater pump (up to 600 HP)	N/A	N/A
TEMP-GEN (NSPS)	No. 2 fuel oil-fired emergency generator (up to 1,300 kilowatt output)	N/A	N/A

in accordance with the completed application 9200599.07A received December 28, 2006 including any plans, specifications, previous applications, and other supporting data, all of which are filed with the Department of Environment and Natural Resources, Division of Air Quality (DAQ) and are incorporated as part of this permit.

This permit is subject to the following specified conditions and limitations including any TESTING, REPORTING, OR MONITORING REQUIREMENTS:

A. SPECIFIC CONDITIONS AND LIMITATIONS

1. Any air emission sources or control devices authorized to construct and operate above must be operated and maintained in accordance with the provisions contained herein. The Permittee shall comply with applicable Environmental Management Commission Regulations, including Title 15A North Carolina Administrative Code (NCAC), Subchapter 2D .0202, 2D .0503, 2D .0516, 2D .0521, 2D .0524 (40 CFR 60, Subpart Dc), 2D .0530, 2D .0535, 2Q .0315 and 2Q .0317 (Avoidance).
2. EMISSION INVENTORY REQUIREMENT - At least 90 days prior to the expiration date of this permit, the Permittee shall submit the air pollution emission inventory report in accordance with 15A NCAC 2D .0202, pursuant to N.C. General Statute 143 215.65. The report shall be submitted to the Regional Supervisor, DAQ. The report shall document air pollutants emitted for the 2010 calendar year. The Regional Office will send information on how to submit the emissions inventory, along with a reminder to renew your permit, about six months prior to your permit expiration. If you do not receive this information, please contact the Regional Supervisor, DAQ.
3. PARTICULATE CONTROL REQUIREMENT - As required by 15A NCAC 2D .0503 "Particulates from Fuel Burning Indirect Heat Exchangers," particulate matter emissions from the fuel burning indirect heat exchangers shall not exceed the allowable emission rates listed below:

Source	Emission Limit (lbs/million Btu)
No. 2 fuel oil-fired boiler (87.4 million Btu per hour heat input) (Boiler B)	0.29
No. 2 fuel oil-fired temporary boiler (86 million Btu per hour heat input) (TEMP-BOILER)	0.26

4. SULFUR DIOXIDE CONTROL REQUIREMENT - As required by 15A NCAC 2D .0516 "Sulfur Dioxide Emissions from Combustion Sources," sulfur dioxide emissions from the combustion sources shall not exceed 2.3 pounds per million Btu heat input.
5. VISIBLE EMISSIONS CONTROL REQUIREMENT - As required by 15A NCAC 2D .0521 "Control of Visible Emissions," visible emissions from the emission sources, manufactured after July 1, 1971, shall not be more than 20 percent opacity when averaged over a six-minute period, except that six-minute periods averaging not more than 87 percent

opacity may occur not more than once in any hour nor more than four times in any 24-hour period. However, sources which must comply with 15A NCAC 2D .0524 "New Source Performance Standards" or .1110 "National Emission Standards for Hazardous Air Pollutants" must comply with applicable visible emissions requirements contained therein.

6. 15A NCAC 2D .0524 "NEW SOURCE PERFORMANCE STANDARDS" - For No. 2 fuel oil-fired temporary boiler (86 million Btu per hour heat input) (ID No. TEMP-BOILER), the Permittee shall comply with all applicable provisions, including the notification, testing, reporting, recordkeeping, and monitoring requirements contained in Environmental Management Commission Standard 15A NCAC 2D .0524 "New Source Performance Standards" (NSPS) as promulgated in 40 CFR 60, Subpart Dc, including Subpart A "General Provisions."

a. NSPS Reporting Requirements - In addition to any other notification requirements to the Environmental Protection Agency (EPA), the Permittee is required to NOTIFY the Regional Supervisor, DAQ, in WRITING, of the following:

- i. The date construction (40 CFR 60.7) or reconstruction (40 CFR 60.15) of an affected source is commenced, postmarked no later than 30 days after such date. This requirement shall not apply in the case of mass-produced facilities which are purchased in completed form;
- ii. The actual date of initial start-up of an affected source, postmarked within 15 days after such date. If the affected source is permitted to burn multiple fuels, then the actual date of start-up, for each fuel, must be submitted and postmarked within 15 days after such date;
- iii. The sulfur content of the distillate oil combusted in an affected source shall not exceed 0.5 percent by weight. Within 30 days after each six-month period of the calendar year, the Permittee must submit in writing to the Regional Supervisor, DAQ, the sulfur content of the distillate oil combusted in an affected source. If fuel supplier certification is used to demonstrate compliance, fuel supplier certification shall include the following information:

A. The name of the oil supplier;

B. A statement from the oil supplier that the oil complies with the specification under the definition of distillate oil in 40 CFR 60.41(c); and

C. A certified statement signed by the owner or operator of an affected source that the records of fuel supplier certification submitted represent all of the fuel combusted during the reporting period.

b. NSPS Recordkeeping Requirements - In addition to any other recordkeeping requirements of the EPA, the Permittee is required to maintain records as follows:

- i. The amounts of each fuel combusted during each month; and

- ii. All records required under this section shall be maintained for a period of two years following the date of such record.
- c. NSPS Emissions Limitations - As required by 15A NCAC 2D .0524, the following permit limits shall not be exceeded:

Affected Source(s)	Pollutant	Emission Limit
No. 2 fuel oil-fired temporary boiler (86 million Btu per hour heat input) (TEMP-BOILER)	PM(TSP)	20% opacity
No. 2 fuel oil-fired temporary boiler (86 million Btu per hour heat input) (TEMP-BOILER)	SO2	0.5% by weight sulfur content

7. 15A NCAC 2D .0524 "NEW SOURCE PERFORMANCE STANDARDS" - For the following equipment, The Permittee shall comply with all applicable provisions, including the notification, testing, reporting, recordkeeping, and monitoring requirements contained in Environmental Management Commission Standard 15A NCAC 2D .0524 "New Source Performance Standards" (NSPS) as promulgated in 40 CFR 60, Subpart indicated below, and including Subpart A "General Provisions."

Emission Source(s)	Regulation
1. Generators for which construction* that commences after July 11, 2005 and are: (i) Manufactured after April 1, 2006 and are not fire pump engines, or (ii) Manufactured as a certified National Fire Protection Association (NFPA) fire pump engine after July 1, 2006. 2. Generators that are modified or reconstructed after July 11, 2005.	Subpart IIII - Standards of Performance for Stationary Compression Ignition Internal Combustion Engines

*For the purposes of applicability to this subpart, the date that construction commences is the date the engine is ordered by the owner or operator.

8. NOTIFICATION REQUIREMENT - As required by 15A NCAC 2D .0535, the Permittee of a source of excess emissions that last for more than four hours and that results from a malfunction, a breakdown of process or control equipment or any other abnormal conditions, shall:
- a. Notify the Director or his designee of any such occurrence by 9:00 a.m. Eastern time of the Division's next business day of becoming aware of the occurrence and describe:
 - ii. the name and location of the facility,
 - iii. the nature and cause of the malfunction or breakdown,
 - iv. the time when the malfunction or breakdown is first observed,

- v. the expected duration, and
 - vi. an estimated rate of emissions.
- b. Notify the Director or his designee immediately when the corrective measures have been accomplished.

This reporting requirement does not allow the operation of the facility in excess of Environmental Management Commission Regulations.

9. LIMITATION TO AVOID 15A NCAC 2Q .0501 - Pursuant to 15A NCAC 2Q .0315 "Synthetic Minor Facilities," to avoid the applicability of 15A NCAC 2Q .0501 "Purpose of Section and Requirement for a Permit," as requested by the Permittee, facility-wide emissions shall be less than the following:

Pollutant	Emission Limit (Tons per consecutive 12-month period)
SO ₂	100
NO _x	100

- a. Operations Restrictions - To ensure emissions do not exceed the limitations above, the following restrictions shall apply:
- i. the No. 2 fuel oil usage in the boilers shall be less than 1,045,000 gallons per consecutive 12-month period.
 - ii. the No. 2 fuel oil usage in the emergency generators shall be less than 342,000 gallons per consecutive 12-month period; and
 - iii. the No. 2 fuel oil usage in the compressors shall be less than 43,000 gallons per consecutive 12-month period.
- b. Recordkeeping Requirements - The Permittee shall record monthly and total monthly (for the previous 12 months) the following:
- i. the gallons of No. 2 fuel oil combusted by the boilers, generators, and compressors individually.
 - ii. Fuel supplier certification shall be kept on-site and made available to DAQ personnel upon request.
- c. Reporting Requirements - Within 30 days after each calendar year quarter, regardless of the actual emissions, the Permittee shall submit the following:
- i. emissions and/or operational data listed below. The data should include monthly and 12 month totals for the previous 14 months. The data must be calculated for each of the three 12 month periods over the previous 14 months.

1. the gallons of No. 2 fuel oil combusted by the boilers, generators, and compressors.
2. the sulfur dioxide and nitrogen oxide emissions.

10. LIMITATION TO AVOID 15A NCAC 2D .0530 "PREVENTION OF SIGNIFICANT DETERIORATION" - In accordance with 15A NCAC 2Q .0317, to comply with this permit and avoid the applicability of 15A NCAC 2D .0530 "Prevention of Significant Deterioration," as requested by the Permittee, emissions shall be limited as follows:

Affected Source(s)	Pollutant	Emission Limit (Tons Per Consecutive 12-month Period)
Facility Wide	SO2	250

B. GENERAL CONDITIONS AND LIMITATIONS

1. TWO COPIES OF ALL DOCUMENTS, REPORTS, TEST DATA, MONITORING DATA, NOTIFICATIONS, REQUESTS FOR RENEWAL, AND ANY OTHER INFORMATION REQUIRED BY THIS PERMIT shall be submitted to the:

Regional Air Quality Supervisor
 North Carolina Division of Air Quality
 Raleigh Regional Office
 3800 Barrett Drive
 Raleigh, NC 27609
 (919) 791-4200

2. RECORDS RETENTION REQUIREMENT - Any records required by the conditions of this permit shall be kept on site and made available to DAQ personnel for inspection upon request. These records shall be maintained in a form suitable and readily available for expeditious inspection and review. These records must be kept on site for a minimum of 2 years, unless another time period is otherwise specified.
3. PERMIT RENEWAL REQUIREMENT - The Permittee, at least 90 days prior to the expiration date of this permit, shall request permit renewal by letter in accordance with 15A NCAC 2Q .0304(d) and (f). Pursuant to 15A NCAC 2Q .0203(i), no permit application fee is required for renewal of an existing air permit. The renewal request should be submitted to the Regional Supervisor, DAQ.
4. ANNUAL FEE PAYMENT - Pursuant to 15A NCAC 2Q .0203(a), the Permittee shall pay the annual permit fee within 30 days of being billed by the DAQ. Failure to pay the fee in a timely manner will cause the DAQ to initiate action to revoke the permit.
5. EQUIPMENT RELOCATION - A new air permit shall be obtained by the Permittee prior to establishing, building, erecting, using, or operating the emission sources or air cleaning equipment at a site or location not specified in this permit.

6. This permit is subject to revocation or modification by the DAQ upon a determination that information contained in the application or presented in the support thereof is incorrect, conditions under which this permit was granted have changed, or violations of conditions contained in this permit have occurred. The facility shall be properly operated and maintained at all times in a manner that will effect an overall reduction in air pollution. Unless otherwise specified by this permit, no emission source may be operated without the concurrent operation of its associated air cleaning device(s) and appurtenances.
7. REPORTING REQUIREMENT - Any of the following that would result in previously unpermitted, new, or increased emissions must be reported to the Regional Supervisor, DAQ:
 - a. changes in the information submitted in the application regarding facility emissions;
 - b. changes that modify equipment or processes of existing permitted facilities; or
 - c. changes in the quantity or quality of materials processed.

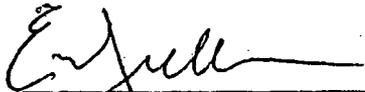

If appropriate, modifications to the permit may then be made by the DAQ to reflect any necessary changes in the permit conditions. In no case are any new or increased emissions allowed that will cause a violation of the emission limitations specified herein.

8. This permit is nontransferable by the Permittee. Future owners and operators must obtain a new air permit from the DAQ.
9. This issuance of this permit in no way absolves the Permittee of liability for any potential civil penalties which may be assessed for violations of State law which have occurred prior to the effective date of this permit.
10. This permit does not relieve the Permittee of the responsibility of complying with all applicable requirements of any Federal, State, or Local water quality or land quality control authority.
11. Reports on the operation and maintenance of the facility shall be submitted by the Permittee to the Regional Supervisor, DAQ at such intervals and in such form and detail as may be required by the DAQ. Information required in such reports may include, but is not limited to, process weight rates, firing rates, hours of operation, and preventive maintenance schedules.
12. A violation of any term or condition of this permit shall subject the Permittee to enforcement pursuant to G.S. 143-215.114A, 143-215.114B, and 143-215.114C, including assessment of civil and/or criminal penalties.
13. Pursuant to North Carolina General Statute 143-215.3(a)(2), no person shall refuse entry or access to any authorized representative of the DAQ who requests entry or access for purposes of inspection, and who presents appropriate credentials, nor shall any person obstruct, hamper, or interfere with any such representative while in the process of carrying out his official duties. Refusal of entry or access may constitute grounds for permit revocation and assessment of civil penalties.

14. The Permittee must comply with any applicable Federal, State, or Local requirements governing the handling, disposal, or incineration of hazardous, solid, or medical wastes, including the Resource Conservation and Recovery Act (RCRA) administered by the Division of Waste Management.
15. PERMIT RETENTION REQUIREMENT - The Permittee shall retain a current copy of the air permit at the site. The Permittee must make available to personnel of the DAQ, upon request, the current copy of the air permit for the site.
16. CLEAN AIR ACT SECTION 112(r) REQUIREMENTS - Pursuant to 40 CFR Part 68 "Accidental Release Prevention Requirements: Risk Management Programs Under the Clean Air Act, Section 112(r)," if the Permittee is required to develop and register a risk management plan pursuant to Section 112(r) of the Federal Clean Air Act, then the Permittee is required to register this plan in accordance with 40 CFR Part 68.
17. PREVENTION OF ACCIDENTAL RELEASES - GENERAL DUTY - Pursuant to Title I Part A Section 112(r)(1) of the Clean Air Act "Hazardous Air Pollutants - Prevention of Accidental Releases - Purpose and General Duty," although a risk management plan may not be required, if the Permittee produces, processes, handles, or stores any amount of a listed hazardous substance, the Permittee has a general duty to take such steps as are necessary to prevent the accidental release of such substance and to minimize the consequences of any release. **This condition is federally-enforceable only.**

Permit issued this the 21st of March, 2007.

-
1. Because an activity is exempted from being required to have a permit or permit modification does not mean that the activity is exempted from an applicable requirement or that the owner or operator of the source is exempted from demonstrating compliance with any applicable requirement.
 2. When applicable, emissions from stationary source activities identified above shall be included in determining compliance with the permit requirements for toxic air pollutants under 15A NCAC 2D .1100 "Control of Toxic Air Pollutants" or 2Q .0711 "Emission Rates Requiring a Permit."

PART VI
ANNUAL ADMINISTERING AND COMPLIANCE MONITORING FEE REQUIREMENTS

I. Fee Requirements

The permittee must pay the annual administering and compliance monitoring fee within 30 (thirty) days after being billed by the Division. Failure to pay the fee in a timely manner in accordance with 15A NCAC 2H .0105(b)(4) may cause this Division to initiate action to revoke the permit.

2003 NORTH CAROLINA HAZARDOUS WASTE MINIMIZATION QUESTIONNAIRE

As a Small Quantity Generator who is required to pay a fee, you are also required to submit a written description of any program to minimize or reduce the volume and quantity or toxicity of such waste. This questionnaire is required by G.S. 130A-294(k).

Facility Name	EPA ID Number
Harris Nuclear Plant	NCD 991278284

1. Has your facility (company) implemented and/or continued waste minimization strategies on hazardous waste produced between January 1, 2003 and December 31, 2003. (Circle one)

YES NO

➔ If your answer to question 1 is YES, then continue. If your answer is NO, then skip to question 3.

2. Circle a waste minimization strategy(s) that best describes your effort in minimizing your hazardous waste streams. (circle a letter)

<u>STRATEGY</u>	<u>EXAMPLES</u>
<input checked="" type="radio"/> A. Chemical Substitution	Replacing hazardous materials with non, or less hazardous items
<input type="radio"/> B. Volume Reduction	Using a filter press, reduce amount of sludge/waste
<input type="radio"/> C. On-site Recycling	Using a still to recover solvents
<input checked="" type="radio"/> D. Good Housekeeping	Monitoring processes for leaks or spills
<input checked="" type="radio"/> E. Off-site Recycling	Contracting with a service company to recycle
<input type="radio"/> F. Other	Describe below

3. Circle the primary one obstacle that prevented you from minimizing your waste between January 1, 2003 and December 31, 2003. (circle a letter)

- A. Insufficient capital to install new equipment
 B. Lack of technical information on waste reduction
 C. Not economically feasible
 D. Concern that product quality may decline
 E. Technical limitations of production process
 F. Regulatory burdens inhibit recycling
 G. Other (explain below) _____

4. Who provides you with the MOST information you need concerning hazardous waste management and minimization? (circle a letter)

- A. NC Hazardous Waste Section (HWS)
 - B. Division of Pollution Prevention and Environmental Assistant (DPPEA)
 - C. My corporate office
 - D. My hazardous waste vendor or service pick-up company
 - E. Environmental consultant
 - F. Internet resource on the web (specify: _____)
 - G. No one, I do it on my own
 - H. Other resource (explain below)
-
-

5. How can the Hazardous Waste Section assist you in complying with the NC hazardous waste management rules? (circle a letter)

- A. Request a technical assistance site visit to my facility
 - B. Consultation via telephone with the Section (tel. 919-733-2178)
 - C. Information provided on the Section's Web (<http://wastenot.enr.state.nc.us/>)
 - D. Via letter requesting clarifications of certain aspects of the rules
 - E. Access to publications or updates about the rules
 - F. I confidently know the rules, I do not need any assistance
 - G. Other (explain below)
-
-

- Questions about the Questionnaire contact the Technical Resource Unit:
Ann Preston at 919-733-2178, extension 230
Ann.preston@ncmail.net, or
Doug Roberts at 919-733-2178, extension 233
Doug.roberts@ncmail.net, or

REMIT To: N.C. Hazardous Waste Section
Attn: Larry Wilson
1646 Mail Service Center
Raleigh, NC 27699-1646

PLEASE RETURN THIS PORTION WITH PAYMENT

A. Fee Requirements: Pursuant to North Carolina General Statutes 130A-294.1 you are required to pay fees based on your hazardous waste management activities. These fees are used to support government programs that ensure the safe management of hazardous waste. Failure to pay the required hazardous waste fee by **December 17, 2004** could result in an enforcement action with additional penalties.

B. Explanation of Invoice Amount:

CATEGORY	FEE	FACILITY STATUS	AMOUNT DUE
Generator Fee	\$ 125.00	SQG	\$ 125.00
Treater	\$ 1,200.00	-	\$ 0.00
Storer	\$ 1,200.00	-	\$ 0.00
Land Disposal	\$ 1,200.00	-	\$ 0.00
Transporter	\$ 600.00	-	\$ 0.00
Amount Past Due			\$ 0.00
Waste Generation	\$ 0.50/Ton	0 tons	\$ 0.00
TOTAL AMOUNT DUE			\$ 125.00

C. Who is Required to Pay?

The following are required to pay fees associated with hazardous waste management.

- Large Quantity Generator (\$1,000.00):** A person who generates one kilogram or more of acute hazardous waste or 1,000 kilogram or more of hazardous waste in any calendar month during the year beginning July 1 and ending June 30. (Note: Large Quantity Generators are also required to pay an additional fee of \$0.50 per ton, or any part thereof, for hazardous waste generated during the period January 1 to December 31, up to a maximum of 25,000 tons.)
- Small Quantity Generator (\$125.00):** A person who generates 100 kilogram or more of hazardous waste in any calendar month during the year beginning July 1 and ending June 30 but less than 1,000 kilogram of hazardous waste in each calendar month during that year.
- Transporter (\$600.00):** A person who transports hazardous waste shall pay an annual fee.
- Treater, Storer or Disposer (\$1,200.00):** A treatment, storage, or disposal facility shall pay an annual activity fee for each activity. (Note: A commercial hazardous waste storage, treatment, or disposal facility also required to pay an additional fee of \$1.75 per ton, or any part thereof of hazardous waste stored, treated, or disposed of at the facility.)

D. Verify Contact Information: Please verify Company's information below, make any corrections and sign below.

Response to RAI No. 1
Item 10

Facility: <u>Harris Nuclear Plant</u>	Reporting Period: <u>2004</u>
Facility Contact: <u>Bob Wilson</u>	Voicenet: <u>751-2444</u>

A. Solid Waste Disposal Costs

Most facilities contract with a waste hauler for the lease of one or more dumpsters and the service of hauling the dumpster to the local landfill. The facility may also be charged tipping fees by the landfill. Disposal costs can be reduced by reducing the number of dumpsters, reducing the size of the dumpster, reducing the number of times the dumpster is hauled to the landfill, and by reducing the volume of material that is discarded.

Number of dumpsters on site	Waste Hauler	<u>Waste Industries</u>
	Telephone	<u>919-662-7100</u>
<u>Varies</u>		

Container Capacity ¹	Monthly Lease Charge ¹	Hauling Fees ² (Trips/Month)	Landfill Tipping Fee ³	Total Monthly Cost
1. 8 CY	\$ 415	\$ 85 ()	\$ 0	\$ 500
2. 30 CY	\$ 415	\$ 148 ()	\$ 150	\$ 713
3. 40 CY	\$ 415	\$ 148 ()	\$ 150	\$ 713
4.	\$	\$ ()	\$	\$
5.	\$	\$ ()	\$	\$

1. Typical containers are the 8 yd³ dumpster, which is emptied into the waste hauler's truck, and the 30 yd³ container (either open top or compactor), which is hauled directly to the landfill. More frequent emptying of the smaller container may be more cost effective than the larger container.
2. Waste haulers charge each time a dumpster is emptied. Regularly scheduled service of a partially filled container will cost more than calling the contractor for service when the container is nearly full. Discarding bulky items, such as empty cardboard boxes, will increase disposal costs. Recycling or reusing discarded items will decrease disposal costs.
3. Waste haulers pay a tipping fee to dispose of trash at the landfill. Recycling discarded items or using other waste reduction techniques to eliminate waste generation can reduce the volume of waste generated each month.

B. Hazardous Waste Disposal

Amount Generated	Disposal Cost
<u>1071</u>	<u>See chemical copst</u>

C. Waste Minimization Programs

Indicate recycling/waste minimization programs being conducted at this facility. Provide an estimate of the number, pounds, or gallons for those materials **not** sent to the Materials Service Center during the quarter.

Materials	Amount/Volume	Cost
Aluminum cans	2000-3000 lbs	02/04/05
Antifreeze (gallons)	100 gallons	CDC
Batteries	6000-7000 lbs	see recycling cost
Alkaline	See Batteries	0
Lead-acid	See Batteries	0
Lithium	See Batteries	0
Ni-cad	See Batteries	0
Other		
Cardboard	300-400 CY	5000
Chemicals	Not Tracked	29000
Drums	Not Tracked	0
Glass	Not Tracked	0
Industrial rags (laundered)	N/A	0
Oil	N/A	0
On-site (burned for energy recovery)	N/A	
Off-site (Noble)	Shamrock ~21000 gallons	see chemical cost
Oil filters	Not Tracked	see chemicals
Paper	5000-6000 yds	see solid waste p 1
Plastic	Not Tracked	0
Printer cartridges /ribbons	400-500	0
Scrap metal	50000-70000 lbs	sold for profit
Wood	12-15 tons	see recycling cost
Pallets	Processed with wood	0
Poles	N/A	0
Treated wood (cross ties and cross arms)	Removed by contractor	0
Other (list) Lighting	5000-6000 lamps	0

Comments: Numbers are based on contract invoices and historical data.

Recycling cost = \$3500

1.0 PURPOSE

Provide guidance necessary to manage the disposal of surplus chemicals, hazardous and nonhazardous wastes in accordance with corporate, state, and federal environmental regulations. Hazardous wastes are controlled by the Resource Conservation and Recovery Act (RCRA) requirements from the time the wastes are generated through handling, storage, and transportation to a treatment/disposal facility.

3.0 DEFINITIONS / ABBREVIATIONS

3.1 Definitions

1. Hazardous Waste - A solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical or chemical characteristics may (1) cause or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness; or (2) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed. See 40CFR261.2-261.4.
2. Wake County Warning Point - The 24-hour point of contact is defined in the HNP Emergency Plan (PLP-201) for activating a hazardous waste emergency response team (HAZMAT) in Wake County, North Carolina.
3. Surplus Chemical - Chemical having an expired shelf life or any chemical deemed unwanted.
4. Generator - Facility that produces a hazardous waste identified or listed in 40CFR261.
5. Transporter - Person or contractor engaged in the off site transportation of hazardous waste by air, rail, highway, or water.
6. TSD Facility - Facility in business of hazardous waste treatment, storage, or disposal.

3.2 Abbreviations

1. ARF - Authorization Request Form
2. EPA - United States Environmental Protection Agency
3. ESS - Corporate Environmental Services Section
4. HWC - Hazardous Waste Coordinator
5. LQG - Large Quantity Generator
6. M&CS - Material and Contract Services
7. MSC - Materials Service Center
8. MSDS - Material Safety Data Sheet
9. NRC - Nuclear Regulatory Commission
10. RCRA - Resource Conservation and Recovery Act
11. SQG - Small Quantity Generator
12. TSD - Treatment, Storage, and Disposal Facility

4.0 GENERAL

R 4.1 Waste Minimization and Segregation (40CFR262.41)

Nonhazardous wastes should never be mixed with potential hazardous wastes and waste volumes generated should be minimized to the fullest extent possible. The EPA requires, as part of the hazardous waste annual reports by hazardous waste generators, that descriptions of efforts made to reduce the volume and toxicity of hazardous waste by the facility be included. Careful hazardous waste segregation practices and other methods to minimize hazardous waste generation will help the Company meet this requirement as well as reduce hazardous waste disposal costs and liabilities.

R 4.2 Used Oil (40CFR279)

The Company currently uses used oil recyclers to dispose of used oil. If the oil contains any hazardous or toxic chemicals, the recycler will not remove the oil and may be hesitant to remove any oil if it contains any foreign substance, even water. Therefore, Used Oil must be kept separate from other wastes such as solvents and paints. **In North Carolina, used oil is not classified as a hazardous waste and is regulated only as a solid waste.**

R 4.3 Waste Solvents and Paints (40CFR261)

Spent varsol, xylene, toluene, acetone, and methyl-ethyl-ketone shall be kept separate from other hazardous waste; such as, halogenated solvents. Paint wastes must also be segregated from these spent solvents. Waste paint collection drums are available in designated satellite storage areas for collecting waste paints and related paint cleaning solvents.

R 4.4 Mixed Wastes (40CFR266)

Any hazardous waste that becomes contaminated with radioactivity is regulated by both the Environmental Protection Agency and the Nuclear Regulatory Commission and is classified as a mixed waste. These wastes will have to be handled, stored, and disposed of in accordance with NRC regulations.

5.0 IMPLEMENTATION

5.1 Responsibilities

5.1.1 General Manager - Harris Plant

The General Manager – Harris Plant is responsible for providing the resources necessary to implement the provisions of this procedure.

5.1.2 Superintendent - Environmental & Chemistry

1. Appoint a Hazardous Waste Coordinator (HWC) and an alternate Hazardous Waste Coordinator.
2. Administer the Hazardous Waste Management Program.

5.1.3 Material & Contract Services

1. Provide arrangements for transportation of material when requested by the Hazardous Waste Coordinator.
2. Provide assistance to the Environmental Coordinator to ensure any material shipped is prepared in accordance with DOT regulations.
3. Coordinate with the Environmental Coordinator for the storage of surplus chemicals.

5.1.4 Maintenance

1. Assist in the collection, consolidation, and preparation of wastes for off site shipments.
2. Transport waste and surplus chemicals to designated storage areas.
3. Label chemical waste containers at the direction of the Hazardous Waste Coordinator.
4. Construct special shipping crates, as required, for shipment of waste chemicals.
5. Maintain the Hazardous Waste Storage Facility and satellite storage areas.
6. Identify to the Hazardous Waste Coordinator maintenance activities that will generate oil, or chemicals.

R 5.1.5 Licensing / Regulatory Programs

1. Assist in the preparation of regulatory-required documents. (40CFR260-272)
2. Distribute copies of regulatory documents.

5.1.6 Hazardous Waste Coordinator

- R 1. Ensure hazardous waste manifests (40CFR262.20) are prepared for all waste shipments.
- R 2. Ensure correct loading of hazardous waste transporters for hazardous waste shipments (49CFR172).
- R 3. Ensure completion of weekly inspections of the hazardous waste central storage areas (40CFR265.174).
- R 4. Supply required information to the Environmental Service Section for preparation of regulatory reports (40CFR262.41).
- R 5. Maintain awareness of RCRA regulations (40CFR262.34).
- R 6. Act as the emergency coordinator during a hazardous waste emergency.
- R 7. Maintain hazardous waste documents, manifests, and reports (40CFR259-265).
8. Assist Maintenance and Engineering in the identification, storage, and disposal of waste solvents, oils, and chemicals.

5.1.7 Environmental Services Section

1. Make required notification to local, state, and federal agencies, as necessary.
2. Provide technical support to the HNP Hazardous Waste Coordinator.
3. Assist in the preparation of required reports to government agencies.
4. Assist in the monitoring of the HNP Hazardous Waste Management Program to ensure compliance with appropriate regulations.

5.1.8 Progress Energy Hazardous Waste Materials Contract Coordinator

1. Administer contracts for the disposal of hazardous waste by qualified waste contractors.
2. Assist in the recycling, sale, or disposal of bulk chemicals and Used Oil.

5.1.9 HNP Engineering

Identify to the Hazardous Waste Coordinator any contractor/vendor activities that will generate waste solvents, oil, or chemicals.

5.1.10 Operations

- R 1. Provide initial coordination for a hazardous waste emergency (40CFR265).
2. Identify to the Hazardous Waste Coordinator any activities that will generate waste solvents, oils, or chemicals.
- R 3. Perform all required notifications as described by PLP-500 or other plant procedures.

5.1.11 Harris Training Section

- R 1. Provide and document hazardous waste training to plant personnel who are involved in hazardous waste operations (40CFR262).
- R 2. Ensure that one instructor maintains awareness of the HNP Hazardous Waste Program and is available to provide the required training as requested by HNP organizations.

5.2 Procedure

5.2.1 Surplus or Reusable Materials

The Materials Service Center (MSC) will accept surplus and reusable materials that can be used at other Progress Energy facilities or can be sold as surplus. Only unopened and bulk amounts of chemicals will be accepted by MSC.

1. Material and Contract Services will contact the Materials Service Center (MSC) and provide the necessary information (MSDS) for determining if the material is acceptable for reuse or can be sold.
2. If material is acceptable to MSC, Material and Contract Services will be responsible for properly preparing the material for shipment.
3. Some surplus items (paint, WD-40, empty drums, etc.) may be sold to HNP employees at sales conducted by Material and Contract Services. Other items may be sold directly to other vendors directly by HNP Material and Contract Services.
4. If the material cannot be reused or sold as surplus, Chemistry will classify the material as a solid waste or a hazardous waste.
5. After the waste material is classified, Chemistry will make the necessary arrangements for disposal.

5.2.2 Solid Waste Determination

NOTE: Attachment 1, Hazardous Waste Determination, can be used with Sections 5.2.2 and 5.2.3 to determine if waste material is a solid waste or a hazardous waste according to EPA guidelines.

- R 1. Before any waste can be classified as hazardous, the waste must be defined as a solid waste. Solid waste can be physically solid, liquid, a semisolid, or a contained gas under pressure. It is any discarded material that is abandoned, recycled in certain ways, or considered "inherently waste-like." (40CFR261 Subparts A, B, and C)
- R 2. If the material meets any one of these following criteria, then material is classified as a solid waste:
- a. Materials are solid waste if abandoned by being:
 - (1) Disposed of, or
 - (2) Burned or incinerated, or
 - (3) Accumulated, stored, or treated (but not recycled) before or in lieu of being abandoned by being disposed of, burned, or incinerated.
 - b. Materials are solid wastes if they are recycled by being:
 - (1) Used in a manner constituting disposal, or
 - (2) Burned for energy recovery or used to produce a fuel or found in a fuel, or
 - (3) Reclaimed (regenerated or recovered in ways such as solvent distillation), or
 - (4) Accumulated speculatively, see Table 1 in 40CFR261.2.
 - c. Certain solid wastes are defined as inherently waste-like. These include chlorinated dioxins and chlorinated dibenzofurens, which are F listed wastes (40CFR261.31).

5.2.3 Hazardous Waste Determination

1. Hazardous waste is a subset of solid wastes. Hazardous wastes are not to be confused with other items termed hazardous. Hazardous substances include all hazardous wastes as well as many nonwaste chemicals that may or may not pose a problem to the environment or human health if spilled or released.
- R 2. Certain wastes are listed for nonspecific sources; such as, the F wastes found in 40CFR261.31. Wastes from specific sources include the K wastes listed in 40CFR261.32, and discarded commercial chemical products in the part U listed wastes in 40CFR261.33.
- R 3. For wastes not listed in Subpart D (40CFR261.30), the waste may be a characteristic waste if the waste exhibits any one of the following characteristics:
 - a. Ignitability - A liquid with a closed cup flash point of less than 60°C (140°F) or if a solid is capable of causing a fire through friction, absorption of moisture, spontaneous combustion, or burns so vigorously as to cause a hazard. This is a D001 hazardous waste.
 - b. Corrosivity - An aqueous material that has a pH less than or equal to 2 or greater than or equal to 12.5, or a liquid that erodes steel at a rate greater than one-quarter inch per year at a constant temperature of 130°F is a D002 hazardous waste.
 - c. Reactivity - A solid waste is normally unstable and readily undergoes violent change, reacts violently or releases toxic gases when mixed with water, or the chemical has the ability to release toxic gases. If it is readily explosive or capable of detonation then it is a D003 hazardous waste.
 - d. Toxicity - A solid waste is hazardous if a representative sample of the waste contains any contaminate exceeding the limits specified in the laboratory extraction procedure required by 40CFR261. These are hazardous wastes D004 through D043.

5.2.4 Exclusions (40CFR261.4)

- R The following is a partial list of materials used at the Harris Plant that are not a solid waste and/or are not a hazardous waste. Consult 40CFR261.4 for the full list and details:
- Domestic sewage
 - Industrial waste water discharges subject to regulation under Section 402 of the Clean Water Act (NPDES Permit).
 - Used batteries (or used battery cells) returned to a battery manufacturer for regeneration or recycling.
 - Scrap metal returned to a recycler.
 - Discarded wood and wood or wood products treated with arsenic.
 - Intact fluorescent lamps, batteries, mercury switches and computer components processed by the Universal Waste Rules.

5.2.5 Packaging and Labeling Containers

- R 1. Packaging - All hazardous waste placed in storage must be in containers that are in good condition. Containers used in the transport of hazardous waste must meet DOT regulations outlined in 49CFR Part 172; which basically means the container is in "shipping condition." The drum or container must be compatible with the waste and must not be leaking or be in danger of leaking or rupturing. Any drum which does not meet these requirements should be replaced or the drum can be placed inside an "overpack" drum and surrounded with vermiculite or other absorbent material compatible with the waste (40CFR262.30).
2. Labeling (40CFR262.31)
- R a. All hazardous waste drums must display a hazardous waste label (Attachment 2). The waste generator's name and address, manifest document number, DOT and EPA waste descriptions, and the EPA identification number for the Harris Plant must be listed on the hazardous waste label (40CFR262.31).
- R b. Each drum must also display all "flammable," "corrosive," or other applicable labels as required by DOT regulations. Material and Contract Services personnel may be contacted for assistance in determining labeling requirements (40CFR262.32).
- c. The ARF number assigned to the waste by the TSD facility must be identified on the drum. The ARF number must appear on the drum top and side above the hazardous waste label. See Attachment 3 for locations of drum labels.
- R 3. Placarding - Normally, the hazardous waste transporter will provide the necessary placards for the truck as required by DOT regulations for transporting hazardous waste. However, the regulations require that the generator provide necessary placards if needed by the transporter (40CFR262.33).

5.2.6 Storage Requirements

1. Chemical Processing Area - Surplus chemicals and empty containers should be taken to the chemical processing area located west of the paint shop for evaluation for disposal.
- a. Aerosol cans, small containers should be placed in the cabinets in the area. All other containers should be located on a spill pallet provided in the area.
- b. Used oil should be transferred into the used oil tank if the container is less than a 55 gallon drum. The empty completely drained container should be disposed of a solid waste or the container may be reused for Used Oil in the future.
2. Satellite Accumulation Areas
- R EPA provides for satellite storage areas for the collection of hazardous waste at the point of waste generation and is under the control of the Operator. The following requirements are placed on the satellite accumulation of hazardous waste (40CFR262.34):
- a. Accumulation is limited to less than 55 gallons of waste without any time constraints. Only one quart of acutely hazardous waste, as defined in 40CFR261.33, can be accumulated at any time.
- b. Containers must be in good condition and compatible with the waste.
- c. Containers must be kept closed except when adding or removing wastes.
- d. Containers are not handled in a way that will cause a leak.
- e. Containers are marked with words Hazardous Waste or other words to identify the contents.
- f. When container is full, seal and date drum.
- R g. After the container is full, the waste shall be moved to the Central Storage Facility within 3 days (40CFR262.34).

5.2.6 Storage Requirements

3. Central Storage

- R a. All drums placed in a central storage facility must be in shipping condition with all necessary labels attached at the time of shipment (see Section 5.2.5.1).
- R b. Hazardous waste shall be shipped off site to a TSD facility within 180 days (40CFR262.34). If the 180 day limit is expected to be exceeded, the Environmental Services Section shall contact the state of North Carolina for an extension and reporting requirements.
- c. The central hazardous waste storage facility should meet the following criteria:
- Controlled access area to prevent unmarked, unlabeled drums or barrels from being placed in the storage area.
 - Some form of secondary containment should be employed to control possible spills and leakage.
 - The area should be covered to prevent rain water associated problems.
 - Drums should be elevated (pallets, and so forth) or placed on a slanted floor to provide drainage to prevent drums from standing in liquid spillage or leakage.
 - The area should be clearly posted as a hazardous waste storage area, with name of person to contact for access to the area.
 - Floor should be constructed of an impervious material, such as concrete.
 - Have a spill kit and fire equipment available in the immediate area.
 - Good housekeeping shall be maintained at all times. Spills and free standing water should be removed as soon as possible.
 - Additional or temporary Central Storage Areas may be designed as needed (ex. Movement of drums to Receiving the day before shipment, outage activities).

R 5.2.7 Hazardous Waste Manifests (40CFR262.20-262.23, 262.40, 263.20-263.21)

1. All hazardous waste shipments must be documented on a hazardous waste manifest. Attachment 4 shows an example of a Hazardous Waste Manifest.
2. Some states have legislation requiring the use of that state's manifest form if the waste is disposed in that state (South Carolina, New Jersey, and Pennsylvania.) North Carolina will accept the use of other state manifest forms if the waste is disposed in another state. Select the appropriate manifest in the following order:
 - a. Manifest from the TSD host state.
 - b. Generator's state manifest.
 - c. EPA uniform hazardous waste manifest.
3. If additional information is needed, contact ESS, a Progress Energy Hazardous Waste Coordinator or the TSD facility.

5.2.7 Hazardous Waste Manifests (40CFR262.20-262.21, 262.40, 263.20-263.21) (continued)

- R 3. After completing the manifest, a trained (EPA and DOT) representative for the generator must sign the manifest. The transporter must also sign the manifest. At a minimum, four (4) copies of the manifest must be distributed:
- One copy for the generator.
 - One or more copies for each transporter.
 - Two copies for the TSD facility, one copy for the TSD facility's records; a second copy that the TSD facility must fully complete and return to the generator.
 - Additional copies may be necessary if the state in which the generator TSD facility is located requires the generator and the TSD facility to submit a copy to the state.
- R 4. Upon receipt of the waste, the TSD facility is required to sign the manifest and return a copy to the generator. A copy of each shipping manifest must be kept by the generator until the signed manifest is returned from the TSD facility. The completed manifest shall be kept a minimum of three years per the regulations.
- R 5. If the plant does not receive a copy of the manifest from the TSD facility within 35 days from the date the waste was accepted by the transporter (waste shipment date), contact the transporter and TSD facility to determine status of the waste. Also, contact the Environmental Services Section. If a copy of the manifest is not returned to the generator within 45 days of the initial pick up date, the plant shall prepare an EPA Exception Report (40CFR262.42).

R 5.2.8 Land Disposal Restriction Certification

In addition to providing a hazardous waste manifest for each hazardous waste shipment, a land disposal restriction certification is required (40CFR268) to be on file at the TSD for each waste stream shipped. Attachment 5 is an example of a land ban restriction form. The TSD facility can provide necessary paperwork and instructions for completing the forms additional certifications may be required by the receiving state or TSD.

R 5.2.9 Hazardous Waste Authorization Request Form

Before a TSD facility will accept any waste for disposal, the TSDs Authorization Request Form (ARF) must be submitted and approved by the disposal facility. The TSD facility may require a sample of the waste to verify the waste. Wastes shipped to the TSD facility may be analyzed to ensure the waste chemistry meets the information submitted in the ARF. Approved ARFs must be maintained for at least five (5) years by HNP (40CFR268.7).

5.2.10 Environmental Services Section Contacts

Contacts for the Environmental Services Section are listed in EVC-SUBS-00018 as a web link to the Environmental Services Section Emergency Response page containing names, phone numbers and pager numbers.

R 5.2.11 Training (40CFR262.34, 265.16, 29CFR1910.1200)

1. Training is required for personnel (reference TRN-NGGC-0011):
- Handling hazardous wastes.
 - Preparing hazardous waste shipments.
 - Responsible for inspections.
 - Involved in RCRA record keeping or reporting.
 - Managing the hazardous waste program.
 - Training of hazardous waste personnel.

R 5.2.11 Training (40CFR262.34, 265.16, 29CFR1910.1200)

2. Chemistry, Health Physics, Maintenance, Material and Contract Services personnel shall complete this training if they work with hazardous material which may become a hazardous waste.
3. Contract on-site painters shall complete this training before being allowed to work alone.
4. Training records must be maintained for three years after the employee has left the facility. These records must include:
 - Employee name
 - Employee job class
 - Description of training

R 5.2.12 Preparedness and Prevention (40CFR265.30-265.37)

The Hazardous Waste Program is managed to minimize the possibility of a fire, explosion, or any unplanned sudden release of hazardous waste to the air, soil, or surface water which could threaten human health or the environment.

R 5.2.13 Reports and Record Keeping (40CFR262.40, 15 NCAC 13A.001(b)(3))

1. Waste Minimization Reports are required by the North Carolina Department of Environment and Natural Resources (NCDENR) when the annual hazard waste fees are invoiced and paid.

2. Manifests

- a. The Hazardous Waste Coordinator will maintain manifest records for all hazardous waste shipments.

- R
- b. Retain for three years a copy of the manifest signed by the initial transporter or a signed copy from the designated facility which received the waste (40CFR262.40).

R 3. Waste Analyses Records

Maintain records of any test results, waste analyses, or other determinations made on any waste for disposal for at least five years from the date the waste was last sent for disposal (40CFR262.40 and 40CFR268.7).

R 4. Training Records

- a. The Harris Training Section shall maintain all training records per procedure requirements.
- b. Record retention is required for at least three years after the employee has left the facility (40CFR265.16).

R 5. Inspections

CRC-001, Weekly Matrix Sheets are used to document the weekly central storage area inspections. Records and results of hazardous waste inspections shall be kept for at least three years from the date of inspection (40CFR262.40).

R 6. Exception Reporting

Maintain a copy of exception reports for a period of at least three years from the due date of report (40CFR262.40).

5.2.14 Inspections (40CFR265.170-265.177)

- R
1. Hazardous waste containers stored in the central storage facility must be inspected weekly for leaks or deterioration, correct labeling, and ensure drums are tightly sealed.
 2. The inspection of the central storage facility should document building and dike condition, fence integrity, and condition of signs.
 3. Record the results of the inspections on the CRC-001 Weekly Matrix Sheet located in the E&C Tech Work Area (Waste Processing Building, Elevation 276).

5.2.15 Biological Waste

- R
1. All biological waste should be tagged or bagged as a biological hazard. (29CFR1910.1030)
 - R 2. All workers who could come in contact with biological hazards should comply with the requirements of the Bloodborne Pathogens standard (29CFR1910.1030)
 - R 3. All biological waste that is also non-radioactive should be taken to the In-processing Facility for disposal (15A NCAC 13B 1200).
 - R 4. All biological waste that can not be released from a Radiation Control Area should be marked as a Biological Hazard and disposed of by the radwaste disposal contractor (15A NCAC 13B 1200).

STATE OF SOUTH CAROLINA INSTRUCTIONS FOR UNIFORM HAZARDOUS WASTE MANIFEST
These Instructions Must Accompany Each "Original" Manifest

IMPORTANT: TYPE [on a 12-pitch (elite) typewriter] OR USE FIRM POINT PEN - PRESS DOWN HARD

ALL COPIES MUST BE LEGIBLE!

GENERAL INFORMATION: Federal Regulations require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, or disposal facilities to use the U.S. EPA Form 8700-22 Rev. 9/88 [DHEC 1988 (REV 5/89)] and, if necessary, the continuation sheet U.S. EPA Form 8700-22A Rev. 9/88 (DHEC 1988A) (REV. 5/89) for both inter-state and intra-state transportation. Transporters who transport hazardous waste into the United States from another country are responsible for completing the manifest. Federal and State regulations also require generators and transporters of hazardous waste and owners or operators of hazardous waste treatment, storage, or disposal facilities to complete the following information.

GENERATOR SECTION

1. Generator's U.S. EPA ID Number - Manifest Document Number: Enter the generator's U.S. EPA twelve digit identification number and the unique five digit number assigned to this manifest by the generator beginning with 00001. If your company does not have a U.S. EPA Identification Number, please contact S.C. DHEC at (803) 734-5200 about obtaining an identification number.
2. Page 1 of: Enter the total number of pages used to complete this manifest, i.e., the first page EPA Form 8700-22 Rev. 9/88 [DHEC 1988 (REV 5/89)] plus the number of continuation sheets EPA Form 8700-22 Rev. 9/88A (DHEC 1988A) (REV. 5/89) if any.
- A. State Manifest Document Number: Leave blank.
- B. State Generator Identification Number: Leave blank.
3. Generator's Name and Mailing Address: Enter the name and mailing address of the generator who will manage the returned manifest forms.
4. Generator's Phone Number: Enter a telephone number with area code where an authorized agent of the generator can be reached in the event of an emergency including nights, weekends, and holidays.
5. Transport 1 Company Name: Enter the company name of the first transporter who will transport the waste.
6. U.S. EPA ID Number: Enter the U.S. EPA twelve digit identification number of the first transporter identified in item 5.
- C. State Transporter's ID Number: Leave blank.
- D. Transporter's Phone Number: Enter a telephone number including area code where an authorized agent of the first transporter can be reached in the event of an emergency including nights, weekends, and holidays.
7. Transporter 2 Company Name: If applicable, enter the company name of the second transporter who will transport the waste. If more than 2 transporters will be used, use a U.S. EPA Form 8700-22A Rev. 9/88 (DHEC 1988A) (REV. 5/89) continuation sheet and list the transporters in the order they will be transporting the waste.
8. U.S. EPA ID Number: If applicable, enter the U.S. EPA twelve digit ID number of the second transporter identified in item 7.
- E. State Transporter's ID Number: Leave blank.
- F. Transporter's Phone Number: Enter a telephone number including area code where an authorized agent of the second transporter can be reached in the event of an emergency including nights, weekends, and holidays.
9. Designated Facility Name and Site Address: Enter the company name and site address of the treatment, storage, or disposal facility designated to receive the waste listed on this manifest. The address must be the site address, which may differ from the mailing address.
10. U.S. EPA ID Number: Enter the U.S. EPA twelve digit identification number of the designated treatment, storage, or disposal facility identified in item 9.
- G. State Facility's ID Number: Leave blank.
- H. Facility's Phone Number: Enter a telephone number including area code where an authorized agent of the facility can be reached in the event of an emergency including nights, weekends, and holidays.
11. U.S. DOT Descriptions: Enter proper shipping name, hazard class and ID Number (UN/NA) for each waste as identified in 49 CFR 171-177. If additional space is needed, use a U.S. EPA Form 8700-22A Rev. 9/88 (DHEC 1988A) (REV. 5/89) Continuation Sheet.
12. Containers (no. and type): Enter number of containers for each waste and the appropriate abbreviation from Table I (below) for the type of containers.

TABLE I

DM = Metal drums, barrels, kegs	TT = Cargo tanks (tank trucks)	CM = Metal boxes, cartons, cases, roll offs
DW = Wooden drums, barrels, kegs	TC = Tank cars	CW = Wooden boxes, cartons, cases
DF = Fiberboard or plastic drums, barrels, kegs	DT = Dump truck	CF = Fiber or plastic boxes, cartons, cases
TP = Tanks portable	CY = Cylinders	BA = Burlap, cloth, paper or plastic bags

13. Total Quantity: Enter total quantity of waste described on each line, relative to the units used in item 14.
14. Unit (weight/volume): Enter the appropriate abbreviations from Table II (below) for the unit of measure:

Table II

P = Pounds L = Liters K = Kilograms T = Tons M = Metric Tons N = Cubic Meters Y = Cubic Yards G = Gallons (liquid only)

- I. Waste Number: Enter hazardous waste numbers as specified in South Carolina Hazardous Waste Management Regulation R.61-79.261 Subparts C and D to identify the hazardous waste on each line.
- J. Additional Descriptions for Materials Listed Above: In the spaces provided, enter the authorization number (from the S.C. DHEC Authorization Request Form) for each waste stream listed in section 11 above. Note: Before any hazardous waste can be accepted for treatment, storage or disposal in South Carolina, the generator must obtain prior authorization from the treatment, storage or disposal facility.
- K. Handling Codes for Wastes Listed Above: Leave blank.
15. Special Handling Instructions and Additional Information: Generators may use this space to indicate special transportation, treatment, storage or disposal information or Bill of Lading information. For international shipments, generators must enter in this space the point of departure (city and state) for those shipments destined for treatment, storage, or disposal outside the jurisdiction of the United States.
16. Generator Certification: The generator must READ, SIGN (BY HAND IN INK), and DATE the certification statement. If a mode other than highway is used, the word "highway" should be lined out and the appropriate mode (rail, water, or air) inserted in the space below. If another mode in addition to the highway mode is used, enter the appropriate additional mode (e.g., and rail) in the space below.

TRANSPORTER SECTION

17. Transporter 1 Acknowledgement: Enter the name of the person accepting the waste on behalf of the first transporter. That person must acknowledge acceptance of the waste described on the manifest by signing (BY HAND IN INK) and entering the DATE of receipt.
18. Transporter 2 Acknowledgement: Enter, if applicable, the name of the person accepting the waste on behalf of the second transporter. That person must acknowledge acceptance of the waste described on the manifest by SIGNING (BY HAND IN INK) and entering the DATE of receipt.

FACILITY SECTION

19. Discrepancy Indication Space: The authorized representative of the designated facility's owner or operator must note in this space any discrepancy between the waste described on the manifest and the waste actually received at the facility. Owners and operators of facilities who cannot resolve significant discrepancies within 15 days receiving the waste must submit to the Department a letter with a copy of the manifest describing the discrepancy and attempts to reconcile it. The treatment, storage, or disposal facility must enter the actual weight of waste in pounds in the spaces provided if the amount varies any from that specified by the generator in item 13 or if the generator uses a unit of measure other than pounds.
20. Facility Owner or Operator Certification: Print or type the name of the person accepting the waste on behalf of the owner or operator of the facility. That person must acknowledge acceptance of the waste described on the manifest by SIGNING (BY HAND IN INK) and entering the DATE of receipt.

IF ASSISTANCE IS NEEDED IN COMPLETION OF THIS MANIFEST, CONTACT THE TREATMENT, STORAGE, OR DISPOSAL FACILITY DESIGNATED TO RECEIVE THE WASTE OR THE S.C. DHEC MANIFEST SECTION AT (803) 734-5200 WEEKDAYS FROM 8:00 am TO 5:00 pm.

LAND DISPOSAL RESTRICTION NOTIFICATION CERTIFICATION FORM

Generator Name: _____ Generator EPA ID Number: _____

Manifest Number: _____

The purpose of this form is to provide appropriate notification/certification, in accordance with the Land Disposal Restriction regulations set forth in 40 CFR Part 268, to the treatment, storage or disposal facility which receives the waste referenced below. In accordance with the waste analysis and recordkeeping requirements specified in 40 CFR 268.7, I have indicated below the relevant information required to properly manage my waste(s) in compliance with the Land Disposal Restriction treatment standards found in 40 CFR 268 and any applicable prohibition levels set forth in 40 CFR 268.32 or RCRA section 3004(d).

Approval/Lab Code	Manifest Line # (e.g. 1104, 1100)	W-W	N-W	List the EPA Waste Codes, Subcategories and/or Constituent(s) of Concern	UHCs* (Y or N)	Classification Group

W-W - Wastewater

N-W - Non-Wastewater

* The Underlying Hazardous Constituents (UHCs) must be identified for waste streams with the EPA Waste Codes F001-F005, F039, D001 (not treated by CMBST or RORGS), D002, D012-D043 (if treated in non-CWA, non-CWA equivalent or non-SDWA facilities). Please complete and attach an Underlying Hazardous Constituents Table sheet (photocopy as necessary) for each affected Approval/Lab Code.

Classification Groups

- A. Restricted wastes which require treatment.
- B. Restricted wastes already treated to meet LDR Treatment Standards.
- C. Restricted wastes treated with a Specified Technology.
- D. Restricted wastes that meet LDR Treatment Standards without prior treatment.
- E. Restricted wastes subject to an Exemption or Variance.
- F. Hazardous debris subject to Alternative Treatment Standards in 40 CFR 268.45 (List Contaminants).
- G. Hazardous debris subject to Treatment Standards in 40 CFR 268.40.
- H. Lab Pack wastes subject to Alternative Treatment Standards under 40 CFR 268.42(c).
- I. Wastes already treated to remove hazardous characteristic(s) but require further treatment for underlying hazardous constituents (list constituents).

The following certification statements correspond to the Classification Groups as specified below:

Classification Group B: "I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the performance levels specified in 40 CFR 268 Subpart D and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA section 3004(d) without impermissible dilution of the prohibited waste. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

Classification Group C: "I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.42. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine or imprisonment."

Classification Group D: "I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D of all applicable prohibitions set forth in 40 CFR 268.32 or RCRA section 3004(d). I believe that the information I submitted is true, accurate and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment."

Classification Group H: "I certify under penalty of law that I personally have examined and am familiar with the waste and that the lab pack contains only wastes which have not been excluded under appendix IV to 40 CFR part 268 or acid wastes not subject to regulation under 40 CFR part 261. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine or imprisonment."

Classification Group I: "I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.40 to remove the hazardous characteristic. This decharacterized waste contains underlying hazardous constituents that require further treatment to meet universal treatment standards. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine or imprisonment."

I hereby certify that I believe that the information I submitted herein is true, accurate and complete.

LAND DISPOSAL RESTRICTION NOTIFICATION CERTIFICATION FORM
(Example)

Attachment 5
Sheet 2 of 3

INSTRUCTIONS FOR COMPLETION

This form has been developed to comply with the revised notification/certification requirements specified in 40 CFR 268.7 which were amended on September 18, 1994 as a result of the Phase II Land Disposal Restrictions Rule.

Please follow the steps listed below to complete this form.

1. This form will be Page 1 of 1 except when a waste(s) requires the identification of underlying hazardous constituents (UHCs) and a UHC form(s) are included as attachments to the original LDR form.
2. Complete the Generator's name and EPA ID Number as it appears on the manifest.
3. Enter the State Manifest Document Number associated with the wastes identified on the form (NOTE: A separate LDR form must be used for each manifest). If no state number is assigned then use the 5 digit Manifest Document number in box 1 of the manifest.
4. List the approval/lab code for each waste stream identified on the form.
5. Identify the manifest line item number (e.g., 11(a), 11(b), etc.) that corresponds to each waste stream.
6. Place a check mark in the appropriate box to indicate whether the waste stream is a Wastewater (i.e., the waste contains less than 1% Total Organic Carbon (TOC) and less than 1% Total Suspended Solids (TSS) - see 268.2) or a Non Wastewater (i.e., wastes which contain >1% TOC or >1% TSS).
7. Identify all of the appropriate subcategories that apply to the waste stream.
8. The Underlying Hazardous Constituents (UHCs) must be identified for waste streams with any of the following codes:

F001-F005

F039

D001 (except if treated by CMBST or RORGS)

D002

D012-D043

(NOTE: D001, D002 and D012-D043 that are managed in CWA, CWA equivalent or a SWDA unit are not subject to the UHC requirements).

- The UHCs identified must be those *reasonably expected* to be present in the waste at the point of generation. This determination may be made through either direct testing or analysis or through the generator's knowledge of his waste process. The UHCs may be identified directly on the LDR form in the box with the waste codes or you may attach a copy of the UHC Table (this Table corresponds to the Universal Treatment Standards Table in 268.48) to the LDR form. The UHC Table sheet must be completed by: 1) numbering the page as appropriate; 2) providing the lab code and manifest number corresponding to the waste; and 3) marking the applicable UHCs from the Table or, when no UHCs are present, mark the box indicating no UHCs at the top of the form.
9. Place a letter corresponding to the appropriate Classification Group (as listed on the front of the form) that accurately reflects the required notification/certification for each waste stream or Approval/Lab Code.

Special Note for Lab Packs

Lab packs which do not qualify under the provisions of 40 CFR 268.42(c), Appendix IV to 40 CFR 268, must list all waste codes, subcategories and UHCs for each container identified.

Special Note for Hazardous Debris

Debris waste streams should be identified as destined for treatment and disposal using either the treatment standard specified for the wastes contained in the debris (i.e., those listed in 40 CFR 268.40), Group "G"; or using the alternative treatment standards identified in 40 CFR 268.45, Group "F". If the alternative standards are specified please include a list of the contaminants that must be addressed.

REVISION SUMMARY

Revision 10

Processed as PRR 129618

Page	Change
All	Updated footer Routine format upgrade
1	Changed Logo to Progress Energy Changed SHNPP to HNP Revised title to read Hazardous Waste Management
2	Created automatic Table of Contents (update by pressing F9 key and selecting, "update entire table")
3	References <ul style="list-style-type: none"> ▪ added reference to TRN-NGGC-011 ▪ changed from EVC-CPL-16 to EVC-SUBS-00016 ▪ added references EVC-SUBS-00023 and EVC-SUBS-00025 ▪ Changed order of references
5	3.2 - Added abbreviations for Large Quantity Generator, Small Quantity Generator and M&CS 3.2 – changed MSC from Garner Materials Service Center to Materials Service Center 3.2 – changed all abbreviations to alphabetic order 4.2 – Added 40CFR279 to title "Used Oil"
6	4.3 – Added 40CFR261 to title "Waste Solvents and Paints" 4.4 – Deleted reference to EPA regulations since NRC now has regulatory authority on mixed waste 5.1.3 – Renamed from Material Control to Material & Contract Services
7	5.1.5, Licensing / Regulatory Programs <ul style="list-style-type: none"> ▪ 5.1.5.1 - Changed from "Distribute copies of the Hazardous Waste Contingency Plan to local fire departments, hospitals, and government agencies (40CFR265.53)" to "Assist in the preparation of regulatory required documents" and "Distribute copies of regulatory documents." ▪ 5.1.5.2 – Changed "Distribute the Annual Hazardous Waste Report" 5.1.6.6 – Deleted "Maintain the HNP Hazardous Waste Contingency Plan (40CFR265). 5.1.6.7 – Changed wording from "Act as the emergency coordinator during implementation of the contingency plan" to "Act as the emergency coordinator during a hazardous waste emergency."
8	Deleted section 5.1.8, [Responsibilities of the] Hazardous Waste Response Team Renumbered subsequent sections 5.1.9 - Changed section title from "Garner Materials Service Center" to "Progress Energy Hazardous Waste Materials Contract Coordinator" 5.1.10 – Changed section title to HNP Engineering 5.1.11 – Reworded to reflect deletion of Hazardous Waste Contingency Plan
9	5.2.1 Changed from Garner Materials Service Center to Materials Service Center 5.2.1 – Changed from CP&L to Progress Energy 5.2.1.3 – Added "Other items may be sold directly to other vendors directly by HNP M&CS."
11	5.2.4 – sixth bullet – Added "batteries, mercury switches and computer components possessed by the Universal Waste Rules."
12	5.2.6.1.b – Deleted "Empty aerosol cans should be punctured using the can punch..."
13	5.2.6.3.b – Changed from "...hazardous waste shall be shipped...within 90 days..." to "...180 days..."
14	5.2.7.2 – Added Hazardous Waste Contractor as contact for information.

15-16	<p>Added "R" for regulatory requirement for steps 5.2.7.3, 5.2.7.4 and 5.2.7.5</p> <p>5.2.7.3 – Enhanced wording to reflect "...a trained (EPA and DOT representative for the generator must sign the manifest."</p> <p>5.2.8 – Enhanced wording for clarification</p> <p>5.2.9 – enhanced wording "Approved ARFs must be maintained for at least five years by HNP."</p> <p>5.2.10 – deleted reference to CP&L Environmental Guidance Document – Added reference to EVC-SUBS-00018</p> <p>5.2.11.1 – deleted "Having duties specified in the Contingency Plan"</p> <p>5.2.11 – changed Material Control to Material and Contract Services</p>
17	<p>5.1.13 – Deleted "Site Hazardous Waste Contingency Plan" – renumbered subsequent sections</p> <p>5.2.14 – Deleted "Reports and Record Keeping – Biannual Reports. Added "Waste Minimization Reports are required by NCDENR when the annual hazard waste fees are invoiced and paid.</p>
18	<p>5.2.14.2.c – Deleted "For business purposes, all manifests are being retained for the life of the plant".</p> <p>5.2.14.4.b – enhanced wording "Record retention is required for at least three years...".</p>
19	6.0 – Revised titles of attachments to reflect some new titles
20	Attachment 1 – converted scanned document to MicroSoft compatible flowchart
21	Attachment 2 – converted scanned Hazardous Waste Label" to Microsoft compatible drawing
22	Attachment 3 – converted scanned "typical drum labeling and marking" drawing to Microsoft compatible drawing
28	Deleted Attachment 6 – Hazardous Waste Contingency Plan – It is not required for a small quantity generator.
38	Converted Attachment 1 (Org Chart) from Hazardous Waste Contingency Plan to new Attachment 6 titled HNP Hazardous Waste Contacts – updated pager number for alternate Hazardous Waste Coordinator
39	Converted Rev. 9 Attachment 6 Figures 1 – 6 to Rev 10 Attachment 7 titled HNP Hazardous Waste Area Evacuation Routes.
	Updated Revision Summary

CERTIFICATE OF REGISTRATION
FOR REGISTRATION YEAR(S) 2006-2007**

Registrant: PROGRESS ENERGY CAROLINAS, INC.
Attn: VICTORIA K. WILL
410 SOUTH WILMINGTON STREET
RALEIGH, NC 27601

This certifies that the registrant is registered with the U.S. Department of Transportation as required by 49 CFR Part 107, Subpart G.

This certificate is issued under the authority of 49 U.S.C. 5108. It is unlawful to alter or falsify this document.

Reg. No: 053106 550 0130

Issued: 6/1/2006

Expires: 6/30/2007

Record Keeping Requirements for the Registration Program

The following must be maintained at the principal place of business for a period of three years from the date of issuance of this Certificate of Registration:

- (1) A copy of the registration statement filed with PHMSA; and
- (2) This Certificate of Registration

Each person subject to the registration requirement must furnish that person's Certificate of Registration (or a copy) and all other records and information pertaining to the information contained in the registration statement to an authorized representative or special agent of the U. S. Department of Transportation upon request.

Each motor carrier (private or for-hire) and each vessel operator subject to the registration requirement must keep a copy of the current Certificate of Registration or another document bearing the registration number identified as the "U.S. DOT Hazmat Reg. No." in each truck and truck tractor or vessel (trailers and semi-trailers not included) used to transport hazardous materials subject to the registration requirement. The Certificate of Registration or document bearing the registration number must be made available, upon request, to enforcement personnel.

For information, contact the Hazardous Materials Registration Manager, PHH-60, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, 400 Seventh Street SW, Washington, DC 20590, telephone (202) 366-4109.

ATTN: Tier II Coordinator
4701 Mail Service Center
Raleigh, NC 27699-4701

Subject: Progress Energy Carolinas, Inc.
Harris Nuclear Plant - 2006 Chemical Inventory Reports

Ladies and Gentlemen:

Carolina Power & Light Company, doing business as Progress Energy Carolinas, Inc., is submitting the enclosed attachments to meet the specific federal and state chemical and hazardous material inventory reporting requirements described below:

- Attachment 1: EPCRA Section 311 Chemical List (40CFR302).
- Attachment 2: The format of the 2006 SARA Tier II Emergency and Hazardous Chemical Inventory (40CFR370) has changed utilizing the Wake County Local Emergency Planning Committee's SARA Tier II database.

N.C. Right-to-Know Chemical Inventory (N.C. General Statute 95-194) has been included in the Tier II report at Wake County's request. This report is also being provided to the Apex and Holly Springs Fire Departments.

Omitted from these lists are ammunition and special devices necessary for the security of the Harris Plant. The information on these types of materials and quantities is considered "Safeguards Information" under Title 10, Section 73.21 of the Code of Federal Regulations. Should a response be required by your department to an area containing materials described herein, your personnel would be under the escort of Security Officers who are knowledgeable of the storage location.

Also, we are requesting that the attached information only be distributed to organizations and personnel on a "Need to Know" basis.

If you have any questions or comments regarding this information, please contact Mr. R. T. Wilson at (919) 362-2444.

Sincerely,

A handwritten signature in cursive script that reads 'Eric McCartney'.

Subject: Progress Energy Carolinas, Inc.
Harris Nuclear Plant - 2005 Chemical Inventory Reports

Ladies and Gentlemen:

Carolina Power & Light Company, doing business as Progress Energy Carolinas, Inc., is submitting the enclosed attachments to meet the specific federal and state chemical and hazardous material inventory reporting requirements described below:

- Attachment 1: EPCRA Section 311 Chemical List (40CFR302).
- Attachment 2: The format of the 2005 SARA Tier II Emergency and Hazardous Chemical Inventory (40CFR370) has changed utilizing the Wake County Local Emergency Planning Committee's SARA Tier II database.

N.C. Right-to-Know Chemical Inventory (N.C. General Statute 95-194) has been included in the Tier II report at Wake County's request. (This report is also provided to the Apex Fire and Holly Springs Public Safety Departments).

Omitted from these lists are ammunition and special devices necessary for the security of the Harris Plant. The information on these types of materials and quantities is considered "Safeguards Information" under Title 10, Section 73.21 of the Code of Federal Regulations. Should a response be required by your department to an area containing materials described herein, your personnel would be under the escort of Security Officers who are knowledgeable of the storage location.

Also, we are requesting that the enclosed maps only be distributed to organizations with a "Need to Know" of exact locations of our storage areas.

If you have any questions or comments regarding this information, please contact Mr. R. T. Wilson at (919) 362-2444.

Sincerely,

Eric McCartney
Plant General Manager
Harris Nuclear Plant

SARA Tier II Emergency and Hazardous Chemical Inventory
and
N.C. Right-to-Know Chemical Inventory

Facility report filed by your company to the
SARA Title III Online Reporting System

This Reporting System has been approved by Wake County, North Carolina Local Emergency Planning Committee (LEPC) for Tier II submission for facilities located within Wake County. This report was submitted to Wake County LEPC, Wake County Emergency Management, North Carolina State Emergency Response Commission, and the Local District Fire Department noted below and is accurate as of: 2/21/2006 3:26:30 PM

I certify, under penalty of law that I have personally examined and am familiar with the information submitted in the Tier II Document filed, and that based on my inquiry of those individuals responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.

SHEARON HARRIS NUCLEAR POWER PLANT

FEB 28 2005

SERIAL: HNP-05-025

N. C. Emergency Response Commission
ATTN: SARA Coordinator
4714 Mail Service Center
Raleigh, NC 27699-4714

Subject: Progress Energy Carolinas, Inc.
Harris Nuclear Plant - 2004 Chemical Inventory Reports

Ladies and Gentlemen:

Carolina Power & Light Company, doing business as Progress Energy Carolinas, Inc., is submitting the enclosed attachments to meet the specific federal and state chemical and hazardous material inventory reporting requirements described below:

- Attachment 1: EPCRA Section 311 Chemical List (40CFR302). There are additions to this attachment.
- Attachment 2: The format of the 2004 SARA Tier II Emergency and Hazardous Chemical Inventory (40CFR370) has changed utilizing the Wake County Local Emergency Planning Committee's SARA Tier II database. The new chemicals on the list have been added.

N.C. Right-to-Know Chemical Inventory (N.C. General Statute 95-194) has been included in the Tier II report at Wake County's request. (This report is also provided to the Apex Fire and Holly Springs Public Safety Departments).

Omitted from these lists are ammunition and special devices necessary for the security of the Harris Plant. The information on these types of materials and quantities is considered "Safeguards Information" under Title 10, Section 73.21 of the Code of Federal Regulations. Should a response be required by your department to an area containing materials described herein, your personnel would be under the escort of Security Officers who are knowledgeable of the storage location.

Also, we are requesting that the enclosed maps only be distributed to organizations with a "Need to Know" of exact locations of our storage areas.

If you have any questions or comments regarding this information, please contact Mr. R. T. Wilson at (919) 362-2444.

Sincerely,

B. C. Waldrep
Plant General Manager
Harris Nuclear Plant

SARA Tier II Emergency and Hazardous Chemical Inventory
and
N.C. Right-to-Know Chemical Inventory

Facility report filed by your company to the SARA Title III Online Reporting System

This Reporting System has been approved by Wake County, North Carolina, Local Emergency Planning Committee (LEPC) for Tier II submission for facilities located within Wake County. This report was submitted to Wake County LEPC, Wake County Emergency Management, North Carolina State Emergency Response Commission, and the Local District Fire Department noted below and is accurate as of:

2/25/2005 9:51:27 AM

I certify under penalty of law that I have personally examined and am familiar with the information submitted in the Tier II Document filed, and that based on my inquiry of those individuals responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete.

SHEARON HARRIS NUCLEAR POWER PLANT

NRC Document Control Desk
SERIAL: HNP-07-105

Response to RAI No. 1
Item 13

Facility: <u>Harris Nuclear Plant</u>	Reporting Period: <u>2004</u>
Facility Contact: <u>Bob Wilson</u>	Voicenet: <u>751-2444</u>

A. Solid Waste Disposal Costs

Most facilities contract with a waste hauler for the lease of one or more dumpsters and the service of hauling the dumpster to the local landfill. The facility may also be charged tipping fees by the landfill. Disposal costs can be reduced by reducing the number of dumpsters, reducing the size of the dumpster, reducing the number of times the dumpster is hauled to the landfill, and by reducing the volume of material that is discarded.

Number of dumpsters on site	Waste Hauler	Waste Industries
Varries	Telephone	919-662-7100

Container Capacity ¹	Monthly Lease Charge ¹	Hauling Fees ² (Trips/Month)	Landfill Tipping Fee ³	Total Monthly Cost
1. 8 CY	\$ 415	\$ 85 ()	\$ 0	\$ 500
2. 30 CY	\$ 415	\$ 148 ()	\$ 150	\$ 713
3. 40 CY	\$ 415	\$ 148 ()	\$ 150	\$ 713
4.	\$	\$ ()	\$	\$
5.	\$	\$ ()	\$	\$

1. Typical containers are the 8 yd³ dumpster, which is emptied into the waste hauler's truck, and the 30 yd³ container (either open top or compactor), which is hauled directly to the landfill. More frequent emptying of the smaller container may be more cost effective than the larger container.
2. Waste haulers charge each time a dumpster is emptied. Regularly scheduled service of a partially filled container will cost more than calling the contractor for service when the container is nearly full. Discarding bulky items, such as empty cardboard boxes, will increase disposal costs. Recycling or reusing discarded items will decrease disposal costs.
3. Waste haulers pay a tipping fee to dispose of trash at the landfill. Recycling discarded items or using other waste reduction techniques to eliminate waste generation can reduce the volume of waste generated each month.

B. Hazardous Waste Disposal

Amount Generated	Disposal Cost
<u>1071</u>	<u>See chemical copst</u>

C. Waste Minimization Programs

Indicate recycling/waste minimization programs being conducted at this facility. Provide an estimate of the number, pounds, or gallons for those materials **not** sent to the Materials Service Center during the quarter.

Materials	Amount/Volume	Cost
Aluminum cans	2000-3000 lbs	02/04/05
Antifreeze (gallons)	100 gallons	CDC
Batteries	6000-7000 lbs	see recycling cost
Alkaline	See Batteries	0
Lead-acid	See Batteries	0
Lithium	See Batteries	0
Ni-cad	See Batteries	0
Other		
Cardboard	300-400 CY	5000
Chemicals	Not Tracked	29000
Drums	Not Tracked	0
Glass	Not Tracked	0
Industrial rags (laundered)	N/A	0
Oil	N/A	0
On-site (burned for energy recovery)	N/A	
Off-site (Noble)	Shamrock ~21000 gallons	see chemical cost
Oil filters	Not Tracked	see chemicals
Paper	5000-6000 yds	see solid waste p 1
Plastic	Not Tracked	0
Printer cartridges /ribbons	400-500	0
Scrap metal	50000-70000 lbs	sold for profit
Wood	12-15 tons	see recycling cost
Pallets	Processed with wood	0
Poles	N/A	0
Treated wood (cross ties and cross arms)	Removed by contractor	0
Other (list) Lighting	5000-6000 lamps	0

Comments: Numbers are based on contract invoices and historical data.

Recycling cost = \$3500

Mr. Jim Barber, Permitting Branch Head
North Carolina Dept. of Environment and Natural Resources
Solid Waste Section
1646 Mail Service Center
Raleigh, NC 27699-1646

Subject: Harris Nuclear Plant
Industrial Landfill Closure
N.C. SW Permit #92-10

Dear Mr. Barber:

The Harris Nuclear Plant recorded the solid waste permit for the above referenced landfill with the Wake County Register of Deeds on October 3, 1986 (copy attached). This recordation identified three separate areas: Area I, Area II and Area III. As previously discussed, Areas I & II were never utilized for waste disposal. Only Area III was developed into a landfill and used for waste disposal. Attached are the two deeds which encumber the property identified as Area III on the October 3, 1986 recordation. We hope this completes the required information to close the Industrial Landfill at the Harris Nuclear Plant.

If you have any questions regarding the information submitted, please contact Mr. Robert T. Wilson at 919-362-2444 or Mr. John R. Tocpfer at 919-546-7863.

Sincerely,

A handwritten signature in black ink that reads "BCWaldrep".

RE: RECORDATION OF SOLID WASTE MANAGEMENT PERMIT

Dear Mr. Wilkins:

The North Carolina Department of Human Resources, Division of Health Services, Solid and Hazardous Waste Management Branch, has granted Carolina Power & Light Company (CP&L) Solid Waste Permit No. 92-10 to operate two sanitary landfills and one demolition landfill at the Shearon Harris Nuclear Power Plant site in southwestern Wake County.

North Carolina General Statute 130-166.21(b) requires that any person (owner and/or operator) granted such a permit must file a certified copy of the permit in the Register of Deeds Office in the county in which the landfill is located. Accordingly, please find enclosed a certified copy of Solid Waste Permit No. 92-10 and a check for \$8.50 payable to the Wake County Register of Deeds to cover the recording fee for the permit and attachments. Please send one copy of the recorded document to me.

The assistance provided by your office in this matter is most appreciated.

Yours very truly,

STATE OF NORTH CAROLINA

DEPARTMENT OF HUMAN RESOURCES

DIVISION OF HEALTH SERVICES

P.O. Box 2091 Raleigh 27602

SOLID WASTE PERMIT

Carolina Power & Light Company is hereby issued a permit to operate a Sanitary Landfill

located in Wake County on Harris Plant Site

in accordance with Article 9, Chapter 130A, of the General Statutes of North Carolina and all rules promulgated thereunder and subject to the conditions set forth in this permit. The facility is located on the below described property.

Area I (as shown on the site drawings submitted earlier to your office) is described as follows: BEGINNING at a point having N. C. Coordinates N=687,550 and E=2,010,540; and running thence generally north to a point having N. C. Coordinates N=688,250 and E=2,010,560; and thence directly east to a point having N. C. Coordinates N=688,250 and E=2,010,750; and runs thence generally southeast to a point having N. C. Coordinates N=687,550 and E=2,011,075; and thence runs west to the BEGINNING.

Area II is described as BEGINNING at a point having N. C. Coordinates N=687,480 and E=2,009,650; and thence running north to a point having N. C. Coordinates N=688,130 and E=2,009,650; thence running generally east-northeast to a point having N. C. Coordinates N=688,325 and E=2,010,250; and thence running south to a point having N. C. Coordinates N=687,600 and E=2,010,250; and thence running generally west-southwest to the BEGINNING.

PERMIT NO. 92-10DATE ISSUED 8-28-86

SOLID WASTE PERMIT

Property Description (Continued):

Area III is described as BEGINNING at a point having N.C. Coordinates N=688,890 and E=2,010,530; thence running north to a point having N.C. Coordinates N=689,500 and E=2,010,530; thence running generally east-northeast to a point having N.C. Coordinates N=689,640 and E=2,011,800; and thence running generally south to a point having N.C. Coordinates N=689,020 and E=2,011,740; and thence runs generally west-southwest to BEGINNING.

PERMIT NO. 92-10
DATE ISSUED 8/29/86SOLID WASTE PERMIT
FOR
C P & L

Conditions of Permit:

1. This permit may be subject to review at an administrative hearing upon petition of anyone whose legal rights, privileges and duties may have been affected by the issuance thereof.
2. This permit shall not be effective unless the certified copy is filed in the register of deeds' office, in the grantor index under the name of the owner of the land in the county or counties in which the land is located. After recordation, the certified copy shall be returned to the Solid & Hazardous Waste Management Branch and shall have indicated on it the page and book number, date of recordation and registrar's seal.
3. When this property is sold, leased, conveyed or transferred, the deed or other instrument of transfer shall contain in the description section in no smaller type than that used in the body of the deed or instrument a statement that the property has been used as a sanitary landfill.
4. This permit amends and upgrades permit 92-A.
5. This solid waste disposal site is permitted to receive solid waste as defined in 10 NCAC 10G, .0101(36), except that hazardous waste, liquid waste and any other wastes that may pose a threat to the environmental or the public health are prohibited from disposal at this site unless prior authorization is obtained from the Division of Health Services. Industrial wastes and sludges shall be approved by DHS through waste determination procedure (Attachment #4).
6. This permit is for construction according to attached plans. Any modification or deviation from the approved plans shall be approved by the North Carolina Solid and Hazardous Waste Management Branch.
7. Groundwater monitoring wells and requirements:
 - a. Wells shall be installed at locations as shown on construction plans.
 - b. Installation shall conform to DHS well standard (Attachment 1).
 - c. A well completion record shall be submitted to DHS for each monitoring well constructed (Attachment 2).
 - d. Wells for Area 3 shall be installed within 60 days. Area 2 wells shall be installed prior to disposal in Area 2. Wells are not required for Area 1.
 - e. Wells shall be installed and screened from the water table to ten (10) feet below the water table.
 - f. Maximum depth of the wells should not exceed 100 feet. If the water table is not located above 100 feet, this office should be notified.

SOLID WASTE PERMIT

(Continued)

8. This facility shall conform to operating procedures in Rule .0505 of the Solid Waste Management Rules.
9. Groundwater quality at this facility is subject to the classification and remedial action provisions of 15 NCAC 2L (Attachment 3).
10. Six inches of soil shall be applied to the working face weekly. Frequency of soil cover may be increased based on volume of paper disposed.
11. Wastes other than demolition wastes shall be covered with soil or demolition material daily.
12. Area 1 is approved for demolition wastes only.
13. Trenches shall be covered and seeded upon completion.

NORTH CAROLINA

WAKE COUNTY

CREV BOOK 1961 PAGE 07

THIS DEED, made this 16th day of December, 1970, by CHARLES D. BARHAM, JR. and wife MARGARET C. BARHAM, parties of the first part; to CAROLINA POWER & LIGHT COMPANY, A North Carolina Corporation, party of the second part, all of the County of Wake and State of North Carolina:

W I T N E S S E T H:

That the said parties of the first part, in consideration of TEN DOLLARS (\$10.00) AND OTHER VALUABLE CONSIDERATION, to them in hand paid by the party of the second part, the receipt of all of which is hereby acknowledged, have bargained and sold and by these presents do grant, bargain, sell and convey unto the party of the second part, its successors and assigns, those certain parcels of land in Buckhorn Township, Wake County, North Carolina, more particularly described as follows:

PARCEL 1:

Tract 1: BEGINNING at a point in the center of a public road, D. W. Walker's corner, and running said road North 54 degrees 10 minutes West 637 feet; thence with said road North 84 degrees 15 minutes West 500 feet; thence with said road North 81 degrees 00 minutes West 1115 feet to a point witnessed by a stake on the south side of road; thence South 4 degrees 00 minutes West 1405 feet to a Red Oak in Hedgerow; thence with Hedgerow North 85 degrees 00 minutes West 833 feet to an iron stake; thence North 3 degrees 00 minutes East 1785 feet to a stake; thence South 87 degrees 15 minutes East about 3060 feet to a stake; thence South 7 degrees 00 minutes West 912 feet to the beginning point in the center of road witnessed by a stake on the north side of said road, containing sixty three and one-half acres and being a portion of that tract of land conveyed to W. C. Holder by Norman Winston, and later conveyed to Len Winston and wife by deed of Arthur Baynes Wolfe and wife, dated Feb. 12, 1946, recorded Book 929, page 693, Wake County Registry.

SAVE AND EXCEPTING FROM THIS CONVEYANCE, HOWEVER, are those two certain tracts of land conveyed by Len Winston, widower, to Piedmont Woodyards, by deed dated March 26, 1956 and recorded in Book 1186, page 584.

Tract 2: Being Lot No. 3 as found in the division of the estate of William Booth (dec.) and bounded as follows: BEGINNING at a stake and pointers in W. J. Patrick's line L. M. Holt's corner, running South 88 degrees East to the center of Bonsal and Corinth Road; following said road, center to Lot No. 4; thence North 4 degrees East to a stone in the line of Lot 4, corner of Lot No. 1; thence North 88 degrees West 57.81 chains to a stake in Patrick's line, corner of Lot 2; thence South 1 degree 30 minutes West 8.65 chains to the beginning, containing 37 acres, more or less, and being the identical land conveyed to Lenin Winston by deed of R. B. Poole and wife, dated May 21, 1951, recorded Book 1073, page 54, Wake County Registry.

SAVE AND EXCEPTING FROM THIS CONVEYANCE, HOWEVER, is that certain tract of land formerly conveyed by Lenin Winston, widower to Riegal Woodlands, Corporation, by deed dated November 23, 1951, recorded Book 1084, page 290, Wake County Registry.

Tract 3: Lot No. 1 as found in the division of the estate of William Boothe deceased, and bounded as follows, viz: BEGINNING at a stake corner of Lot 4 in Davis' line; running North 85½ degrees West 29.81 chains to a stake, corner of Lot No. 2; thence South 1½ degrees West 19.70 chains corner of Lot No. 2 in the line of Lot No. 3; thence South 88 degrees East 29.81 chains corner of Lot No. 3 in the line of Lot No. 4; thence North 4 degrees East 18.56 chains to the beginning, containing 59.35 acres, more or less. This being the identical lands conveyed to Lenin Winston by deed of Mrs. F. W. Boothe et al, dated August 10, 1943, recorded in Book 897, page 546, Wake County Registry.

Parcel 1 being the identical land conveyed to Joe W. Stephenson and wife by deed dated November 23, 1962, and recorded in Book 1530, page 283, Wake County Registry.

PARCEL 2:

Tract 1: Adjoining the lands of C. J. Bright Estate, A. L. Wilson and Mimms Estate J. B. Womble and others and described as follows: BEGINNING at a sweet gum on the west bank of Thomas Creek; thence along said Bright line North 86 degrees 15 minutes West, 1860 feet to a stake and pointers; thence along A. L. Wilson's line South 7 degrees 00 minutes West, 1401 feet to a stake in Mimms' line; thence along J. B. Womble's line South 87 degrees 00 minutes East, 410 feet to a stake; thence North 4 degrees 45 minutes East, 235 feet to a stake; thence South 87 degrees 00 minutes East, 1402 feet to a stake thence North 71 degrees 30 minutes East, 85 feet to a hickory tree in bank of creek; thence up said Thomas Creek to the beginning, containing 52 acres, more or less. See deed to W. B. Womble and wife, recorded in Book 734, page 423, Wake County Registry.

Tract 2: Adjoining the lands of W. B. Womble, A. L. Wilson, J. B. Womble and other and described as follows: BEGINNING at a hickory and pointers on Thomas Creek, W. B. Womble's corner of his first tract; thence along his line South 71 degrees 30 minutes West 85 feet to a stake; thence North 87 degrees West 1402 feet to a stake; thence South 4 degrees 45 minutes West 235 feet to a stake; thence North 87 degrees West 410 feet to a stake in Mims' line; thence with said Mims' line South 7 degrees 15 minutes West 221 feet to a stake on East side of road to Bonsal, N. C.; J. B. Womble's corner; thence with said Womble's line South 66 degrees East 1575 feet to a stake and pointers; thence South 86 degrees 45 minutes East 1326 feet to a poplar and pointers on the west bank of Thomas Creek; thence up the various curves of said creek 1642 feet to the beginning, containing 44 acres, more or less. See deed to W. B. Womble and wife, recorded in Book 871, page 434, Wake County Registry.

SAVE AND EXCEPTING, HOWEVER, from this conveyance of the above described Tract 2: All of that tract of land containing 3.1 acres, more or less, heretofore conveyed to Preston J. Thomas by Norman Winston and wife, described as follows: BEGINNING at an iron stake and pointers, J. B. Womble's and Norman Winston's corner, said point being the southeast end of a line described in Winston's 96 acre tract as South 66 degrees East 1575 feet and runs thence from this beginning corner with said Winston's line North 24 degrees East 340 feet to a stake and pointers on the edge of a field; runs thence with another of said Winston's line North 66 degrees West 397 feet to a stake in a field thence with another of said Winston's line South 24 degrees West 340 feet to a stake and pointers in J. B. Womble's line; thence with said Womble's line South 66 degrees East 397 feet to the beginning.

Parcel 2 being the identical land conveyed to Charles D. Barham, Jr. and wife by deed dated December 16, 1970 and recorded in Book _____, page _____, Wake County Registry.

TO HAVE AND TO HOLD the aforesaid parcels of land and all privileges thereunto belonging to the said party of the second part, its successors and assigns, forever.

And the said parties of the first part for themselves, their heirs, executors and administrators; covenant with the party of the second part, its successors and assigns, that they are seized of said premises in fee and have the right to convey the same in fee simple; that the same are free from encumbrances; and that they will warrant and defend the said title to the same against the claims of all persons whomsoever.

IN TESTIMONY WHEREOF, the said parties of the first part have hereunto set their hands and seals the day and year first above written.

Charles D. Barham, Jr. (SEAL)

Mr. B.C. Waldrep, Plant General Manager
Progress Energy Carolinas, Inc. - Harris Nuclear Plant
P.O. Box 165
New Hill, North Carolina 27562

**SUBJECT: Closure of the Harris Nuclear Plant
Unlined Industrial Landfill Unit; New Hill, North Carolina
FACILITY PERMIT #: 92-10**

Dear Mr. Waldrep:

The Solid Waste Section (the Section) has received and reviewed documentation submitted by Progress Energy Carolinas, Inc. (PEC), by John R. Toepfer, P.E., regarding the subject facility. Based upon the certification report dated 29 March 2004 from PEC, the Section has determined that the unlined industrial landfill unit at the subject facility has been closed in accordance with the applicable requirements. This determination may be rescinded should any of the documentation prove to be inaccurate.

The unlined industrial landfill unit at the subject facility is considered closed subject to the following post closure conditions. The owner and/or operator of the facility, Progress Energy Carolinas, Inc., is responsible for compliance with these conditions. Condition #8 addresses continued water quality monitoring for the existing ground water monitoring system.

Please note, that this closure shall become effective upon written notification by the owner/operator that the facility shall be maintained in compliance with the post closure conditions specified in this letter. Rule .0510 also states that when a disposal unit is closed, the permit to operate that unit is terminated and any future disposal operations will require approval by the Section.

Mr. Waldrep
Page 2
May 25, 2005

Please note that the post-closure monitoring period is effective starting on 25 March 2004, as indicated by the certification date in the closure documentation submittal provided by the certifying engineer. Also note that this closure letter and Post Closure conditions must be recorded in accordance with condition #7 and a copy of this recorded document returned to the Solid Waste Section at:

DIVISION OF WASTE MANAGEMENT
SOLID WASTE SECTION
1646 MAIL SERVICE CENTER
RALEIGH, NORTH CAROLINA 27699-1646
ATTN: Jim Barber

The entire closure letter, pages 1 thru 12 (including the recordation page) , should be recorded against the following tracts of property, as referenced by the deeds provided by PEC to the Solid Waste Section for recordation purposes. The unlined, industrial waste landfill is located on the following properties:

- A. Deed Book: 1961 Page: 07-08;
- B. Deed Book: 2098 Page: 374-376;

If you have any questions concerning this closure letter don't hesitate to call Jim Barber at (919) 508-8495 or John Crowder in the Wilmington Regional Office at (910) 395-3900.

Sincerely,

Jim Barber

FACILITY**

PROGRESS ENERGY CAROLINAS, INC., LANDOWNER
formerly CAROLINA POWER & LIGHT COMPANY

is hereby issued a

LETTER OF CLOSURE

for the PROGRESS ENERGY CAROLINAS, INC. - HARRIS NUCLEAR PLANT
UNLINED INDUSTRIAL LANDFILL UNIT located on property recorded in
DEED BOOK: 1961 PAGE: 07-08 AND DEED BOOK: 2098 PAGE: 374-376

located at 5413 Shearon Harris Road in New Hill, Wake County, North Carolina in
accordance with Article 9, Chapter 130A, of the General Statutes of North Carolina and
all rules promulgated thereunder and subject to the conditions set forth in this letter of
closure.

James C. Coffey
Section Chief

Solid Waste Section
Division of Waste Management

1646 Mail Service Center, Raleigh, North Carolina 27699-1646
Phone: 919-508-8400 \ FAX: 919-733-4810 \ Internet <http://wastenotnc.org>
An Equal Opportunity / Affirmative Action Employer - Printed on Dual Purpose Recycled Paper

POST CLOSURE CONDITIONS

1. **MANAGEMENT OF LANDFILL GAS:** The owner and/or operator shall take the measures necessary to ensure that the closed site shall continue to meet the design standards for landfill gas found in Rule .0503(2)(a).
2. **MANAGEMENT OF SURFACE WATER:** The owner and/or operator shall take the measures necessary to ensure that the closed site shall meet the requirements of Rule .0503(2)(c). In addition, the landfill unit shall be maintained such that surface water runoff occurs in a controlled manner, and surface water shall not be impounded over waste.
3. **AIR QUALITY:** The owner/operator shall ensure that landfill units do not violate any applicable requirements developed under a State Implementation Plan approved or promulgated by the U.S. EPA Administrator pursuant to Section 110 of the Clean Air Act, as amended.
4. **FINAL COVER SYSTEM:** The integrity and effectiveness of the final cover system and any permanent erosion control devices must be maintained. This could include making repairs to the cover as necessary to correct the effects of settlement, subsidence, erosion, or other events.
5. **PROPOSED USES:** The owner/operator shall submit a proposal for the Section's review and approval addressing post closure uses of the facility. Proposed post closure uses shall not violate any post closure conditions found in this letter. In particular, plans for post closure uses shall avoid possibilities for the entrapment of methane gas. Routine landfill gas monitoring within structures and at the facility boundary may not be sufficient to detect potentially dangerous situations.
6. **ONGOING SOLID WASTE MANAGEMENT ACTIVITIES:** Continuing solid waste management activities shall not violate any post closure conditions found in this letter, and must meet any other applicable requirements.
 - A. Based upon information provided in the closure certification report dated 29 March 2004, PEC-Harris Nuclear Plant will have a Material Laydown Yard as shown on sheet 2 of 3 of the Landfill Closure survey drawings on the plant site for the collection, storage and reuse of the following materials on the Harris Nuclear Plant site:

Mr. Waldrep
Page 5
May 25, 2005

- i. Non-painted concrete rubble
- ii. Non-painted asphalt rubble
- iii. Gravel, non-contaminated soil
- iv. Concrete pipe
- v. concrete road barricades(pier foundations, concrete piles, ballast, etc.)
- vi. Railroad ties/treated cross ties
- vii. Vegetative debris generated from on-site landscaping/mulch.

7. **RECORDATION:** The owner/operator shall ensure that the recordation requirements for land disposal sites found in Rule .0204 are met. The original landfill permit for the Harris Nuclear Plant was recorded on 8 October 1986 in Deed Book: 3841 Page: 735 - 739.

Following closure of the unlined Industrial Landfill unit, the owner or operator shall record a notation on the deed to the landfill facility property, or some other instrument that is normally examined during title search, and notify the Division that the notation has been recorded and a copy has been placed in the operating record. The notation on the deed shall in perpetuity notify any potential purchaser of the property that:

- (a) The property has a unlined landfill unit; and
- (b) Its use is restricted under the closure plan approved by the Division.

The attached certified copy of the closure letter shall be recorded by the Register of Deeds and indexed in the grantor index under the name of the land owner. The certified copy affixed with the Register's seal and the date, book, and page number of the recording shall be returned to the Solid Waste Section at:

DIVISION OF WASTE MANAGEMENT
SOLID WASTE SECTION
1646 MAIL SERVICE CENTER
RALEIGH, NORTH CAROLINA 27699-1646
ATTN: Jim Barber

8. **WATER QUALITY MONITORING AND REPORTING REQUIREMENTS:**

- a. Groundwater quality at this facility is subject to the "Classification and Water Quality Standards Applicable to the Groundwaters of North Carolina," 15A NCAC 2L. This includes, but is not limited to, the provisions for detection monitoring, assessment, and corrective action.

Mr. Waldrep
Page 6
May 25, 2005

- b. The permittee shall sample the detection monitoring wells and surface water sampling location(s) at a minimum on a semi-annual basis.
- c. Water quality detection monitoring shall continue for a minimum of five years from the date of the engineers certification, indicating that the facility is closed. After five years the Sections will determine if further monitoring is to be required.
- d. Sampling equipment and methods shall conform to specifications in Attachment 1, "North Carolina Water Quality Monitoring Guidance Document for Solid Waste Facilities." The sampling parameters and methods shall be those found in Attachment 2, "Sampling and Analysis Requirements for Construction and Demolition Landfills and Closed Sanitary Landfills", or an alternate list of sampling parameters as approved by the Solid Waste Section.
- e. The permittee shall maintain a record of all monitoring events and analytical data. Reports of the sampling events and analytical data shall be submitted to the Section in a timely manner.

THIS DEED, made this 16th day of December, 1970, by CHARLES D. BARHAM, JR. and wife MARGARET C. BARHAM, parties of the first part; to CAROLINA POWER & LIGHT COMPANY, A North Carolina Corporation, party of the second part, all of the County of Wake and State of North Carolina:

W I T N E S S E T H:

That the said parties of the first part, in consideration of TEN DOLLARS (\$10.00) AND OTHER VALUABLE CONSIDERATION, to them in hand paid by the party of the second part, the receipt of all of which is hereby acknowledged, have bargained and sold and by these presents do grant, bargain, sell and convey unto the party of the second part, its successors and assigns, those certain parcels of land in Buckhorn Township, Wake County, North Carolina, more particularly described as follows:

PARCEL 1:

Tract 1: BEGINNING at a point in the center of a public road, D. W. Walker's corner, and running said road North 54 degrees 10 minutes West 637 feet; thence with said road North 84 degrees 15 minutes West 500 feet; thence with said road North 81 degrees 00 minutes West 1115 feet to a point witnessed by a stake on the south side of road; thence South 4 degrees 00 minutes West 1405 feet to a Red Oak in Hedgerow; thence with Hedgerow North 85 degrees 00 minutes West 833 feet to an iron stake; thence North 3 degrees 00 minutes East 1785 feet to a stake; thence South 87 degrees 15 minutes East about 3060 feet to a stake; thence South 7 degrees 00 minutes West 912 feet to the beginning point in the center of road witnessed by a stake on the north side of said road, containing sixty three and one-half acres and being a portion of that tract of land conveyed to W. C. Holder by Norman Winston, and later conveyed to Len Winston and wife by deed of Arthur Baynes Wolfe and wife, dated Feb. 12, 1946, recorded Book 929, page 693, Wake County Registry.

SAVE AND EXCEPTING FROM THIS CONVEYANCE, HOWEVER, are those two certain tracts of land conveyed by Len Winston, widower, to Piedmont Woodyards, by deed dated March 26, 1956 and recorded in Book 1186, page 584.

Tract 2: Being Lot No. 3 as found in the division of the estate of William Booth (dec.) and bounded as follows: BEGINNING at a stake and pointers in W. J. Patrick's line L. M. Holt's corner, running South 88 degrees East to the center of Bonsal and Corinth Road; following said road, center to Lot No. 4; thence North 4 degrees East to a stone in the line of Lot 4, corner of Lot No. 1; thence North 88 degrees West 57.81 chains to a stake in Patrick's line, corner of Lot 2; thence South 1 degree 30 minutes West 8.65 chains to the beginning, containing 37 acres, more or less, and being the identical land conveyed to Lenin Winston by deed of R. B. Poole and wife, dated May 21, 1951, recorded Book 1073, page 54, Wake County Registry.

SAVE AND EXCEPTING FROM THIS CONVEYANCE, HOWEVER, is that certain tract of land formerly conveyed by Lenin Winston, widower to Riegal Woodlands, Corporation, by deed dated November 23, 1951, recorded Book 1084, page 290, Wake County Registry.

Tract 3: Lot No. 1 as found in the division of the estate of William Boothe deceased, and bounded as follows, viz: BEGINNING at a stake corner of Lot 4 in Davis' line; running North 85½ degrees West 29.01 chains to a stake, corner of Lot No. 2; thence South 1½ degrees West 19.70 chains corner of Lot No. 2 in the line of Lot No. 3; thence South 88 degrees East 29.81 chains corner of Lot No. 3 in the line of Lot No. 4; thence North 4 degrees East 18.56 chains to the beginning, containing 59.35 acres, more or less. This being the identical lands conveyed to Lenin Winston by deed of Mrs. F. W. Boothe et al, dated August 10, 1943, recorded in Book 897, page 546, Wake County Registry.

Parcel 1 being the identical land conveyed to Joe W. Stephenson and wife by deed dated November 23, 1962, and recorded in Book 1530, page 283, Wake County Registry.

PARCEL 2:

Tract 1: Adjoining the lands of C. J. Bright Estate, A. L. Wilson and Mimms Estate J. B. Womble and others and described as follows: BEGINNING at a sweet gum on the west bank of Thomas Creek; thence along said Bright line North 86 degrees 15 minutes West, 1860 feet to a stake and pointers; thence along A. L. Wilson's line South 7 degrees 00 minutes West, 1401 feet to a stake in Mimms' line; thence along J. B. Womble's line South 87 degrees 00 minutes East, 410 feet to a stake; thence North 4 degrees 45 minutes East, 235 feet to a stake; thence South 87 degrees 00 minutes East, 1402 feet to a stake thence North 71 degrees 30 minutes East, 85 feet to a hickory tree in bank of creek; thence up said Thomas Creek to the beginning, containing 52 acres, more or less. See deed to W. B. Womble and wife, recorded in Book 734, page 423, Wake County Registry.

Tract 2: Adjoining the lands of W. B. Womble, A. L. Wilson, J. B. Womble and other and described as follows: BEGINNING at a hickory and pointers on Thomas Creek, W. B. Womble's corner of his first tract; thence along his line South 71 degrees 30 minutes West 85 feet to a stake; thence North 87 degrees West 1402 feet to a stake; thence South 4 degrees 45 minutes West 235 feet to a stake; thence North 87 degrees West 410 feet to a stake in Mims' line; thence with said Mims' line South 7 degrees 15 minutes West 221 feet to a stake on East side of road to Bonsal, N. C.; J. B. Womble's corner; thence with said Womble's line South 66 degrees East 1575 feet to a stake and pointers; thence South 86 degrees 45 minutes East 1326 feet to a poplar and pointers on the west bank of Thomas Creek; thence up the various curves of said creek 1642 feet to the beginning, containing 44 acres, more or less. See deed to W. B. Womble and wife, recorded in Book 871, page 434, Wake County Registry.

SAVE AND EXCEPTING, HOWEVER, from this conveyance of the above described Tract 2: All of that tract of land containing 3.1 acres, more or less, heretofore conveyed to Preston J. Thomas by Norman Winston and wife, described as follows: BEGINNING at an iron stake and pointers, J. B. Womble's and Norman Winston's corner, said point being the southeast end of a line described in Winston's 96 acre tract as South 66 degrees East 1575 feet and runs thence from this beginning corner with said Winston's line North 24 degrees East 340 feet to a stake and pointers on the edge of a field; runs thence with another of said Winston's line North 66 degrees West 397 feet to a stake in a field thence with another of said Winston's line South 24 degrees West 340 feet to a stake and pointers in J. B. Womble's line; thence with said Womble's line South 66 degrees East 397 feet to the beginning.

Parcel 2 being the identical land conveyed to Charles D. Barham, Jr. and wife by deed dated December 16, 1970 and recorded in Book _____, page _____, Wake County Registry.

TO HAVE AND TO HOLD the aforesaid parcels of land and all privileges thereunto belonging to the said party of the second part, its successors and assigns, forever.

And the said parties of the first part for themselves, their heirs, executors and administrators; covenant with the party of the second part, its successors and assigns, that they are seized of said premises in fee and have the right to convey the same in fee simple; that the same are free from encumbrances; and that they will warrant and defend the said title to the same against the claims of all persons whomsoever.

IN TESTIMONY WHEREOF, the said parties of the first part have hereunto set their hands and seals the day and year first above written.

Mr. Alan Klimek, Director
Division of Water Quality
N. C. Department of Environment and Natural Resources
1617 Mail Service Center
Raleigh, NC 27699-1617

Subject: Harris Nuclear Plant 2005 Environmental Monitoring Report

Dear Mr. Klimek:

Enclosed are three copies of the Harris Nuclear Plant 2005 Environmental Monitoring Report. The report summarizes the results of water quality monitoring conducted by Progress Energy Carolinas, Inc. at the Harris Reservoir during 2005. During 2005, operational effects of the Harris Nuclear Plant on the water quality and aquatic life continued to be minimal.

Please contact Mr. Bob Wilson at (919) 362-2444 if you have any questions concerning this report or if you have a need for additional information.

Sincerely,

A handwritten signature in black ink, appearing to read 'Eric McCartney'.

**Harris Nuclear Plant
2005 Environmental Monitoring Report**

December 2006

Environmental Services Section

PROGRESS ENERGY SERVICE COMPANY

Harris Nuclear Plant 2005 Environmental Monitoring Report

The following is provided as a summary of the environmental monitoring activities performed on the Harris Reservoir in 2005. Due to the rotating schedule of assessing the fish community every other year, only the water quality and water chemistry was monitored during 2005. The attached two appendices include the data collected during 2005. The methods and analyses utilized were the same as in previous years.

The Harris Reservoir continued to show qualities of a typical, biologically productive, southeastern reservoir in 2005. Reservoir waters were well-mixed during late autumn and winter months with similar temperature and dissolved oxygen levels throughout the water column. Dissolved oxygen levels declined near the bottom with stratification during the late spring and summer. Nutrient concentrations remained similar to recent years and were in an acceptable range for a productive reservoir in this area with the exception of total nitrogen which was slightly elevated over previous years. Continued monitoring of the nitrogen concentrations and any potential impacts is ongoing.

Hydrilla stands reached the water surface in the intake canal in the Harris Reservoir during 2005. However, no fouling of the plant intake screens occurred. No stands of hydrilla were observed in the littoral zone of the Auxiliary Reservoir during 2005. The attempt to control hydrilla in the Auxiliary Reservoir by releasing grass carp appears to have been effective in reducing the quantity and area coverage of hydrilla.

Appendix 1. Water temperature, dissolved oxygen, conductivity, pH, and Secchi disk transparency data collected from Harris Reservoir during 2005.

Compliance Questionnaire:

Facility ID#: 0-006715

1. Mark the type(s) of Stage I Vapor Recovery being used:

(Mark all that apply for the facility)

- Coaxial system
- Dual point system
- Vapor recovery is not required at this facility (see instructions)

2. Mark the method(s) of leak detection being used for underground storage tanks:

(Mark all that apply for the facility)

- Tank tightness testing and inventory control*
- Automatic tank gauging
- Vapor monitoring
- Groundwater monitoring
- Interstitial monitoring
- Manual tank gauging (This method is not valid for tanks that are greater than 550 gallons in capacity)
- Manual tank gauging and tank tightness testing (This method is not valid for tanks that are greater than 2,000 gallons in capacity)*
- Statistical inventory reconciliation
- Other state approved method (specify) _____
- Leak detection not required at this facility because:
 - the USTs at this facility are not regulated (for example, the USTs at this facility store heating oil for on-site use) and/or
 - the USTs at this facility store fuel solely for use by emergency power generators

*USTs that have been protected against corrosion for more than ten years cannot use these methods of leak detection beyond Dec. 22, 1998.

3. Mark the method of leak detection being used for underground piping:

(Mark all that apply for the facility)

- Automatic line leak detector
- Periodic line tightness tests
- Interstitial monitoring of piping
- Groundwater monitoring
- Vapor monitoring
- Statistical inventory reconciliation
- Electronic Line Leak Detection
- Other state approved method (specify) _____
- Exempt under 40 CFR 280.41 (b) (2) (I) - (iv) (This exemption applies only to "European" suction systems.)
- Leak detection not required at this facility because:
 - the piping systems at this facility are not regulated (for example, the USTs at this facility store heating oil for on-site use) and/or
 - the USTs at this facility store fuel solely for use by emergency power generators

4. Mark if ALL regulated underground storage tank systems in operation at this location meet 12/22/98 upgrade requirements or 12/22/88 "new" UST system requirements:

- The USTs and associated piping in operation at this facility are fully compliant with the corrosion protection, spill protection and overfill prevention requirements for UST systems as described in Title 15A Subchapter 2N Section .0300.

(If tanks at this site are not regulated then do not check this box.)

I certify under penalty of law that the information on this form is correct and compliance with all applicable release detection, corrosion protection monitoring, spill protection and overfill prevention requirements has been achieved for the petroleum underground storage tanks located at this facility. I also certify compliance with all applicable Stage I vapor recovery requirements for this facility. Name and official title of owners(s) or authorized representative.

Response to RAI No. 1
Item 19

FEB 27 2004

SERIAL: HNP-04-041

Mr. Kenneth Schuster
Raleigh Regional Supervisor
North Carolina Department of Environment and Natural Resources
3800 Barrett Drive, Suite 101
Raleigh, NC 27602

Subject: Progress Energy Carolinas, Inc.
Shearon Harris Nuclear Plant
National Pollutant Discharge Elimination System Permit # NC0039586

Dear Mr. Schuster:

On February 23, 2004, Mr. Shannon Langley of the Raleigh Regional Office of the North Carolina Division of Environment and Natural Resources was notified via telephone by Mr. Steve Cahoon of Progress Energy's Environmental Services Section that an exceedance of the 2 hour time limit for chlorination had occurred at Outfall 001 (Cooling Tower Blowdown) of the Shearon Harris Nuclear Plant. The exceedance occurred as a result of a failed controller on one of the Sodium hypochlorite pumps. The facility is terming this an "upset" condition since by definition this was an exceptional incident in which there was an unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee.

On Monday, February 23, 2004, at approximately 8:30 a.m. an inspection of the Sodium hypochlorite pumps at the Cooling Tower revealed that the controller was stuck in the "on" position at one pump. It was estimated that the timer had been stuck in that position since approximately 9:00 p.m., Sunday, February 22, 2004. Over this period of time approximately 1,500 to 2,000 gallons of Sodium hypochlorite were pumped into the Cooling Tower. The plant went into mitigation mode as soon as the incident was discovered and began taking chlorine samples every 15 minutes. The first reading at 8:40 a.m. on Monday February 23, 2004, was 0.40 mg/l of free chlorine. This reading was below the maximum daily permit limit of 0.5 mg/l. Approximately 14 more readings were taken, and at 11:59 a.m. the reading was less than 0.1 mg/l. The controller on the pump has been taken out of service and the pump will be operated manually until the repair is made. An investigation is in progress to determine additional corrective actions. The investigation will focus on minimizing the probability of a similar event in the future.

As stated above, we consider the incident resulted from an upset condition. Attached are the facility's residual chlorine sample log sheets (sample location CTBD) for the week of February 16, through February 23, 2004, demonstrating the facility was operating properly prior to the incident. The facility has been operating the Sodium hypochlorite pumps in this manner for approximately 7 years without incident. In this particular event, when the controller failed and there was a continuous feed of Sodium hypochlorite to the Cooling Tower, other systems

SERIAL: HNP-04-041

Page 2

were functioning normally. Dechlorination using Ammonium bisulfite was working properly. However, the normal feed rate of the dechlorination agent was not sufficient to deal with the increased concentration from the upset. When mitigation mode was entered, more aggressive dechlorination actions were taken, which included increasing the chemical feed pump speed and adding additional Ammonium bisulfite from drums into the Cooling Tower Basin.

If you have any questions or comments regarding this information please contact Mr. Steve Cahoon at (919) 362-3568 or Mr. Bob Wilson at (919) 362-2444.

"I certify, under penalty of law, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who managed the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations."

Sincerely,

B. C. Waldrep

Harris Nuclear Plant
National Pollutant Elimination Discharge Permit (NPDES) No. NC0039586

Dear Mr. Schuster:

On September 3, 2004, representatives from Progress Energy (Mr. Chuck Wakild, Mr. Bob Wilson and Mr. Steve Cahoon) met with Ms. J.E. Garrett and yourself at the Raleigh Regional Office of the North Carolina Division of Environment and Natural Resources. The purpose of the meeting was to discuss a Notice of Violation (NOV) dated June 25, 2004, for the Harris Nuclear Plant (HNP). The following discussion serves as a summary of the events beginning on June 14, 2003, and a summary of the cooling tower system at the plant to aid in your evaluation that an "upset" condition occurred at the plant that caused a zinc exceedance in the cooling tower blowdown (Outfall 001) for the subject week.

On June 14, 2003, the HNP experienced a reactor trip at 10:55 a.m. A reactor trip is a safety feature where the plant is designed to automatically shut itself down. When the plant trips it no longer produces electricity. The heat source is lost which eliminates the steam, which is needed to turn the turbine and generate electricity. At the time of a plant trip operators are performing actions designed to keep the plant in balance and maintain plant safety as mandated by the plant's operating license which is issued by the Nuclear Regulatory Commission (NRC).

After these steps have been performed and the plant has been safely shutdown, the operators then reduce the flow to the Cooling Tower Basin. This is done by manually throttling down the flow control valve allowing more water to flow through the Cooling Tower By-pass Line. Normally approximately 18-19 million gallons per day (MGD) of water from the Cooling Tower Make-Up (CTMU) pumps bypasses the Cooling Tower with the remaining flow being used for Cooling Tower Blowdown (approximately 4 MGD) and evaporation (approximately 14 MGD). While all of the actions to stabilize the plant following a plant reactor trip are occurring, the Cooling Tower Blowdown (CTBD) increases (4 MGD plus the 14 MGD evaporation which stops due to lost of the heat source). The total return to the lake is 32-33 MGD (cooling tower blowdown + amount of water bypassing the cooling tower).

Progress Energy Carolinas, Inc.
Harris Nuclear Plant
P.O. Box 165
New Hill, NC 27562

Mr. Kenneth Schuster
SERIAL: HNP-04-136

During normal plant operations the CTMU pumps supply water through the manually operated flow control valve, into the plant to the normal service water (NSW) pumps. All of the chemicals for protecting the plant piping from corrosion including zinc are added by automatic feed (based on the amount of cooling tower blowdown) to the service water at the NSW pumps. This water is then pumped through the plant condenser and sent back to the cooling tower to be reused, discharged as blowdown to the lake or to be evaporated into the atmosphere.

As explained above, when the plant tripped it caused the Cooling Tower to increase discharge due to the drastic reduction in evaporation rate. CTBD flow increased from ~3600 gpm to ~8000 gpm. The large increase in CTBD flow signaled the zinc pumps (computer controlled) to increase feed rate to compensate for the flow change. The zinc feed rate went from ~6-7 gpd to ~17 gpd. The CTBD flow was decreased by Operations within hours back to normal flow values. The zinc pump controls returned to the reduced feed rate in correlation with CTBD flow decrease. The excess zinc remained in the Cooling Tower Basin until it was either consumed by the corrosion treatment process or blown down to Harris Lake.

For the NPDES sample taken on June 16, 2003, the analysis showed an increased concentration of zinc in the effluent (which exceeded the permit limit) due to the increased feed rate of the zinc pump. Another contributing factor resulting in increased zinc in the effluent is temperature. At normal operating temperatures the zinc coats the carbon steel pipes, (to aid in corrosion prevention) at lower temperatures, during a shutdown, more zinc remains soluble in water thus allowing more zinc to be discharged in the effluent.

Effluent samples were taken on June 16, 2003, and sent to the certified laboratory for zinc analysis. Because metals samples have a long holding time (6 months) the samples were not analyzed quickly. The lab analyzes its metals samples in batch mode and the sample was not analyzed until June 25, 2003. The HNP was unaware of the exceedance until the laboratory results were received on June 26, 2003. The Raleigh Regional office was notified of the exceedance of the permit limit via phone call on June 26, 2003, and via a 5 day follow-up letter from the plant dated July 1, 2003.

In an attempt to mitigate any further problems with the zinc pumps the Chemistry Supervisor issued a night order with guidance on securing zinc pumps directly after a plant trip. Following completion of the investigation, a corrective action was implemented which programmed the zinc pumps to not exceed the rate of 7 gallons per day no matter how much increase there is in CTBD.

We hope you find this information useful in your evaluation of the events that occurred at the HNP the week of June 14, 2003. In our opinion the events described above meet the definition of an "upset" as described in our NPDES permit (Permit No. NC0039586). We respectfully request the NOV dated June 25, 2004, be withdrawn.

If you have any questions please contact Mr. Bob Wilson at (919) 362-2444 or Mr. Steve Cahoon at (919) 362-3568.

Subject: Retraction of Notice of Violation and Assessment of Civil Penalty
Case No. LV-2004-0173
Shearon Harris Nuclear Power Plant, NPDES Permit No. NC0039586
Wake County

Dear Mr. Waldrup:

The Raleigh Regional Office staff have reviewed your response to your letter dated October 7, 2004 in which you have described the events that occurred June 14, 2003 which resulted in zinc concentrations in the cooling tower effluent being discharged in excess of the NPDES Permit limit. Your letter followed a meeting in our office that occurred on September 3, 2004 concerning the contested case that your company filed. The contested case was in response to a fine issued by this office for an exceedance of the daily maximum limitation for zinc for June 16, 2003.

Your letter described the events of an automatic shutdown of the Shearon Harris Nuclear Power Plant that occurred on June 14, 2003 and stated that you and your staff believe that these circumstances fit the definition of upset as set forth in the NPDES Permit. You have further stated that you have put a plan in place to prevent further problems of this sort in the future caused by an automatic shut down.

We agree that these circumstances meet the criteria to be considered an upset as described in the NPDES Permit. Therefore, I hereby retract the Notice of Violation and Assessment of Civil Penalty, LV 2004-0173 dated June 25, 2004.

If you have questions, please call Judy Garrett or myself at (919) 571-4700.

Sincerely,

Kenneth Schuster, PE.

RE: Draft Water Quality Monitoring Plan – Harris Nuclear Plant Landfill (Permit # 92-10)

Dear Mr. Waldrep:

The Draft Ground Water Monitoring Plan for the Harris Nuclear Plant Industrial Landfill has been reviewed. The Solid Waste Section approves the plan as submitted. Water quality monitoring must conform to the specifications outlined in the plan. All modifications to the plan must receive prior approval from this agency before being implemented.

Thank you for your cooperation. If you have any questions, please call me at (919) 733-0692, extension 257.

Sincerely,

Larry Rose

Draft Ground Water Monitoring Plan

Dear Mr. Rose,

As requested in a letter from the Division of Waste Management dated April 1, 2004, please find enclosed 1 copy of a draft Groundwater Monitoring Plan for the Harris Nuclear Plant's Industrial Landfill for your review. This plan was drafted to reflect the requirements of 15A NCAC 13B .0600 and the Division's *Groundwater Monitoring Guidance Document*.

If you have any questions or comments please contact Mr. Steve Cahoon of Progress Energy's Environmental Services Section. Mr. Cahoon can be reached via telephone at (919) 362-3568 or via e-mail at steve.cahoon@pgnmail.com.

Sincerely,

INTRODUCTION

During the construction of the Harris Nuclear Plant (HNP) several landfills were permitted, utilized and closed. The current landfill was permitted as a Construction and Demolition landfill under Permit #92-A in 1983. The landfill consisted of 3 areas of varying sizes, Area #1 was 6.71 acres, Area #2 was 9.47 acres and Area #3 was 17.2 acres. In 1986 HNP received approval under permit #92-10 to convert Areas #2 and #3 to a sanitary landfill which allowed for the disposal of solid waste. Approximately 25% of Area #3 was used for waste disposal. Areas #1 and #2 were never used for waste disposal. Area #3 was divided into 3 cells. Cell #1 ceased to accept waste in the fall of 1989. Cell #2 was never utilized for waste disposal, and Cell #3 was capped in the fall of 2003. Presently, sampling is conducted by Progress Energy employees, however in the future the sampling may be contracted to a certified laboratory.

MONITORING WELLS

HNP has monitored groundwater around the landfill since 1987. The sampling program has involved routine (semi-annual) sampling and analysis of five monitoring wells that were installed in December 1986. Monitoring wells MW-1, MW-2, and MW-3 (Figure 1) are located within ¼ mile of the landfill. Monitoring wells MW-4 and MW-5 are located greater than ¼ mile from the landfill. Since monitoring wells MW-4 and MW-5 are not useful for groundwater monitoring, they have been abandoned. A geophysical study was conducted for HNP by G. N. Richardson & Associates, Inc. to evaluate the location of waste in the landfill and to identify any potential water bearing fractures in the vicinity of the landfill for the potential location of additional groundwater monitoring wells. The study identified the location for two additional wells MW-6 and MW-7 (Figure 1). HNP owns all the land within approximately 0.7 miles of the landfill (Figure 2).

WELL CONSTRUCTION

Monitoring wells MW-1, MW-2, and MW-3, were constructed in December 1986. The well screen depths range from 35 to 97 feet below ground surface and groundwater levels at the time of installation ranged from 19 to 52 feet below ground surface. The low permeability of Triassic soils at the site cause groundwater recovery rates to be very slow. During sampling events the wells are bailed dry. It is then necessary to wait two or three days before enough groundwater is available in each well to obtain a sufficient sample. Monitoring wells MW-6 and MW-7 were constructed in December 2003, to replace monitoring wells MW-4 and MW-5 which were abandoned. These wells were constructed in accordance with 15A NCAC 2C, Well Construction Standards (See Attached Well Construction Logs).

PORTABLE MONITORING

HNP will use Teflon portable bailers to conduct purging and monitoring of groundwater. Each bailer will be equipped with either nylon rope, Teflon coated wire, single stranded stainless steel wire, or another monofilament line. New line will be used for each well sampled and all unused line will be protected from contamination.

Equipment Cleaning Procedures

All equipment coming into contact with samples or ground water inside a monitoring well will be cleaned within an established and properly maintained laboratory. No field cleaning of bailers will be permitted. A Teflon bailer will be assigned to each well, as to further eliminate the possibility of contamination. All Teflon bailers will be cleaned as follows:

- 1) Phosphate free soap and tap water wash
- 2) Tap water rinse
- 3) 10% nitric or hydrochloric acid soak
- 4) De-ionized or Distilled water rinse
- 5) Isopropyl alcohol rinse
- 6) De-ionized or Distilled water rinse
- 7) Air dry
- 8) Aluminum foil wrap with shiny side out

The water level indicator will also be cleaned between the sampling of monitoring wells. Water level indicator cables and probes will be decontaminated before and between well usage and transported in a manner to prevent contamination.

The plant may purchase preconditioned disposable teflon bailers (cleaned to EPA protocol) from a laboratory supplier instead of following the above cleaning procedure.

PURGING METHODS

The HNP landfill is located on the Harris Plant Lands within the Triassic basin. The protocol for purging these wells is somewhat different from the standard purging method used at most sites. The low permeability of soils in this basin cause very slow groundwater recovery rates. During sampling events wells will be bailed dry and then

allowed two to three days to recharge. After sufficient recharging, a representative sample of the ground water in the vicinity of the well will be collected.

All water levels in the wells will be measured and recorded with an electronic indicator prior to purging any of the wells.

SAMPLE COLLECTION

Representative samples will be taken from all ground water wells. All sampling equipment will be properly decontaminated. Proper sampling and sample handling technique will be used. Nothing will be placed inside the well casing that has not been decontaminated. To further eliminate the possibility of contamination during sampling there will be frequent glove changes.

Once the well cap is removed from the casing, all equipment and sampling procedures will be performed while wearing gloves. Care will be taken to ensure bailers and other sampling equipment do not come into contact with anything other than the well contents.

Each monitoring well will be treated as a separate entity. Therefore, there will be enough decontaminated sampling equipment for each well; no sampling equipment will be used between sampling wells.

HNP will conduct semi-annual sampling of the five monitoring wells around the landfill (MW-1, MW-2, MW-3, MW-6, and MW-7) for a minimum of 5 years post closure (or as directed by the North Carolina Department of Environment and Natural Resources). HNP may petition the Solid Waste Section for either reduction or cessation of groundwater monitoring after the five year period.

Sampling Containers

There will be several different types of containers used for sampling purposes because of the wide array of parameters that must be analyzed. All sampling containers will be properly decontaminated before use. The number of containers used for sampling collection and the use of acid preservation will follow the rules established by the laboratory analyzing the samples.

Sampling Order

Samples will be collected in the following order at each well: Volatile Organic Compounds (VOC's) and total metals.

HNP will monitor the groundwater wells for the following parameters based on the 8 RCRA metals and the 47 VOC's. The following is the list of parameters for which the ground water wells will be monitored:

Arsenic	1,2-dibromo-3-chloropropane	Methyl ethyl ketone
Barium	1,2-Dibromoethane	Methyl iodide
Cadmium	o-Dichlorobenzene	4-Methyl-2-pentanone
Chromium	p-Dichlorobenzene	Styrene
Lead	Trans-1, 4-Dichloro-2-butene	1,1,1,2-Tetrachloroethane
Mercury	1,1-Dichloroethane	1,1,2,2-Tetrachloroethane
Selenium	1,2-Dichloroethane	Tetrachloroethylene
Silver	1,1-Dochloroethylene	Toluene
Acetone	cis-1,2-Dichloroethylene	1,1,1-Trichloroethane
Acrylonitrile	trans-1, 2-Dichloroethylene	1,1,2-Trichloroethane
Benzene	1,2-Dichloropropane	Trichloroethylene
Bromochloromethane	cis-1,3-Dichloropropene	Trichloroflouromethane
Bromoform	trans-1,3-Dichloropropene	1,2,3-Trichloropropane
Carbon disulfide	Ethylbenzene	Vinyl acetate
Carbon tetrachloride	2-Hexanone	Vinyl chloride
Chlorobenzene	Methyl bromide	Xylene
Chloroethane	Methyl chloride	Bromodichloromethane
Chloroform	Methylene bromide	
Dibromochloromethane	Methylene chloride	

TRANSPORTATION AND STORAGE OF SAMPLES

Upon completion of sample collection, all samples will be stored on ice or in a refrigerator until the samples are transported to a certified state laboratory for analysis. Samples will be stored in such a manner as to prevent breakage or accidental spillage. Unless circumstances prevent otherwise, all samples collected will be delivered to the laboratory on the same day as collected. There will be no field filtering of samples.

Chain of Custody

A Chain-of-Custody form will be completed and accompany each sample to the laboratory. The chain-of-custody form will contain the following: Sample number, signature of collector, date and time of collection, sample time, well identification, total number of containers, signature(s) of person involved in chain-of-possession and inclusive dates of possession.

QUALITY ASSURANCE/QUALITY CONTROL

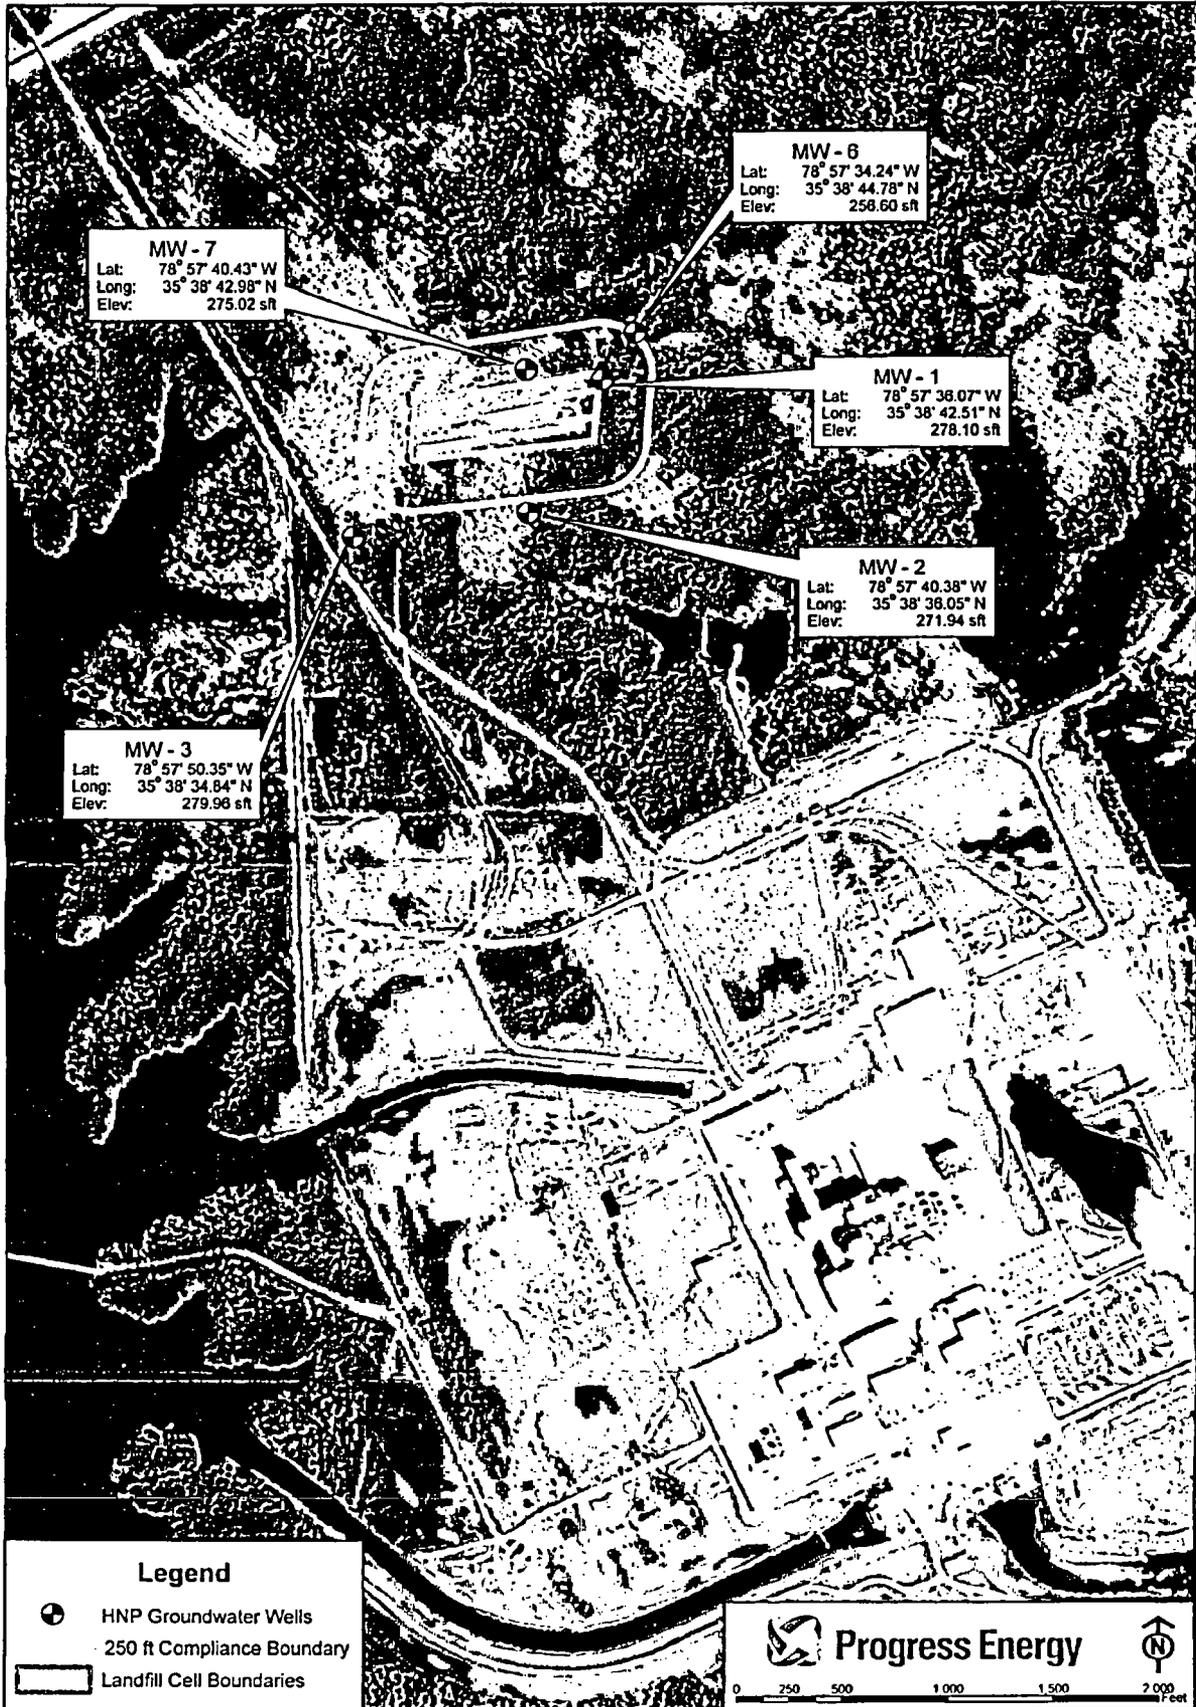

Since all wells have been established at the Landfill site and we have many years of data, sampling will be conducted on a semi-annual basis. Each well sampling event will include the following field parameters: pH, and specific conductivity. One equipment and one trip blank will be analyzed with each sampling event.

Monitoring data, quality assurance/quality control data, chain-of-custody records, and any other required information will be submitted to the Solid Waste Section within 15 days of receipt by the facility.

All monitoring samples will be analyzed by a laboratory certified under the Division of Environmental Management (DEM) certification program.

SURFACE WATER MONITORING

The landfill site does not border any surface water. The closest surface water to the landfill site is Harris Lake which is approximately 800 feet away. Therefore no surface water sampling is part of this monitoring plan.

Mr. Ken Schuster, Water Quality Supervisor
Raleigh Regional Office
Department of Environment and Natural Resources
1628 Mail Service Center
Raleigh, N. C. 27699-1628

Subject: Harris Nuclear Plant
National Pollutant Discharge Elimination System (NPDES) Permit No. NC0039586
Non-Discharge Permit Application for Pump and Haul of Wastewater

Dear Mr. Schuster:

The Harris Nuclear Plant (HNP) is requesting approval to transport domestic sewage from Outfall No. 002 to Outfall No. 007 of the above referenced NPDES Permit. HNP is scheduled to have an outage in the spring (approximately April 1 through May 31), and this outage will mean an influx of approximately 1,000 temporary workers to support outage activities. Concurrently, the influx of workers for the outage could overburden the existing on-site sewage treatment plant. Therefore, we are requesting a Pump and Haul permit from the Division of Water Quality to allow HNP, if necessary, to pump and haul domestic wastewater from the on-site sewage treatment plant to the sewage treatment plant at the Harris Energy and Environmental Center. Both outfalls are permitted under the same NPDES Permit (NC0039586).

Attached are the completed Non-Discharge Pump and Haul Permit Application, a check for the \$675.00 application fee, and letters of agreement from the Harris Energy and Environmental Center (sludge hauler and receiver), and drawings depicting the location of the pump and valve used for sludge transfer. It is requested that the permit have an effective date of April 1, 2006.

Progress Energy Carolinas, Inc. appreciates the continued cooperation demonstrated by the North Carolina Division of Water Quality staff in responding to its permitting needs. If you have any questions or comments regarding this request, please contact Mr. Bob Wilson at (919) 362-2444 or Mr. Steve Cahoon at (919) 546-7457.

Sincerely,

A handwritten signature in cursive script that reads "Eric McCartney".

Non-Discharge Pump and Haul Permit Application**

Application Number: _____ (to be completed by DWQ for new projects)

I. GENERAL INFORMATION:

1. Applicant (corporation, individual, other): Shearon Harris Nuclear Plant
2. Print owners or signing official's name and title (person legally responsible for the facility and its compliance):
Eric A. McCartney – Plant General Manager
3. Mailing address of applicant: 5413 Shearon Harris Road
City: Raleigh State: NC Zip: 27562
Telephone number: (919) 362-2000 Facsimile number: (919) 362-2483
Email Address: eric.mccartney@pgnmail.com
4. Project name (facility or establishment): Pump and Haul RFO 13
5. County where project is located: Wake
6. Fee submitted: \$ 675.00 (See Instruction B.)
7. Name and complete address of engineering firm: McKim & Creed 200 MacKenan Ct.

City: Cary State: NC Zip: 27511
Telephone number: (919) 233-8091 Facsimile number: (919) 233-8031
8. Name and affiliation of contact person who can answer questions about project: Steve Cahoon
Progress Energy Email Address: steve.cahoon@pgnmail.com

II. PERMIT INFORMATION:

1. If this application is being submitted as a result of a modification to or renewal of an existing permit, please provide the existing permit number NA and the issuance date NA
2. Specify whether the applicant is: public _____ or private Private

7. What type of tank or container will the wastewater be pumped from and what is the volume of this container? _____
Wastewater will be pumped from two raw water storage tanks with a volume of 22,000 & 28,000 gallons.
8. Is the tank or container already in place or will it be installed for these activities? In place
9. What type of high water alarm does the container have? Visual X Auto dialer _____

VII. OWNER'S SIGNATURE:

Applicant's Signature and Certification:

I, Eric A. McCartney, attest that this application for Pump and Haul Permit
 _____ has been reviewed by me and is accurate and complete to the best of my knowledge. I understand that if all required parts of this application are not completed and that if all required supporting information and attachments are not included, this application package will be returned to me as incomplete. Note: In accordance with NC General Statutes 143-215.6A and 143-215.6B, any person who knowingly makes any false statement, representation, or certification in any application shall be guilty of a Class 2 misdemeanor which may include a fine not to exceed \$10,000 as well as civil penalties up to \$25,000 per violation.

Mr. Barry Herzberg
North Carolina Department of Environment and Natural Resources
Division of Water Quality, Raleigh Regional Office
1628 Mail Service Center
Raleigh, North Carolina 27699-1628

Subject: Domestic Wastewater Pump and Haul Permit No. WQ0030120
Progress Energy Carolinas, Inc.
Harris Nuclear Plant, Wake County
May 2006 Report

Dear Mr. Herzberg:

As specified in Condition 12 of the subject permit, Progress Energy Carolinas, Inc. (PEC) is required to submit a monthly report of the specified wastewater pump and haul records to your office on or before the 10th day of the following month. The attached form contains the information required by this condition of the permit.

As identified in the application for the permit, the pump and haul was a temporary activity to support a refueling outage at the facility. Condition 18 of the permit requires PEC to provide written notification when pump and haul activities are no longer necessary. This letter provides notification that the refueling outage has been completed and the temporary pump and haul activities are no longer necessary. PEC has resumed normal waste treatment operations.

PEC appreciates the assistance provided by the staff at the Raleigh Regional Office in matters related to its NPDES permits. If you have any questions or require additional information, please contact Mr. Bob Wilson at (919) 362-2444 or Steve Cahoon at (919) 546-7457.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Eric McCartney'.

Submittal of Collection System Sanitary Sewer Overflow Reporting Form

Dear Mr. Schuster:

Enclosed is the completed Collection System Sanitary Sewer Overflow Reporting Form for the sanitary sewage overflow incident (#200400351) which occurred at the Harris Energy and Environmental Center on February 18, 2004. The incident was initially reported via phone conversation between Mr. Steve Cahoon, Progress Energy Carolinas, Inc. and Mr. Mitch Hayes, Division of Water Quality on February 18, 2004.

The overflow incident occurred as a result of a pine tree root wrapping itself around a pipe fitting causing the fitting to fail. Due to the quick response of onsite personnel (immediate shut down of the lift station) it was estimated that approximately 250 gallons of sewage was spilled to ground, with approximately 25 gallons estimated to reach Little White Oak Creek, approximately 750 feet away from the spill site. Stallings Pump Service was called to pump the remaining sewage from the lift station and transport it to the sewage treatment plant. Affected areas were disinfected to eliminate any possible pathogens.

If there are any questions concerning the information contained in this submittal, please contact Mr. Bob Wilson at (919) 362-2444 or Mr. Steve Cahoon at (919) 362-3568.

Sincerely,

A handwritten signature in black ink, appearing to read "B. C. Waldrep".

City: New Hill, NC County: Wake

Source of SSO (check applicable) : Sanitary Sewer Pump Station

SPECIFIC location of the SSO (be consistent in description from past reports or documentation - i.e. Pump Station 6, Manhole at Westall & Bragg Street, etc.) : HEEC Main Lift Station

Latitude (degrees/minute/second): 35 38.86' N Longitude(degrees/minute/second): 78 55.55' W

Incident Started Dt: 02-18-2004 Time: 1:30 pm Incident End Dt: 02-18-2004 Time: 2:30 pm
(mm-dd-yyyy) hh:mm AM/PM (mm-dd-yyyy) hh:mm AM/PM

Estimated volume of the SSO: 250 gallons Estimated Duration (Round to nearest hour): 1

Describe how the volume was determined: Duration of event, size of pipe and lift station, time of day, daily flow at that time, number of people onsite at that time

Weather conditions during SSO event: Partly Sunny

Did SSO reach surface waters? Yes No Unknown Volume reaching surface waters (gallons): 25

Surface water name: Little White Oak Creek

Did the SSO result in a fish kill? Yes No Unknown If Yes, what is the estimated number of fish killed? _____

SPECIFIC cause(s) of the SSO:

- Severe Natural Condition
- Grease
- Roots
- Inflow and Infiltration
- Pump Station Equipment Failure
- Power outage
- Vandalism
- Debris in line
- Other (Please explain in Part II)

Immediate 24-hour verbal notification reported to: Mitch Hayes

DWQ Emergency Mgmt. Date (mm-dd-yyyy): 02-18-2004 Time (hh:mm AM/PM): 4:20 pm

? If an SSO is ongoing, please notify Regional Office on a daily basis until SSO can be stopped.

Per G.S. 143-215.1C(b), the responsible party of a discharge of 1,000 gallons or more of untreated wastewater to surface waters shall issue a press release within 48-hours of first knowledge to all print and electronic news media providing general coverage in the county where the discharge occurred. When 15,000 gallons or more of untreated wastewater enters surface waters, a public notice shall be published within 10 days and proof of publication shall be provided to the Division within 30 days. Refer to the referenced statute for further detail.

The Director, Division of Water Quality, may take enforcement action for SSOs that are required to be reported to Division unless it is demonstrated that:

- 1) the discharge was caused by severe natural conditions and there were no feasible alternatives to the discharge; or
- 2) the discharge was exceptional, unintentional, temporary and caused by factors beyond the reasonable control of the Permittee and/or owner, and the discharge could not have been prevented by the exercise of reasonable control.

Part II must be completed to provide a justification claim for either of the above situations. This information will be the basis for the determination of any enforcement action. Therefore, it is important to be as complete as possible.

WHETHER OR NOT PART II IS COMPLETED, A SIGNATURE IS REQUIRED AT THE END OF THIS FORM.

ANSWER THE FOLLOWING QUESTIONS FOR EACH RELATED CAUSE CHECKED IN PART I OF THIS FORM AND INCLUDE THE APPROPRIATE DOCUMENTATION AS REQUIRED OR DESIRED

COMPLETE ONLY THOSE SECTIONS PERTAINING TO THE CAUSE OF THE SSO AS CHECKED IN PART I

In the check boxes below, NA = Not Applicable and NE = Not Evaluated

A HARDCOPY OF THIS FORM SHOULD BE SUBMITTED TO THE APPROPRIATE DWQ REGIONAL OFFICE UNLESS IT HAS BEEN SUBMITTED ELECTRONICALLY THROUGH THE ONLINE REPORTING SYSTEM

Severe Natural Condition (hurricane, tornado, etc.)

Describe the "severe natural condition" in detail.

How much advance warning did you have and what actions were taken in preparation for the event?

Comments:

Grease (Documentation such as cleaning, inspections, enforcement actions, past overflow reports, educational material and distribution date, etc. should be available upon request.)

When was the last time this specific line (or wet well) was cleaned? _____

Do you have an enforceable grease ordinance that requires new or retrofit of grease traps/interceptors?

Yes No NA NE

Have there been recent inspections and/or enforcement actions taken on nearby restaurants or other nonresidential grease contributors?

Yes No NA NE

Explain.

Have there been other SSOs or blockages in this area that were also caused by grease?

Yes No NA NE

When? _____

If yes, describe them:

Have cleaning and inspections ever been increased at this location?

Yes No NA NE

Explain.

Have educational materials about grease been distributed in the past?

Yes No NA NE

When?

and to whom?

Explain?

If the SSO occurred at a pump station, when was the wet well and pumps last checked for grease accumulation?

Were the floats clean?

Yes No NA NE

Comments:

Roots

Do you have an active root control program?

Yes No NA NE

Describe

Roots are controlled by tree removal. Although principally for aesthetics, a secondary benefit is root control, 75 trees were removed on the HEEC campus last fall, several in the vicinity of the sewer line.

Have cleaning and inspections ever been increased at this location because of roots?

Yes No NA NE

Explain:

There has been no cause to increase inspections, this is the first incident.

What corrective actions have been accomplished at the SSO location (and surrounding system if associated with the SSO)? The fitting that failed was replaced with a mechanical fitting, also tree roots in the area of the failure were trimmed.

What corrective actions are planned at the SSO location to reduce root intrusion?

Continued use of tree removal program.

Has the line been smoke tested or videoed within the past year?

Yes No NA NE

If Yes, when?

Comments:

Inflow and Infiltration

Are you under an SOC (Special Order by Consent) or do you have a schedule in any permit that addresses I/I?

Yes No NA NE

Explain if Yes:

What corrective actions have been taken to reduce or eliminate I & I related overflows at this spill location within the last year?

Has there been any flow studies to determine I/I problems in the collection system at the SSO location? Yes No NA NE

If Yes, when was the study completed and what actions did it recommend?

Has the line been smoke tested or videoed within the past year? Yes No NA NE

If Yes, when and indicate what actions are necessary and the status of such actions:

Are there I/I related projects in your Capital Improvement Plan? Yes No NA NE

If Yes, explain:

Have there been any grant or loan applications for I/I reduction projects? Yes No NA NE

If Yes, explain:

Do you suspect any major sources of inflow or cross connections with storm sewers? Yes No NA NE

If Yes, explain:

Have all lines contacting surface waters in the SSO location and upstream been inspected recently? Yes No NA NE

If Yes, explain:

What other corrective actions are planned to prevent future I/I related SSOs at this location?

Comments:

Pump Station Equipment Failure (Documentation of testing, records etc., should be provided upon request.)

What kind of notification/alarm systems are present?

Auto-dialer/telemetry (one-way communication)

Yes

Audible

Yes

Visual

Yes

SCADA (two-way communication)

Yes

Emergency Contact Signage

Yes

Other

Yes

Describe the equipment that failed?

What kind of situations trigger an alarm condition at this station (i.e. pump failure, power failure, high water, etc.)?

Were notification/alarm systems operable?

Yes No NA NE

If no, explain:

If a pump failed, when was the last maintenance and/or inspection performed?

What specifically was checked/maintained?

If a valve failed, when was it last exercised?

Were all pumps set to alternate?

Yes No NA NE

Did any pump show above normal run times prior to and during the SSO event?

Yes No NA NE

Were adequate spare parts on hand to fix the equipment (switch, fuse, valve, seal, etc.)?

Yes No NA NE

Was a spare or portable pump immediately available?

Yes No NA NE

If a float problem, when were the floats last tested? How?

If an auto-dialer or SCADA, when was the system last tested? How?

Comments:

Power outage (Documentation of testing, records, etc., should be provided of alternative power source upon request.)

What is your alternate power or pumping source?

On-Site Generator w/ATS

Did it function properly?

Yes No NA NE

Describe?

When was the alternate power or pumping source last tested under load?

If caused by a weather event, how much advance warning did you have and what actions were taken to prepare for the event?

Comments:

Vandalism

Provide police report number:

Was the site secured?

Yes No NA NE

If Yes, how?

**Padlocked Control Panel
Fence with Locked Gate**

Have there been previous problems with vandalism at the SSO location?

Yes No NA NE

If Yes, explain:

What security measures have been put in place to prevent similar occurrences in the future?

Yes No NA NE

Comments:

Debris in line (Rocks, sticks, rags and other items not allowed in the collection system, etc.)

What type of debris has been found in the line?

How could it have gotten there?

Are manholes in the area secure and intact?

Yes No NA NE

When was the area last checked/cleaned? _____

Have cleaning and inspections ever been increased at this location due to previous problems with debris? Yes No NA NE

Explain:

Are appropriate educational materials being developed and distributed to prevent future similar occurrences? Yes No NA NE

Comments:

Other (Pictures and a police report should be available upon request.)

Describe:

Were adequate equipment and resources available to fix the problem? Yes No NA NE

If Yes, explain:

If the problem could not be immediately repaired, what actions were taken to lessen the impact of the SSO?

Comments:

For DWQ Use Only:

DWQ Requested an Additional Written Report: Yes No NA NE

If Yes, What Additional Information is Needed:

Comments:

As a representative for the responsible party, I certify that the information contained in this report is true and accurate to the best of my knowledge.

Subject: Progress Energy Carolinas, Inc.
Erosion Control Plan for Landscaping Near Harris Plant

Dear Mr. Holley:

Progress Energy Carolinas, Inc. (PEC) is submitting the enclosed erosion control plan for land disturbing near the Harris Plant in southwestern Wake County.

PEC proposes to “stump” and minimally grade areas adjacent to existing roadways near the plant entrance. The grading will be done only to facilitate routine mowing of the cleared areas. Minor drainage work on a portion of the roadway will be included. The proposed work is similar to, but separate from, work previously undertaken at the Harris Plant related to tree cutting adjacent to distribution line rights-of-way. That earlier work has been completed and stabilized.

If you have any questions, please contact Mr. Bob Wilson at (919) 362-2444 or Mr. Buzz Bryson in our Environmental Services Section at (919) 546-6637 or by e-mail at buzz.bryson@pgnmail.com.

Sincerely,

A handwritten signature in black ink that reads 'Eric McCartney'.

FINANCIAL RESPONSIBILITY /OWNERSHIP FORM
SEDIMENTATION POLLUTION CONTROL ACT

No person may initiate a land-disturbing activity on one or more acres as covered by the Act before this form and an acceptable erosion and sedimentation control plan have been completed and approved by the Land Quality Section, NC Department of Environment, and Natural Resources. (Please type or print and, if question is not applicable, place N/ A in the blank).

Part A.

1. Project Name Electrical Distribution Right of Way Clearing – Phase 2
2. Location of land-disturbing activity: County Wake
City or Township Buckhorn, and Highway/Street SR 1134 Shearon Harris Road
3. Approximate date land-disturbing activity will be commenced: September, 2005
4. Purpose of development (residential, commercial, industrial, etc.): Utility ROW Clearing
5. Total acreage disturbed or uncovered (including off-site borrow and waste areas): 11.0 acres

6. Amount of fee enclosed \$ 550
7. Has an erosion and sedimentation control plan been filed? Yes XX No _____
Enclosed XX
8. Person to contact should sediment control issues arise during land-disturbing activity.
Name Larry Garner Telephone 919-362-2255
9. Landowner(s) of Record (Use blank page to list additional owners):

ELECTRICAL DISTRIBUTION RIGHT OF WAY CLEARING – PHASE 2
PROGRESS ENERGY – SHEARON HARRIS NUCLEAR POWER PLANT
SEDIMENTATION AND EROSION CONTROL PLAN

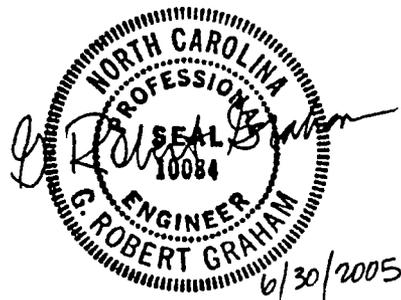

NARRATIVE - The purpose of the project is to clear rights of way for electrical distribution lines serving the Shearon Harris Nuclear Power Plant. The site is located in the southwest corner of Wake County in the Thomas Creek drainage area of the Cape Fear River basin.

The erosion control measures are designed to minimize erosion during clearing, to minimize off-site sedimentation and to provide stabilization of the disturbed areas after tree removal.

The soils on the site are typical piedmont sandy clays. The rights of way include several ditches which will be reconstructed with flatter side slopes and reinforced with turf reinforcement matting.

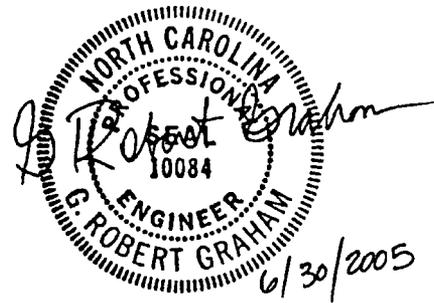

Where the power line alignment crosses creeks, we have called for silt fence to prevent off site sedimentation. Rock check dams are also used in some areas.

The work is to begin as soon as all permits are acquired and be completed in 4 months. The seeding will be completed within 30 days of completion of work in a given area.

CALCULATIONS
FLOW, VELOCITY AND SHEAR STRESS IN DITCHES
ELECTRICAL DISTRIBUTION RIGHT OF WAY CLEARING – PHASE 2
PROGRESS ENERGY - HARRIS NUCLEAR PLANT
NEW HILL, NC

The following calculations were prepared based on the worst case ditch slope and a maximum flow of 3.0 cfs using the software of the North American Green Company. Based on the results of these calculations, we have specified a turf reinforcement mat in all regarded ditches.

NORTH AMERICAN GREEN EROSION CONTROL MATERIALS DESIGN SOFTWARE VERSION 4.3
NORTH AMERICAN GREEN CHANNEL PROTECTION - ENGLISH/S.I.
USER SPECIFIED CHANNEL LINING BACK-UP COMPUTATIONS

PROJECT NAME: Progress Energy PROJECT NO.: 04056.02
COMPUTED BY: Daniel Woods DATE: 6/13/2005
FROM STATION/REACH: TO STATION/REACH:
DRAINAGE AREA: DESIGN FREQUENCY:

INPUT PARAMETERS

Channel Discharge : 3.0 cfs (.08 m³/s)
Peak Flow Period : 1 hours
Channel Slope : 0.035 ft/ft (0.035 m/m)
Channel Bottom Width : .0 ft (.00 m)
Left Side Slope : 4:1
Right Side Slope : 4:1

Channel Lining : SC250 Staple E Bunch 50-75%
Permi. Shear(Tp) :7.00 psf (335.2 Pa)
Phase = 2
Class = D Vegetation
Soil = Loam
Allowable Soil Shear(Ta):2.5 psf (119.7 Pa)

CALCULATIONS

Initial Depth Estimate = $0.16 * (3.0 / (0.035^{0.5}))^{0.375} = 0.45 \text{ ft } (.14 \text{ m})$
Final Channel Depth (after 7 iterations) = .47 ft (0.14 m)
Flow Area = $(0.0 * 0.5) + (0.5 * 0.47^2 * (4.0 + 4.0)) = 0.9 \text{ sq.ft } (0.1 \text{ m}^2)$
Wet Per. = $0.0 + (0.5 * (((4.0^2) + 1)^{.5} + ((4.0^2) + 1)^{.5})) = 3.8 \text{ ft } (1.2 \text{ m})$
Hydraulic Radius = $(0.9 / 3.8) = 0.2 \text{ ft } (0.1 \text{ m})$
Channel Velocity = $(1.486 / 0.030) * (0.2^{0.667}) * (0.035^{.5}) = 3.4 \text{ fps } (1.0 \text{ m/s})$

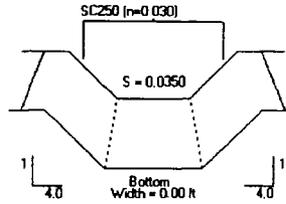

Channel Effective Manning's Roughness = 0.030
Calculated Shear (Td) = $62.4 * 0.47 * 0.035 = 1.02 \text{ psf } (48.8 \text{ Pa})$
Safety Factor = $(Tp / Td) = (7.00 / 1.02) = 6.87$

Effective Stress on Blanket(Te) = $1.0 * (1 - 0.40) / (0.030)^2 = 1.09 \text{ psf } (52.0 \text{ Pa})$

Safety Factor = $(T_a/T_e) = (2.50 / 1.087) = 2.30$

HYDRAULIC RESULTS

Discharge (cfs)	Peak Flow Period (hrs)	Velocity (fps)	Area (sq.ft)	Hydraulic Radius (ft)	Normal Depth (ft)
3.0	1.0	3.44	0.87	0.23	0.47

LINER RESULTS

Not to Scale

Reach	Matting Type	Stability Analysis	Vegetation Characteristics				Permissible Shear Stress (psf)	Calculated Shear Stress (psf)	Safety Factor	Remarks
	Staple Pattern		Phase	Class	Type	Density				
Straight	SC250	Vegetation	2	D	Bunch	50-75%	7.00	1.02	6.87	STABLE
	Staple E	Soil	Loam				2.500	1.087	2.30	STABLE

Re: Shearon Harris Nuclear Power Plant, Wake and Chatham County, NC

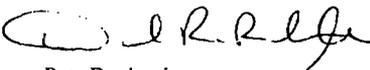

Dear Dave Corlett:

Thank you for your letter, dated November 16, 2005, requesting comments from the U.S. Fish and Wildlife Service on the subject project. Our comments are submitted pursuant to, and in accordance with, provisions of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq.) (Act).

Based on the information provided and other information available, it appears that the proposed project is not likely to adversely affect any federally-listed endangered or threatened species, their formally designated critical habitat, or species currently proposed for listing under the Act. We believe that the requirements of section 7(a)(2) of the Act have been satisfied. Please remember that obligations under section 7 consultation must be reconsidered if: (1) new information reveals impacts of this identified action that may affect listed species or critical habitat in a manner not previously considered; (2) this action is subsequently modified in a manner that was not considered in this review; or, (3) a new species is listed or critical habitat determined that may be affected by the identified action.

Thank you for your cooperation with our agency in protecting federally-listed species. If you have any questions or comments, please contact Mr. David Rabon at (919) 856-4520, extension 16, or via email at david_rabon@fws.gov.

Sincerely,

Pete Benjamin
Ecological Services Supervisor

Document title

Real Estate Department Property Environmental Due Diligence

Document number

EVC-REDX-00009

Applies to: Real Estate Department – Carolinas and Florida

Keywords: environmental; real estate – environmental; property management

1.0 PURPOSE

This document outlines the Real Estate Department’s (RE) policies designed specifically to mitigate the environmental risk associated with the acquisition and disposition of land and buildings.

2.0 SCOPE

RE acquires and disposes of land and buildings for Progress Energy (PE). The Land Acquisition/Disposition Unit is responsible for acquiring and disposing of land and buildings and is responsible for achieving environmental compliance and stewardship with all activities it manages. This unit occasionally issues contracts to consultants or engineering firms for detailed property assessments. The RE Land Acquisition/Disposition Specialist will also be the Designated Representative (DR) for each contract and is accountable for proper selection, monitoring, approvals and performance of the contractor to RE and PE environmental standards.

3.0 RISK MANAGEMENT

In addition to utilizing the approval, assessment, and environmental review policies in the RE Environmental Management System ([EVC-REDX-00002](#)), RE mitigates the risk of selecting property that cannot be utilized for its intended use or has excessive contamination liability and mitigates this risk by:

- Utilizing three comprehensive Due Diligence Checklists or forms.
 1. Property Risk Assessment Checklist ([FRM-REDX-00074](#))
 2. Waiver of Third Party Assessment Form, if applicable, and for dispositions only.
- Facilitating client and stakeholder reviews.
- Requiring Department Vice President environmental reviews and approvals for land acquisitions and dispositions.

4.0 DEFINITIONS

4.1 Due Diligence

The phase in the acquisition/disposition process where the buyer/seller is allowed to evaluate the condition of a property to assess the value and potential risks.

4.2 ESS

Environmental Services Section

4.3 Land Acquisition and Land Disposition Due Diligence Teams

A team assembled to conduct an environmental review of a specific proposed land acquisition or disposition. The team will be lead by the RE Land Acquisition/Disposition Specialist. It will be the responsibility of the team lead to schedule meetings and/or reviews and communicate progress to the rest of the team.

The team will also include the RE Environmental Coordinator, Client Environmental Coordinator, and ESS Environmental Specialist.

5.0 ROLES AND RESPONSIBILITIES

5.1 Land Acquisition Due Diligence Team

- Provide independent review and input into the data gathering process.
- Ensure that all environmental laws, regulations, and restrictions associated with the property are known and documented.
- Review and approve conclusions regarding environmental restrictions, any requirements including permit modifications or transfers, suitability for intended use, and appropriateness of environmental risk associated with ownership of the property.
- Ensure that a site visit is conducted by the RE Environmental Coordinator or an ESS Environmental Specialist for all land purchases.
- Contract with an outside consultant or engineering firm for an environmental site assessment that is in accordance with, at the very minimum, the most current ASTM standard for all land purchases (See Appendix A for an overview of site assessments). Additional assessment may be warranted depending on results.
- The Land Acquisition Due Diligence Team shall use the following checklists prior to purchase:
 - Property Risk Assessment Checklist (FRM-REDX-00074)

Land Disposition Due Diligence Team

- Provide independent review and input into the data gathering process.
- Ensure that all environmental laws, regulations, and restrictions associated with the property are known and documented.
- Ensure that a thorough file review and site visit is conducted by the RE Environmental Coordinator or an ESS Environmental Specialist for all land sales. This will be done to determine if it is warranted to contract with an outside consultant or engineering firm for additional assessment activities.
- Review and approve conclusions regarding environmental restrictions, any requirements including permit modifications or transfers and appropriateness of environmental risk associated with transferring ownership of the property.

- The Land Disposition Due Diligence Team shall use the following checklists or forms prior to purchase:
 - Property Risk Assessment Checklist (FRM-REDX-00074)
 - Waiver of Third Party Assessment Form if applicable

5.2 Department Vice President

- Review and approve conclusions regarding environmental restrictions and requirements. All completed due diligence checklists and forms will be provided to the Department Vice President for review.
- Review and approve environmental permit modifications or transfers associated with the property, if applicable.
- Review and approve conclusions regarding environmental restrictions, requirements, suitability for intended use for land purchases, and appropriateness of environmental risk associated with ownership of the property.
- Approve all land purchases and land sales.

5.3 RE Land Acquisition/Disposition Specialist and Designated Representative (DR)

- Ensures that the steps listed in this policy are followed.
- Responsible for assembling the appropriate team, scheduling meetings and/or reviews to communicate progress to the rest of the team, and gaining appropriate approvals before proceeding with property transactions.
- Knowledgeable on scope of work and be familiar with related environmental laws and regulations. May consult RE Environmental Coordinator for assistance.
- The key control point for vendor management and will be held accountable for vendor environmental performance.
- Must be a PE employee and not a contractor.
- Selects vendors per the RE Vendor Management Policy.
- Communicate environmental expectations to the vendor.
- Monitor vendor performance in accordance with standing policies and/or procedures.
- Provide written approvals and certifications as required by policy.
- Proactively assess vendor compliance with policies, procedures, regulations and laws.
- Attend the Contract Administration course (MD-102).
- Use standard PE contract language applicable to environmental compliance and indemnities in vendor contracts.
- Maintain required documentation as defined by the EMS program and related policies and procedures and documentation needed to support contract enforcement.

5.4 Consultants, Contractors, Sub-contractors

- Provide personnel that have been trained in accordance with current industry practices to perform the required work activities.
- Comply with local, state and federal environmental laws and regulations.
- Conduct all work activities in accordance with RE's Environmental Policy Statement.
- Ensure that sub-contractors conduct all work activities in accordance with the RE Environmental Policy Statement.
- Conduct all work activities in a manner that will prevent any negative impact to environment.
- Ensure proper management of all wastes and pollutants.
- Submit incident, near miss, unusual occurrence and other lessons learned information to the DR.
- Maintain required documentation as defined by the EMS program and related policies and procedures.

5.5 RE Environmental Coordinator

- Engaged in the environmental due diligence process.
- Provide environmental compliance and analysis support for the corporate buildings and land.
- Facilitate communication with Client Environmental Coordinators on environmental matters, and ensure appropriate services are provided by RE employees and vendors.
- Responsible for new building environmental compliance after the transition from RE.
- Responsible for achieving environmental compliance and stewardship with all activities

5.6 Client Environmental Coordinator

- Engaged in the environmental due diligence.
- Responsible for new building environmental compliance after the transition from RE.
- Approve all environmental due diligence analysis and ensure that property is suitable for its intended use.

5.7 ESS

- Engaged in the environmental due diligence and permitting modification and/or transfer process.
- ESS conducts review of available records and notes any known environmental compliance or contamination issues with land.

- ESS provides technical assistance with environmental policies, procedures, and laws.

6.0 DUE DILIGENCE AND ENVIRONMENTAL REVIEW PROCESS

- 6.1 Upon receiving approval to proceed with a land purchase or sale the appropriate team will be assembled by the RE Land Acquisition/Disposition Specialist: either the Land Acquisition Due Diligence Team or Land Disposition Due Diligence team.
- 6.2 All purchase contracts will allow for at least a 90 day due diligence period, or as much as reasonably allowed under the contract. In rare instances where less than 90 days is allowed, this process may be expedited. However, under no circumstances should the transaction proceed until the Land Acquisition Due Diligence has agreed that all necessary due diligence has been conducted. All land sales will allow for at least a 90 day due diligence period prior to marketing property for sale.
- 6.3 The following steps must be taken by the **Land Acquisition Due Diligence Team** prior to the purchase of any land:
1. The RE Land Acquisition/Disposition Specialist will identify the proposed land to be purchased and receive approval to move forward by receiving the appropriate signatures.
 2. The RE Land Acquisition/Disposition Specialist will conduct a file review and provide all known information by completing the Property Risk Assessment Checklist (FRM-REDX-00074).
 3. The Land Acquisition Due Diligence Team will review details of property and intended use. At this time, the RE Land Acquisition/Disposition Specialist will provide the RE Environmental Coordinator with all available information and forms completed. The RE Environmental Coordinator will work with the ESS Environmental Specialist to conduct a site visit to identify any concerns or issues including permitting requirements. During this initial review, the Client Environmental Coordinator will provide input on suitability of land for intended use and any known environmental concerns with the proposed purchase.
 4. Once a site visit has been performed, The Land Acquisition Due Diligence Team will review site visit findings. Potential concerns should be identified and a scope of work for the assessment should be documented and sent to an approved vendor by the RE Land Acquisition/Disposition Specialist
 5. The RE Land Acquisition/Disposition Specialist will obtain a proposal from approved environmental vendor. Once obtained, the bid will be reviewed by RE Environmental Coordinator or ESS Environmental Specialist.
 6. RE Land Acquisition/Disposition Specialist, along with the RE Environmental Coordinator, will review the assessment scope of work with vendor prior to their mobilization.
 7. The Land Acquisition Due Diligence Team will review the environmental assessment report findings prepared. At this time, it may be determined that additional assessment or studies are warranted. In this case, additional assessment activities should be contracted with the appropriate vendor, following the above review process.

8. Once all appropriate assessment activities have been completed, the Land Acquisition Due Diligence Team will determine if the purchase should proceed under the existing contract, or suggest any recommended environmental language be included in an amended contract if agreeable by seller and subject to review by the legal department. Environmental approvals are needed from all team members before proceeding with Department VP approval. Additionally, all supporting environmental documents will be provided to the Department VP for review, prior to final approval as outlined in Section 6.6 of this policy.

This process is also illustrated on the flowchart included in this policy.

6.4 The following steps must be taken by the **Land Disposition Due Diligence Team** prior to the sale of any land:

1. The RE Land Acquisition/Disposition Specialist will identify the proposed land to be sold and receive approval to move forward by receiving the appropriate signatures.
2. The RE Land Acquisition/Disposition Specialist will conduct a file review and provide all known information by completing the Property Risk Assessment Checklist (FRM-REDX-00074).
3. The Land Disposition Due Diligence Team will review details of property. At this time, the RE Land Acquisition/Disposition Specialist will provide the RE Environmental Coordinator with all available information and forms completed. The RE Environmental Coordinator will work with the ESS Environmental Specialist to conduct a thorough environmental file review and site visit to identify any concerns or issues including permitting requirements or and transfers. During this initial review, the Client Environmental Coordinator will provide input on any known environmental concerns with the proposed sale.
4. Once a site visit has been performed, The Land Acquisition Due Diligence Team will review site visit findings. Potential concerns should be identified and, if necessary, a scope of work for the additional assessment should be documented and sent to an approved vendor by the RE Land Acquisition/Disposition Specialist. If no recognized environmental concerns are noted with the property, approval will be granted by team to proceed with sale. A Waiver of Third Party Assessment Form will be executed, if applicable.
5. If additional assessment is warranted, the RE Land Acquisition/Disposition Specialist will determine if proceeding with the sale at this time is appropriate. If so, the RE Land Acquisition/Disposition Specialist will obtain a proposal from an approved environmental vendor to conduct additional assessment activities. Once obtained, the bid will be reviewed by RE Environmental Coordinator or ESS Environmental Specialist. The RE Land Acquisition/Disposition Specialist, along with the RE Environmental Coordinator, will review the assessment scope of work with vendor prior to their mobilization.
6. After the additional assessment is conducted, the Land Acquisition Due Diligence Team will review report findings. At this time, it may be determined that even more assessment or studies are warranted and should be contracted with the appropriate vendor, following the above review process.
7. Once all appropriate assessment activities have been completed, the Land Disposition Due Diligence Team will determine if the sale should proceed and suggest any recommended environmental language be included in the contract, subject to review by the legal department. Environmental approvals are needed from all team members before proceeding with Department VP approval. Additionally, all supporting environmental documents will be provided to the Department VP for review, prior to final approval as outlined in Section 6.6 of this policy.

This process is also illustrated on the flowchart included in this policy.

- 6.5 The teams may call for additional information or assessments as needed.
- 6.6 The RE Land Acquisition/Disposition Specialist will assemble a final approval package of documentation for the final team review and for the Department Vice President's final review. This includes the following documentation, as applicable:
- Property Risk Assessment Checklist (FRM-REDX-00074)
 - Waiver of Third Party Assessment Form (if applicable and for land dispositions only)
 - Phase 1 ESA (as per [Appendix A](#))
 - Phase 2 ESA (as per [Appendix A](#))
 - Phase 3 ESA (as per [Appendix A](#))
 - Any other environmental information pertinent to the subject property
 - RE Approval Form
- 6.7 The final approval package will be maintained by the Real Estate Document Center for the life of the corporation.
- 6.8 All information in the final approval package and any new information will be reviewed with appropriate client representatives prior to the transition of environmental responsibilities.

7.0 INTERNAL PROJECT TRANSFER

During transitions of environmental responsibilities between individuals or units within RE, the next level up of management in the original unit will carry the responsibility for a minimum of 30 days to ensure proper transfer and communication.

APPENDIX A

Overview of Environmental Site Assessments

Environmental Site Assessments (ESAs) are conducted to evaluate the potential presence of contamination from current or historical use, or from surrounding properties that could adversely impact the subject property. Additional surveys such as wetland delineations and lead based paint and/or asbestos surveys may also be warranted.

There are four (4) types of environmental assessments:

1.0 Internal ESA (necessary for all property acquisitions and dispositions)

This assessment will be performed by the RE Environmental Coordinator or an ESS Environmental Specialist and will include a site visit documenting site conditions and conducting limited research on the subject property and adjacent properties. A written summary serves as the formal report.

2.0 Phase 1 ESA (necessary for all property acquisitions)

Performed in accordance with the most current ASTM standard, the Phase 1 ESA includes (at a minimum):

- A physical survey of the property and surrounding properties to assess general land use and occupants of the area.
- An on-site visual inspection of the site to identify recognized environmental concerns.
- A review of data regarding the local geology and hydrology.
- An assessment of current and past uses and practices of the property with particular attention given to assessing if any hazardous material or waste practices have occurred at the site.
- An assessment of the historic land use and development of the property through an interpretation of fire insurance maps, city directories, and/or aerial photographs of the site and interviews with persons knowledgeable of the site history.
- A review of owner/operator records.
- A review of local, state, and federal regulatory agency records maintained for the site.
- A written report of all findings including recommendations and conclusions.

3.0 Phase 2 ESA

The Phase 2 ESA will be recommended in the Phase 1 ESA based on the assessment findings, if necessary. This method provides a more comprehensive and detailed review of the subject property to further evaluate suspected environmental impairments and the extent of surface and subsurface contamination. A Phase 2 ESA qualitatively confirms environmental impairments and resulting liabilities, and yields basic projections of remediation costs. This information may be used in negotiating the terms and conditions in a particular property transaction.

4.0 Phase 3 ESA

A Phase 3 ESA will be called for when contamination is identified in a Phase 2 ESA. Documents from the Phase 1 and Phase 2 ESA reports will be reviewed to determine the hydrology and geology of the subsurface soil. The spread of contamination to other areas will be measured and the extent of groundwater contamination will be determined through established sampling methods. If further action is needed, site remediation efforts will be performed in accordance with applicable local, state and federal regulations.

GLOSSARY

1.0 BACKGROUND

■ The legal power to protect historic buildings, structures, sites, and districts rests primarily with local governments. The State Historic Preservation Office (SHPO) helps federal and state agencies and applicants:

- ✓ Identify historic properties listed in, or eligible for, the National Register;
- ✓ Evaluate the impacts of the proposed projects on them; and
- ✓ Avoid or minimize negative impacts.

■ The following guidelines are designed to protect the environment, historical sites, historical landmarks, and artifacts or archaeological sites during land-disturbing activities performed, assisted, permitted, or licensed by a federal agency; as well as applicable state funded, permitted, or assisted projects.

■ These activities include, but are not limited to:

✓ The construction or expansion of:

✎ Buildings

✎ Facilities

✎ Substations

✎ Power plants

✎ Parking lots

✎ Roads

✎ Overhead or underground utility lines (electric, gas, etc.)

✓ Clearing Rights-of-Way

- Archaeological or cultural resources include:
 - ✓ Cemeteries, burial sites, funereal monuments, or other sites with human remains;
 - ✓ Historic buildings, structures, or building remains;
 - ✓ Ancient sites containing cultural artifacts such as:
 - ✎ Pottery,
 - ✎ Tools, weaponry, and other implements,
 - ✎ Ritual artifacts, and
 - ✎ Discarded materials (i.e. Indian mounds with shells and animal bones);
 - ✓ Sites of historical significance to the community, state, or nation, such as battlegrounds, encampments, villages, etc.; and
 - ✓ Traditional cultural properties.
- A cultural resource assessment (CRA) will be required if the project or work activity is expected to impact cultural (e.g. archaeological, historical, or architectural) resources listed, or eligible for listing, on the "Natural Register of Historical Places" (NRHP).
- If a project or work activity inadvertently uncovers a grave, archaeological site, or other historical artifacts, all activities in the site area should be halted.
 - ✓ The group performing the land-disturbing activities should contact the appropriate environmental department; the Environmental Services Section (ESS) assists with energy supply projects and Environmental Health and Safety (EHS) works with delivery and service company projects.
 - ✓ A cultural resource assessment will be performed, and ESS/EHS will consult with the State Historic Preservation Office, as necessary, to determine the appropriate steps to be taken prior to resuming site activities.
- If land-disturbing activities are restricted to areas of the site previously disturbed during construction, a cultural resource assessment is not required.

2.0 PROGRAM REQUIREMENTS

2.1 COMPANY

- Employees and contractors have the responsibility to determine whether land-disturbing activities will impact archaeological and/or cultural resources.
- Employees and contractors should contact their Environmental Coordinator/Specialist, ESS and/or EHS during the planning process of land-disturbing activities which have the potential to impact cultural or archaeological resources.
 - ✓ ESS and/or EHS permitting specialists will consult with the appropriate State Historic Preservation Office (SHPO), as necessary, to determine appropriate actions to take.
 - ✓ Any land-disturbing activities that impact cultural resources require a cultural resource assessment.
- Land-disturbing activities in areas of known cultural or archaeological resources should be avoided if possible and minimized at all times.
- Employees and contractors should contact ESS or EHS if archaeological or cultural resources are inadvertently encountered during land-disturbing activities.
 - ✓ All work should be halted while ESS and/or EHS permitting specialists consult with the appropriate State Historic Preservation Office to determine appropriate actions to take.

2.2 FEDERAL

- Section 106 of the National Historic Preservation Act of 1966 requires that historic properties are considered when federal agencies are involved in any aspect of permitting an activity. Federal agencies will consult with the SHPO and/or Tribal Preservation Office and give the Advisory Council on Historic Preservation and the public an opportunity to comment before projects are implemented.

2.3 FLORIDA

- The Florida Historical Resources Act (Chapter 267, Florida Statutes (F.S.)) requires that the Florida Division of Historical Resources provide environmental review of State and federal actions affecting historic and archaeological properties in Florida.
- Other State legislation addressing the preservation of the state’s historical resources includes:
 - ✓ The Emergency Archaeological Properties Acquisition Act of 1988 (Chapter 253.027, F.S.);
 - ✓ Offenses Concerning Dead Bodies and Graves (Chapter 872, F.S.).

2.4 GEORGIA

- The Official Code of Georgia Annotated (OCGA) 12-3-620 to 622 requires that the Georgia Historic Preservation Division provide environmental review of State and federal actions affecting historic and archaeological properties in Georgia.
- Other pertinent State legislation includes:
 - ✓ Submerged Cultural Resources, OCGA 12-3-80 to 83;
 - ✓ Abandoned Cemeteries and Burial Grounds, OCGA 36-72-1 to 16; and
 - ✓ Notification of Law Enforcement Agency Upon Disturbance, Destruction, or Debasement of Human Remains, OCGA 31-21-6.

2.5 NORTH CAROLINA

- The Archaeological Resources Protection Act, Chapter 70, Articles 1-3, General Statutes (G.S.) requires that the SHPO, working in conjunction with local historic preservation commissions, provides environmental review of State and federal actions affecting historic and archaeological properties in North Carolina.
- Other pertinent legislation includes:
 - ✓ Cemetery protection, G.S. 14, G.S. 65; and
 - ✓ Protection and Enhancement of the Historical and Cultural Heritage of North Carolina, Executive Order XVI.

2.6 SOUTH CAROLINA

- Sections of The South Carolina Code of Laws require that the SHPO provides environmental review of State and federal actions affecting historic and archaeological properties in South Carolina.
- Pertinent legislation includes:
 - ✓ Title 16, Chapter 17 and Title 27, Chapter 43, pertaining to abandoned cemeteries and burials;
 - ✓ Title 54, Chapter 7 Article 5-610 et seq., the South Carolina Underwater Antiquities Act of 1991;
 - ✓ Title 48, Chapter 39, The Coastal Zone Management Act of 1976; and
 - ✓ The South Carolina Department of Health and Environmental Control's regulations regarding Hazardous Waste Management Facilities, SC Code of Regulations 61-104.

3.2 FEDERAL

- The National Register of Historic Places is the Nation's official list of cultural resources worthy of preservation. Properties listed in the Register include districts, sites, buildings, structures, and objects that are significant in American history, architecture, archaeology, engineering, and culture. The National Register is administered by the National Park Service, which is part of the U.S. Department of the Interior.
- National Register properties are distinguished by having been documented and evaluated according to uniform standards.

3.3 FLORIDA

- Work in culturally important areas requires review by the state historical preservation office. A cultural resources assessment may be required.
- Typically authorization to proceed is granted in the form of a letter from the SHPO.
 - ✓ If important sites are present, any restrictions or guidelines on how to proceed would be outlined in the letter.
- Individuals that survey, dig, remove, and/or catalog artifacts are typically required to be licensed, and their activities are regulated.

3.4 GEORGIA

- Work in culturally important areas requires review by the state historical preservation office. A cultural resources assessment may be required.
- Typically authorization to proceed is granted in the form of a letter from the SHPO.
 - ✓ If important sites are present, any restrictions or guidelines on how to proceed would be outlined in the letter.
- Individuals that survey, dig, remove, and/or catalog artifacts are typically required to be licensed, and their activities are regulated.

3.5 NORTH CAROLINA

- Work in culturally important areas requires review by the state historical preservation office. A cultural resources assessment may be required.
- Typically authorization to proceed is granted in the form of a letter from the SHPO.
 - ✓ If important sites are present, any restrictions or guidelines on how to proceed would be outlined in the letter.
- Individuals that survey, dig, remove, and/or catalog artifacts are typically required to be licensed, and their activities are regulated.

3.6 SOUTH CAROLINA

- Work in culturally important areas requires review by the state historical preservation office. A cultural resources assessment may be required.
- Typically authorization to proceed is granted in the form of a letter from the SHPO.
 - ✓ If important sites are present, any restrictions or guidelines on how to proceed would be outlined in the letter.
- Individuals that survey, dig, remove, and/or catalog artifacts are typically required to follow the South Carolina Standards and Guidelines for Archaeological Investigations, with additional requirements for investigations that fall under the Underwater Antiquities Act.

Re: Archaeological Survey, Shearon Harris Makeup
Water System, Wake and Chatham Counties

Dear Mr. Hogarth:

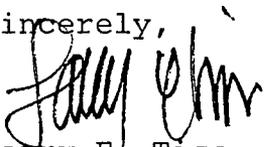

We have received the survey report concerning the above
project.

As you are aware Mr. Trawick Ward of the University of North
Carolina at Chapel Hill has conducted a survey of the
proposed project area. During the course of the survey one
prehistoric lithic scatter was located within the project
area. Due to the disturbed nature of the site and the sparse
evidence of prehistoric activity, Mr. Ward has recommended
that no further archaeological investigation be conducted in
connection with this project. We concur with this recommenda-
tion and find that this project will have no effect upon
significant archaeological resources.

The above comments are made pursuant to Section 106 of the
National Historic Preservation Act of 1966, the Advisory
Council on Historic Preservation's Regulations for Compliance
with Section 106, codified at 36 CFR Part 800, and to
Executive Order 11593, "Protection and Enhancement of the
Cultural Environment."

Thank you for your cooperation and consideration. If you
have questions concerning the above comments, please contact
Ms. F. Langdon Edmunds, Environmental Review Coordinator, at
919/733-4763.

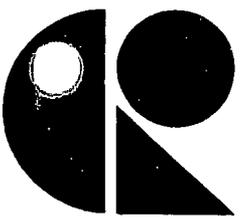

Sincerely,

Larry E. Tise
State Historic Preservation Officer

Re: Shearon Harris Nuclear Plant
Wake and Chatham Counties; Inquiry

Dear Mr. Sanders:

We have reviewed the survey report concerning the Shearon Harris Nuclear Power Plant Cooling Lake Reservoir in Wake and Chatham counties, and have the following comments:

As you are aware, an archeological reconnaissance survey was conducted by Mr. Trawick Ward under the direction of Dr. Joffre L. Coe of the University of North Carolina at Chapel Hill. During the course of the survey, one historic period site and thirty-six prehistoric period sites were located. None of the sites located, however, are considered to be significant in terms of the criteria for inclusion in the National Register of Historic Places, due to damage and destruction caused by erosional processes. Mr. Ward has recommended that no further archeological investigations be conducted for this portion of the proposed power plant. We concur with his recommendations and find that the Cooling Lake Reservoir will have no adverse effect upon significant archeological resources.

Thank you for your cooperation and consideration. If you have questions concerning these comments, please contact Ms. F. Langdon Edmunds, Environmental Review Coordinator, at 919/733-4763.

Sincerely,

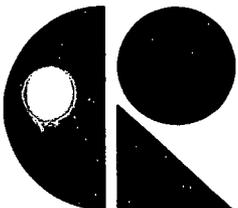

Larry E. Tise
State Historic Preservation Officer

Archaeological Survey and Evaluation of the
Shearon Harris Nuclear Power
Plant Cooling Lake
Reservoir

Trawick Ward
Archaeologist

Prepared By
Research Laboratories of Anthropology
The University of North Carolina at Chapel Hill

January 1978

ABSTRACT

An archaeological survey was made of the Shearon Harris cooling lake reservoir site in Chatham and Wake counties. One historic and several prehistoric sites were located within or adjacent to the impoundment area. The vast majority of these were occupied during the Archaic Period, although some evidence of later occupations was also encountered. The sites were small, badly disturbed, and lacked the potential for adding significantly to our knowledge of North Carolina history.

INTRODUCTION

At the request of the Carolina Power and Light Company, the Research Laboratories of Anthropology at the University of North Carolina, Chapel Hill, conducted an archaeological survey of the proposed Shearon Harris Nuclear Power Plant cooling lake reservoir. The project site is located in eastern Chatham and southwestern Wake counties near the community of Merry Oaks. The main dam is being constructed on Buckhorn Creek less than a mile south of its confluence with White Oak Creek. In addition to these streams, the impoundment will flood land along several tributaries including Tom Jack Creek, Little White Oak Creek, and Thomas Creek. With a surface pool elevation of 220', the lake will inundate some 4,000 acres.

A small arm of the reservoir, just north of the confluence of White Oak and Buckhorn creeks, has been cleared of primary growth, and a few small cultivated fields are scattered about. Otherwise, the area is almost entirely undeveloped with at least 95 percent standing in forest. Where clearing has been completed, a tangle of brush, briars, and grass covers the surface. At the time of the survey (late fall), the few fields lay fallow, thinly covered with the stubble of the summer's harvest. However, stands of mixed hardwoods, interspersed with an occasional pine thicket, dominate the environmental scene.

Moderate to steep bluffs flank both sides of the major streams, being more pronounced along their lower reaches. A well-defined ridge separates Buckhorn and White Oak creeks and enhances the slope of the

bluffs paralleling the east bank of White Oak Creek. The flood plains are generally low and poorly drained, particularly in the area where the two creeks come together.

The proposed reservoir area presents a view typical of the Piedmont environment as encountered along most of the secondary streams. Although direct evidence is lacking, in all probability, it does not differ radically today from the environment exploited by peoples during most of the prehistoric period. A rich variety of wild plant and animal resources could have been exploited, whereas agricultural pursuits would not have proven overly productive. This latter weakness in the environment is evident today by the virtual absence of cultivated land.

METHODOLOGY

The proposed reservoir area can be divided into three distinct environmental strata: 1) the relatively steep bluffs along Buckhorn Creek and the eastern bank of White Oak Creek (Plate I); 2) the more rounded, undulating slopes along the smaller tributaries and the western bank of White Oak Creek (Plate II); and 3) the low, almost swampy, bottoms comprising the flood plains (Plate III). Although these strata were almost completely enshrouded by vegetation, a complex web of logging roads and farm trails allowed access and provided transects with good surface visibility. Also, extensive sheet erosion along the bluffs had sufficiently bared large areas to permit a surface appraisal.

After determining that there were no known historic or prehistoric sites in the impoundment, all roads, trails, erosional features, and any other areas with the slightest amount of surface visibility were investigated on foot. This strategy provided a look at a cross section of the various environmental zones and aided in determining the most likely locations to suspect sites. Based on these results, as well as prior experience in similar environmental settings, it was found that most of the sites were restricted to the relatively flat terraces rimming the more pronounced bluffs (Plate IV). In these areas, if ground cover prevented an adequate surface inspection, large patches were raked clear in an attempt to reveal any concealed artifact clusters.

Thirty-six prehistoric and one historic site were discovered during the course of the survey. Evidence for these sites ranged from a few flakes with indeterminate spacial and temporal parameters to moderate concentrations of artifacts, including diagnostic tools, clustered within fairly tight, well defined areas.

THE SITES

Ch^V333. This site was located on a slight rise west of Buckhorn Creek and north of SR 1915. Because of the removal of primary growth, the site area was covered by a moderately dense tangle of briars and brush. Artifacts were sporadically recovered from an area approximately 75' by 30'. Included in the inventory were one plain and one fabric-impressed, sand tempered sherd, a bifacially worked chopping tool, fifteen slate flakes, and six quartz chips. The sherds probably date to the Early Woodland Period (ca. A.D. 100) although their small size and deteriorated condition prevented a positive identification. The lithic collection did not contain any specimens with age-diagnostic attributes.

Ch^V334. Across the creek from Ch^V333, on the east side of SR 1915, another small site was located. The ground surface was obscured by briars and tall grass, but twelve slate and five quartz flakes were gleaned from an area approximately thirty feet in diameter. None of the flakes evidenced secondary modification.

Ch^V335. This was one of several sites found around the terrace of a bluff flanking White Oak Creek, north of its confluence with Buckhorn Creek. Four sites, Ch^V335, Ch^V336, Ch^V337, and Ch^V338, probably represent the same occupation, but since the specimens were found in isolated spots, separate numbers were assigned in order to maintain their spacial integrity. In this area, all the trees had been cut and removed, but surface visibility was generally poor because of secondary vegetation. However, patches bared by erosion were frequently encountered. In one of these a quartz scraper and one flake were found and designated Ch^V335.

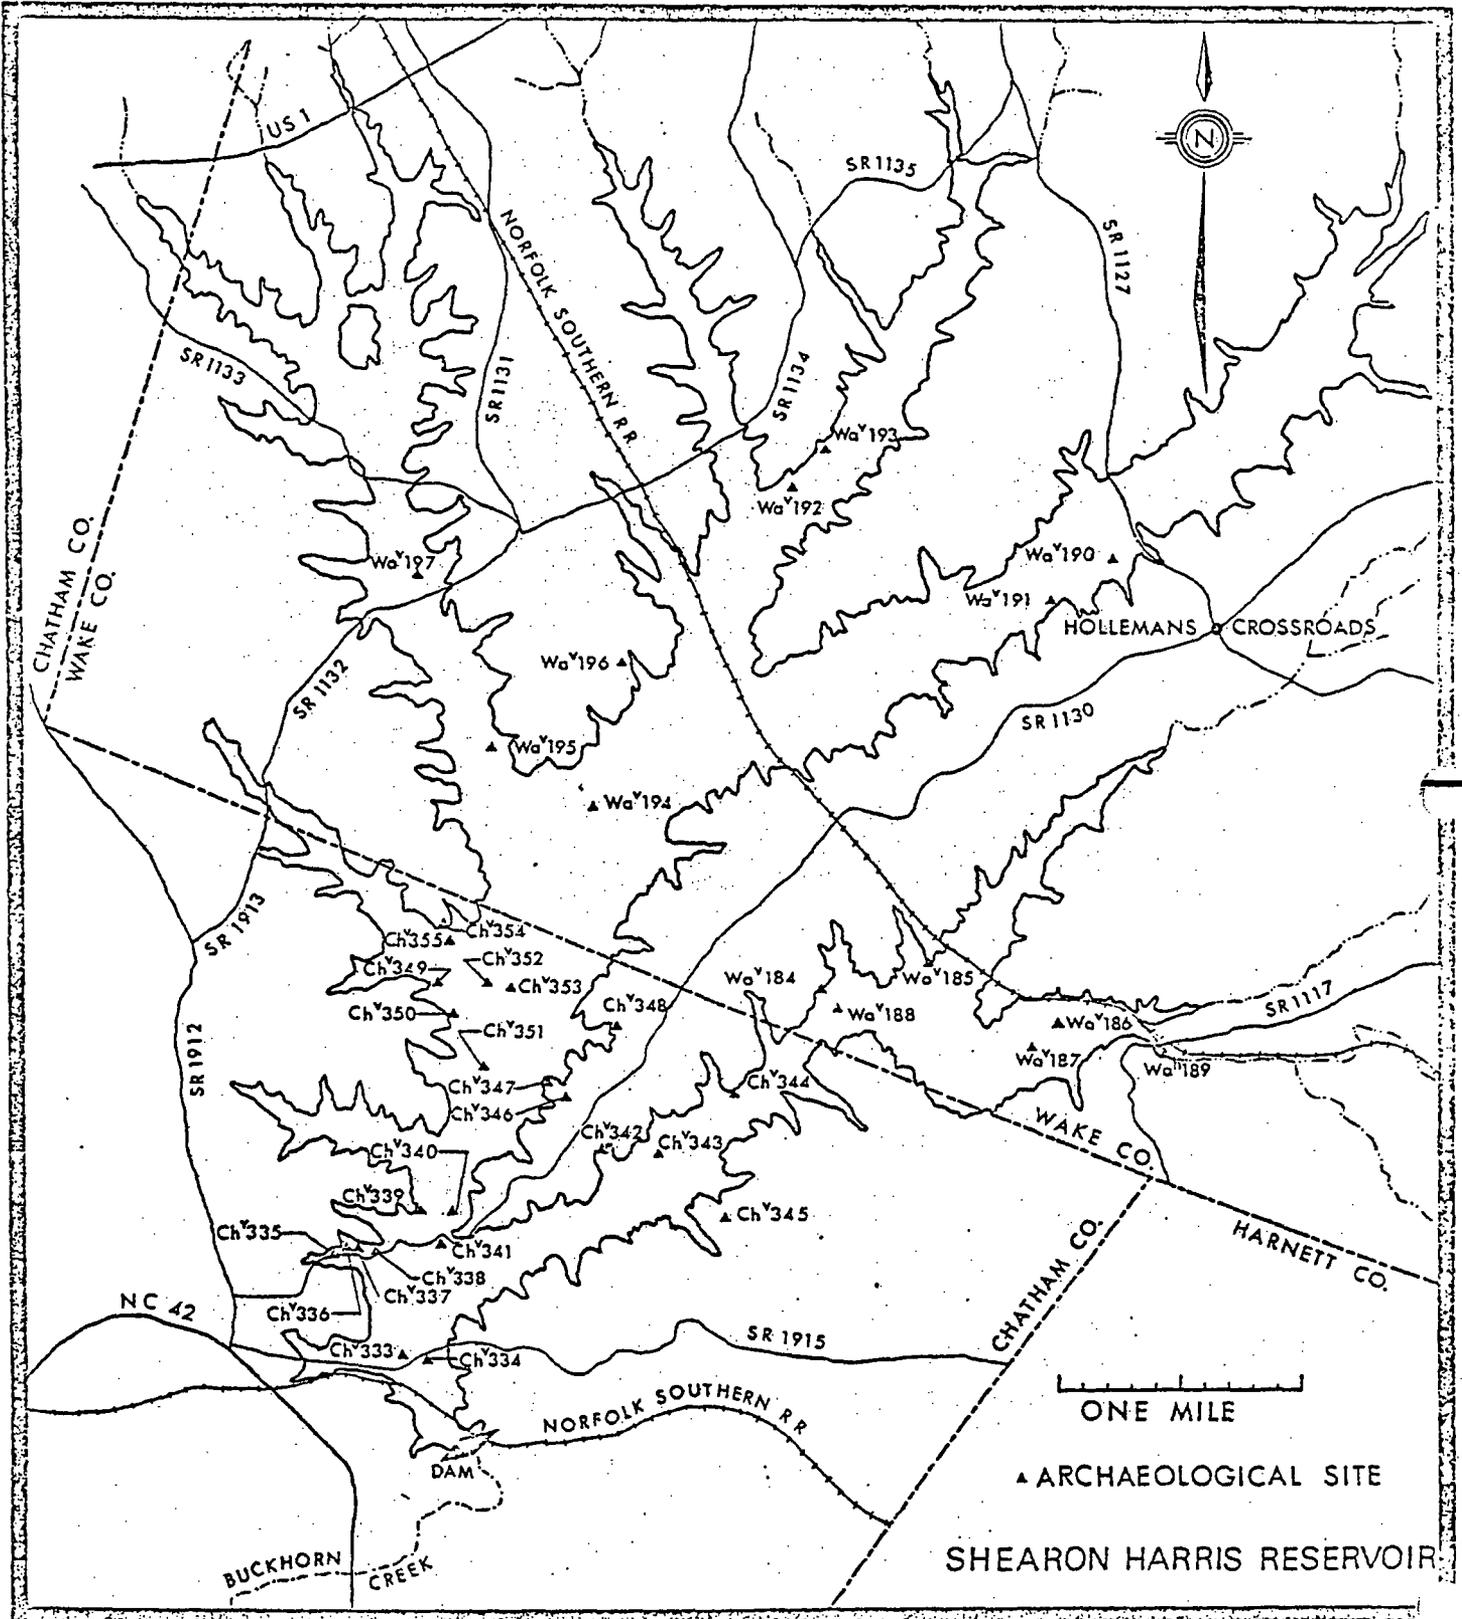

Figure 1
Sites Located in the Survey Area

Ch^V336. Three slate flakes and a retouched quartz flake were found in another small cleared area 150' northeast of Ch^V335.

Ch^V337. An additional five flakes were collected from an eroded patch 200' east of Ch^V336. Although there were several bared spots in the vicinity of Ch^V337, none contained any evidence of cultural activity.

Ch^V338. A fairly large, moderately clear, area approximately 100' by 30' was located 200' east of Ch^V337. From here, a quartz Guilford projectile point fragment, one quartz biface, a quartz scraper, one quartz chip and three unmodified slate flakes were retrieved. The projectile point suggests a Middle Archaic (3500 B.C.) date for this site, and given its proximity to Ch^V335, Ch^V336, and Ch^V337, it is not unreasonable to suspect that they, too, resulted from aboriginal activity during this same general time period.

Ch^V339. This site was located on a terrace on the east flank of a steep bluff overlooking White Oak Creek some .25 miles northeast of Ch^V338. The area here was also covered by secondary growth, but in several places the surface had been scoured by erosion. A Guilford projectile point, an unidentifiable projectile point fragment, one quartz and four slate flakes were collected over an area with a circumference of approximately 350'. Again a Middle Archaic occupation is suggested by the Guilford projectile point.

Ch^V340. This site was found on a rise in the flood plain adjacent to White Oak Creek and approximately 650' east of Ch^V339. A relatively thin secondary growth of weeds and briars resulted in only moderate surface concealment. One slate biface and fifteen flakes along with three

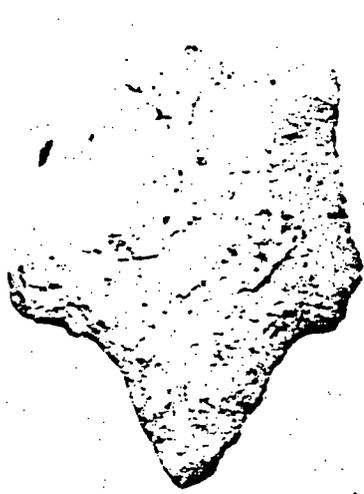

quartz flakes and one small sherd were found within an area approximately 200' by 200'. The sherd was sand tempered, but surface treatment could not be determined because of its poor state of preservation.

Ch^V341. This site was located in an old field south of SR 1914 between White Oak and Buckhorn creeks. One quartz biface, five quartz flakes, and two slate chips were collected from the entire field which was a little less than an acre in extent.

Ch^V342. Seven slate and four quartz flakes were found along a logging road off SR 1914, north of Buckhorn Creek. The site was located at the edge of the proposed reservoir on the southern slope of a bluff paralleling the creek. A stand of pine and mixed hardwoods lined the road and created unfavorable collecting conditions. The few specimens that were visible were scattered along the ruts of the road over a distance of about 75'.

Ch^V343. This site was discovered in a clearing south of a sawdust pile between SR 1914 and Buckhorn Creek. The artifacts were recovered from an area roughly 100' by 75' along a terrace overlooking the creek. Two Guilford projectile point fragments (Plate V), one side scraper, a re-touched flake, a blade with lateral retouch, all manufactured from slaty material, and ten quartz flakes completed the collection. The Guilford points date the occupation at the site to the Middle Archaic (3500 B.C.) Period.

Ch^V344. Another site was discovered in a similar setting northeast of Ch^V343. Artifacts were found scattered over a cleared area approximately 100' in diameter immediately east of an old sawdust mound. This site, however, produced only eight slate and five unmodified quartz flakes.

Plate V
Artifacts Collected during the Survey

Ch^V345. Four slate and one quartz chips were found in the ruts of a logging road just outside the reservoir limits. The road intersects SR 1915 from the north approximately one quarter of a mile west of the Harnett County line.

Ch^V346. This site was also outside the perimeter of the direct impact zone. One unidentifiable projectile point blade fragment, a crude biface, and two unused flakes, all manufactured from slate-like material, were recovered from a clearing adjacent to a logging road that intersects SR 1914 .6 mile southwest of the Wake County line.

Ch^V347. A re-touched quartz flake, three unmodified quartz chips, and a slate flake were collected from a small clearing 400' northwest of Ch^V346. The material was thinly distributed over an area 75' by 50'. As was the case with Ch^V346, this site was also outside the reservoir pool limits.

Ch^V348. This site was found at the end of a logging road that intersects SR 1914 .15 mile southwest of the Wake County line. Specimens were widely scattered along the slope of a ravine for a distance of roughly 200'. Because of heavy ground cover, artifacts were found only in the ruts of the logging trail and in a small clearing at the end of trail. Included in the inventory were a Randolph projectile point (Plate V), sixteen quartz and three slate flakes. The Randolph point is an index of the Historic Period (Ca. A.D. 1700).

Ch^V349. A small amount of lithic material was found along a terrace west of an unnamed branch of White Oak Creek. Two quartz flakes and four slate chips were restricted to an area roughly 90' in circumference. The site was north of a logging road that intersects

SR 1912 from the west and 600' south of the SR 1912 and SR 1913 intersection. Although the site area had grown up in brush and briars, surface visibility was moderately good because of heavy sheet erosion.

Ch^V350. This site was located approximately 300' south of Ch^V349 at about the same elevation. A fairly steep ravine separated the two. This was a large site with dimensions measuring some 300' by 100'. Since the ground surface was covered by brush and grass, visibility depended upon the degree of erosion and the thickness of the vegetative growth. In some sections of the site, moderately large expanses were clear, while in others the surface was almost totally ensconced. The collection included a quartz Halifax projectile point (Plate V), four re-touched slate flakes, 33 waste flakes of slaty material, and 34 unmodified quartz flakes. A Middle Archaic date (3000 B.C.) is suggested for the occupation by the presence of the Halifax projectile point.

Ch^V351. West of the confluence of White Oak Creek and an unnamed branch, on the toe of a low terrace, a highly dispersed scatter of material was located. Visibility varied considerably over the 300' by 300' site area, and the grass and brush cover was somewhat thicker than that characteristic of the higher slopes. As a consequence, most of the specimens were found along the eroded sides of the terrace. These included a Savannah River projectile point (Plate V), a small end scraper, one crude biface, and thirteen waste flakes, all made from slaty materials. In addition, six quartz chips were also collected. Based on the presence of the Savannah River point, the site dates to the Late Archaic Period (2000 B.C.).

Ch^V352. In the southeastern corner of a field on the edge of a bluff directly across an unnamed branch from Ch^V349, a relatively large number of artifacts were isolated within an area approximately 200' by 100'. In the field, surface visibility was excellent, but the eastern limits of the site could not be determined accurately because of heavy second growth vegetation. Two Savannah River points, one hammerstone, 25 slate and thirteen quartz flakes were found. Again, a Late Archaic (2000 B.C.) occupation is indicated because of the Savannah River specimens.

Ch^V353. Additional specimens were found at the very eastern edge of the bluff some 650' east of Ch^V352. Although the material was concentrated in an area approximately 100' by 50', it is likely that this site represents the eastern extremity of Ch^V352. The heavy ground cover that obscured the area between the two sites was probably responsible for an arbitrary division. However, severe erosion in the vicinity of Ch^V353 provided moderate surface visibility and permitted the discovery of one unifacial scraper, 42 slate and 16 quartz flakes. Although no diagnostic tools were found, the debitage was reminiscent of the Late Archaic and very similar to that from Ch^V352.

Ch^V354. Two specimens were found on the crest of a bluff in a field west of Ch^V352. A Randolph projectile point (A.D. 1700) and one slate flake were all that were recovered although surface visibility was excellent. This site was located just outside the proposed reservoir pool.

Ch^V355. This site was located south of Ch^V354, within the reservoir. Again surface visibility was good, but only five slate and four quartz chips were recovered from an area approximately 50' by 30'.

Wa^v184. One slate scraper and five random slate flakes were recovered from the side of a bluff at the end of a logging road that intersects SR 1130 a half mile northeast of the Wake County line. The specimens were found in the ruts of the road, and because of the dense growth of mixed hardwoods surrounding the road, site dimensions were indeterminant.

Wa^v185. This site was located just inside the reservoir pool in a cleared area adjacent to a field road that intersects SR 1130 a quarter mile northeast of the Norfolk Southern Railroad crossing. Surface visibility was fair although the site area, approximately 10,000 square feet, was overgrown with weeds and grass. The artifact inventory included two Guilford projectile points, a preform, a large biface, and 28 unmodified flakes, all manufactured from slaty materials. In addition, a small end scraper and six flakes were produced from quartz. The projectile points date the site to the Middle Archaic Period (3400 B.C.).

Wa^v186. This site was located at the east end of a large field in the flood plain of Buckhorn Creek. The ground surface was clear, providing optimum collecting conditions. However, only eight slate and three quartz flakes were gleaned from an area roughly fifty feet in diameter.

Wa^v187. This site was located west of Wa^v186 in the same field, and it was very similar in terms of size and content. Only one slate flake, a quartz biface fragment, and three quartz chips were recovered. These specimens were sparsely dispersed over an area approximately 40' in diameter.

Wa^V188. A small site was found on a prominent rise in the flood plain across Buckhorn Creek from Wa^V184. Although the topography defined an ideal location for a substantial Archaic occupation, only a biface, three quartz and four slate flakes were recovered. Surface visibility was excellent, and site dimensions measured 50' by 35'.

Wa^h189. A historic site designation was given to the remains of a dam and grist mill complex situated on Buckhorn Creek just off SR 1116. In addition to the dam and mill foundation remains, a race running between the two was also present. The dam was still intact except for a section at the southwestern end that had been perforated to permit the channel to flow freely (Plate VI). The mill house was evidenced by concrete steps, foundation piers, fragments of the mill stone, and a section of concrete facade (Plate VII). The complex appears to date to the early part of this century and was in use until fairly recently. It is located just on the edge of the proposed reservoir pool.

Wa^V190. An Early Woodland (500 B.C.) projectile point was found in the west central section of a fairly large field off the west side of SR 1127, just south of White Oak Creek (Plate V). Although the ground surface exhibited excellent visibility, no other specimens could be found.

Wa^V191. Another site represented by one specimen, a bifacially worked quartz scraper, was located on a natural levee adjacent to the south bank of White Oak Creek in the vicinity of Hollemans Crossroads. Again the surface was clear, but additional specimens were not forthcoming.

Wa^V192. Only two artifacts were found at this site located in the southwestern corner of a field between Thomas Creek and Little White Oak Creek. Surface visibility was excellent, but a quartz end scraper and an unmodified slate flake were the only two artifacts recovered after a careful search.

Wa^V193. This site was located northeast of Wa^V192 in the same field. It, too, produced only two artifacts, another quartz end scraper and a fragment of a bifacially worked quartz tool. But here the only place that it was possible to search for artifacts was in a farm road. The surrounding ground was matted with pasture grass or entangled in briars and brush.

Wa^V194. A few pieces of debitage were collected from the ruts of a logging road approximately 1000' northeast of White Oak Creek. The logging road branches off SR 1134 to the south immediately east of the SR 1132 and SR 1134 intersection. The collection included one quartz and five slate flakes.

Wa^V195. This site was located on the first terrace on the east side of Tom Jack Creek in the corridor of a natural gas pipeline. The terrace flank was severely eroded providing moderate surface visibility. The collection consisted of twelve unmodified slate flakes and one quartz chip scattered over an area thirty feet in diameter.

Wa^V196. This site was located in the north central section of a field that straddles an unnamed branch of White Oak Creek. The field is at the end of a farm road that forks off the logging road leading to Wa^V194. A Savannah River projectile point and one flake were all that were present. It was suspected that these eroded from higher elevations

Plate VI
Dam at Wa^h189

Plate VII
Remains of the Mill at Wa^h189

to the west, but a careful check failed to verify this suspicion. The Savannah River point dates to the Late Archaic Period (2000 B.C.).

Wa^V197. In an old field north of SR 1132 and just east of Tom Jack Creek, several artifacts were found widely scattered over an area roughly an acre in extent. The field was overgrown with weeds and a carpet of grass, making conditions less than ideal for surface hunting. Nevertheless, by carefully investigating eroded spots and patches with sparse growth, a Savannah River point, a Guilford preform, and three flakes, all manufactured from slaty material, were retrieved along with two flakes and a Guilford point made of quartz. The co-occurrence of Guilford and Savannah River types suggests a multi-component occupation during the Middle and Late Archaic periods (ca. 3500 - 1500 B.C.).

DISCUSSION

The data collected from the survey conforms generally with the known pattern of occupation and settlement in the North Carolina Piedmont. Most of the sites with temporally diagnostic specimens were occupied during the Archaic Period. Although the majority failed to yield distinctive types, the absence of ceramics, the stone working technology evidenced by the debitage, and the size and overall configuration of these sites also points to an Archaic affiliation.

All of the sites, Woodland as well as Archaic, were apparently occupied for relatively brief intervals. With the exception of the few sites represented by a single specimen, all were probably temporary encampments with some of the larger sites perhaps being inhabited sporadically over an extended time span. This was certainly true for Wa^V197. The isolated artifacts at Wa^V190 and Wa^V196, as well as some of the other sites defined by extremely small numbers of specimens, were results of idiosyncratic or fortuitous behavioral expressions whose explanation can only be imagined.

Although there were considerable differences in site size and some variation in topographic orientation, it is felt that, in many instances, these distinctions are misleading and encourage a false impression of past reality. Differences in erosion, variations in ground cover, plowing history, and a myriad complex of other agents and forces have impacted and interacted with the cultural materials since their deposition. The result of all this has been the creation of considerable non-cultural biases in the extant record. For this reason, only the most general

interpretations can be posited with a reasonable assurance of validity. One thing that does appear certain, however, is that the area was most extensively occupied and utilized by Middle and Late Archaic peoples. From previous experience, we know these migratory bands of hunters and gathers exploited the full range of natural resources available and, in doing so, left a reticular trail throughout North Carolina and the Southeast generally.

RECOMMENDATIONS

The prehistoric sites are represented by thin surface deposits that have been badly disturbed by plowing and erosion. These forces have obliterated whatever contextual relationships that might have been present leaving only a homogeneous mix of specimens. Such data are meaningful only within very general parameters which have been adequately defined by means of the surface survey. The one historic site, the mill complex, is a twentieth century construction that has also been virtually destroyed. The few physical traces that do remain appear to have little historical significance. As a consequence of the absence of sites lacking minimal criteria for nomination to the National Registry, clearance for the project is recommended.

MEMO TO: Dr. Joffre L. Coe

FROM: Trawick Ward

SUBJECT: Archaeological Survey and Evaluation of the Carolina Power and Light Shearon Harris Nuclear Power Plant Main Dam Site, Intake Pump Station and Makeup Water System.

DATE: June 18, 1977

1. The Projects. The main dam is to be constructed on Buckhorn Creek in Chatham County south of the SR 1915 bridge and immediately north of the Norfolk Southern Railroad crossing. It will be approximately 1500' long, stretching between two steep bluffs on either side of the creek, and average roughly 350' wide. The intake pump station will be located on the north bank of the Cape Fear River, immediately northwest of the existing Buckhorn Dam. It will measure approximately 137' long and 35' wide. The makeup water system will consist of approximately 4.6 miles of buried pipe and open channel. There will be some two miles of pipe, eight feet in diameter, running from the intake structure to the site of the Norfolk Southern Railroad relocation. From this point, an open channel, a little less than three miles in length, will be cut to the Tom Jack Creek area where the system will terminate by emptying into the proposed Shearon Harris Reservoir. The impact zone of the makeup water system varies in width depending upon whether the pipe is laid or the channel is cut. Variation in topography will also affect the width. After discussing this matter with engineers at the plant site, it was determined that a survey area 100' wide along the pipe line would more than cover the potential construction impact while a corridor 150' wide would be sufficient for the channel route.

2. The Survey. Because of the steep V-shaped creek valley at the main dam site, the most likely location for significant prehistoric or historic sites was the crests of the bluffs flanking the creek. The bluff top on the spillway side had been cleared, making surface visibility excellent. This area was carefully walked over, and although a considerable amount of vein quartz was present, none showed any evidence of having been modified or used by prehistoric people. A logging road ran parallel to the long axis of the dam, down the steep bluff slope to the creek bed. Here, too, surface visibility was good, but no prehistoric or historic remains were in evidence. The bluff top on the opposite side of the creek was partially cleared and could also be adequately assessed by surface inspection. The slope down the side of the bluff to the creek channel was forested; however, there were several gulleys and cleared patches bared by erosion. All areas were carefully checked with negative results. The topography at the main dam site is such that even if prehistoric or historic archaeological remains had been encountered, it is extremely doubtful that any meaningful contextual relationships could have been preserved.

Initially the makeup water system route was walked over to appraise its archaeological potential. The entire corridor was forested, and the topography was marked by moderate to steep hills and valleys. Except at the intake pump station site on the Cape Fear River and the terminus at Tom Jack Creek, there were no nearby water sources. Because of the topography, the general lack of available water sources, and the dense ground cover, it was decided to concentrate the survey efforts in locations that offered the highest potential for producing archaeological sites. These areas included

the crests of the hills, the expanse around the intake pump station, and the terminus site at Tom Jack Creek. To supplement this coverage, all road crossings were also investigated. All these areas were intensively surveyed, and where necessary the surface was raked clear to provide adequate visibility. Only one small site, Ch^V332, was discovered which was located on a bluff north-northeast of the existing Buckhorn dam. The site produced a light scatter of severely disturbed nondiagnostic debitage probably dating to the Late Archaic Period (2000 B.C.).

Approximately one acre around the intake pump station was investigated. Here the ground was low and swampy and partially covered by heavy grass and weeds. However, a logging road and a relatively large area that had been cleared for a boat dock were clear. A surface inspection of the entire site failed to produce any evidence of archaeological remains.

3. Recommendations. Because of the total absence of historic sites and the small, disturbed nature of Ch^V332, no significant cultural resources will be adversely affected by the construction of the main dam on Buckhorn Creek, the intake pump station, or the makeup water system. Consequently, approval for all projects is recommended.

reference ... (page -)

MEMO TO: Dr. Joffre L. Coe

FROM: Trawick Ward

SUBJECT: Re-Survey of a Segment of the Shearon Harris Nuclear Power
Plant Makeup Water System

DATE: December 4, 1979

1. The Project. The makeup water system was originally surveyed in June, 1977. At this time the entire corridor had not been staked out, and all the impact zone was ensconced by heavy woods. Recently a segment of the corridor extending from the Cape Fear River to N.C. 42 was cleared. Because of the adverse conditions encountered during the initial survey, it was felt that a re-survey of this area, particularly the bluffs along the Cape Fear River and Buckhorn Creek, would be beneficial.
2. The Survey. The cleared segment was walked by a two-man team, and the surface was inspected for evidence of aboriginal or historic activity. Although rye grass had been sowed, surface visibility was good because of erosion and the recent frosts. Conditions were significantly better than those encountered during the first survey.
3. Survey Results. Surprisingly only one small lithic scatter consisting of 4 random rhyolite flakes was found. A careful inspection of the high bluffs between Buckhorn Creek and the Cape Fear River failed to turn up any traces of prehistoric activity. The one site that was found was located on the flank of a fairly wide bluff west of and adjacent to S.R. 1921, overlooking the Buckhorn Creek bottoms. This sparse evidence of prehistoric activity was predicted from the results of the original survey, however, it

was believed that the improved ground surface conditions would lead to the discovery of more than one small lithic scatter.

The reason for the lack of sites may be attributed to the fact that vein quartz outcrops were everywhere exposed creating a rocky, uneven surface. It has been noted in other areas that there is usually a negative correlation between such outcrops and the location of prehistoric sites. Either the quartz indicates severe erosion, and most of the cultural materials have been scoured out and re-deposited elsewhere or such areas were simply not attractive to aboriginal populations--for whatever reasons.

3. Recommendations. Because of the failure to uncover additional significant sites, the original recommendations are reinforced and further investigations are not warranted.

REPORT OF INVESTIGATION OF SUSPECTED
REVOLUTIONARY WAR ENTRENCHMENT

Holly Springs, North Carolina

By L. E. Babits
Archaeology Section

On 29 April 1974, an archaeologist from the Archaeology Section, Department of Cultural Resources investigated reputed revolutionary war earthworks near Holly Springs, North Carolina.

Accompanied by Calvin Ragan and Mrs. Irma Ragan Holland, the archaeologist crossed Norris Creek on foot about 2½ miles northeast of the junction of Federal Road and Avent Ferry Road.

The site is mostly overgrown with young timber. There are also several large oaks which appear to be approximately 100 years old. There is widespread poison ivy and poison oak but few brambles along the creek. Toward the slope of the south side of the creek, the trees thin out. There is an old road still visible crossing the creek and ascending the bluff.

On the south side of Norris Creek there are more than 20 depressions about three feet wide and varying from five feet to eight feet in length. The orientation varies with the slope of the hill but the broad side of these pits usually faces the creek in a north to northwest direction. They are found at varying altitudes and on both sides of the old road.

Some of these pits have trees over six inches in diameter growing in them, indicating some age. As children the Ragan's played in them and recovered "minie" balls. From descriptions of these bullets, they were probably conical bullets of the minie pattern, rather than round balls.

No digging was done and no artifacts were recovered.

Several possibilities present themselves when interpretation is considered. There is a possibility that the features are natural. This is very unlikely given their location at various elevations, the sharp configuration of the sides and corners, and the piled earth on the downhill side.

A second possibility was offered that the pits could be from prospecting activities as there is a large amount of quartz in the area. This is also unlikely as the line of pits does not follow any observable outcrop of quartz but appears to have been cut into dirt rather than a mineral vein.

A third possibility is that the pits are remnants of graves. This does not appear likely since there is a graveyard at the top of the bluff along the old road. The graves observed in this cemetery do not conform to the pits on the bluff. The graves are shallow depressions, wider than the pits, and obviously sunken. The pits, however, are dug out and filled with leaves.

The fourth possibility is that the pits are entrenchments. Since entrenchments were uncommon during the Revolutionary War, except in sieges which did not occur in North Carolina, and since there was no activity in this area relating to the War of 1812, it is suspected that the pits date from the Civil War.

Since the bullets found on the site some time ago were minie balls, it would seem that the Civil War is the period of origin. During the Revolution, bullets were ball shaped rather than conical.

The orientation of these pits across an old road, facing north would seem to suggest that they are of Federal, rather than Confederate, construction. During 1865, Federal forces did more through the area in a general northwestward direction, heading toward Durham. The pits are not in a position to fire south, but are fairly well suited to fire northward.

It is the opinion of the investigating archaeologist that the pits represent the remains of a small Union army outpost covering the approaches

to a fight over Norris Creek during April 1865. Further research would be necessary before this could be confirmed, but any such activity would probably have been included in the Official Records of the War of Rebellion.

Owner Address

Local history Traditionally thought to be Revolutionary War trenches

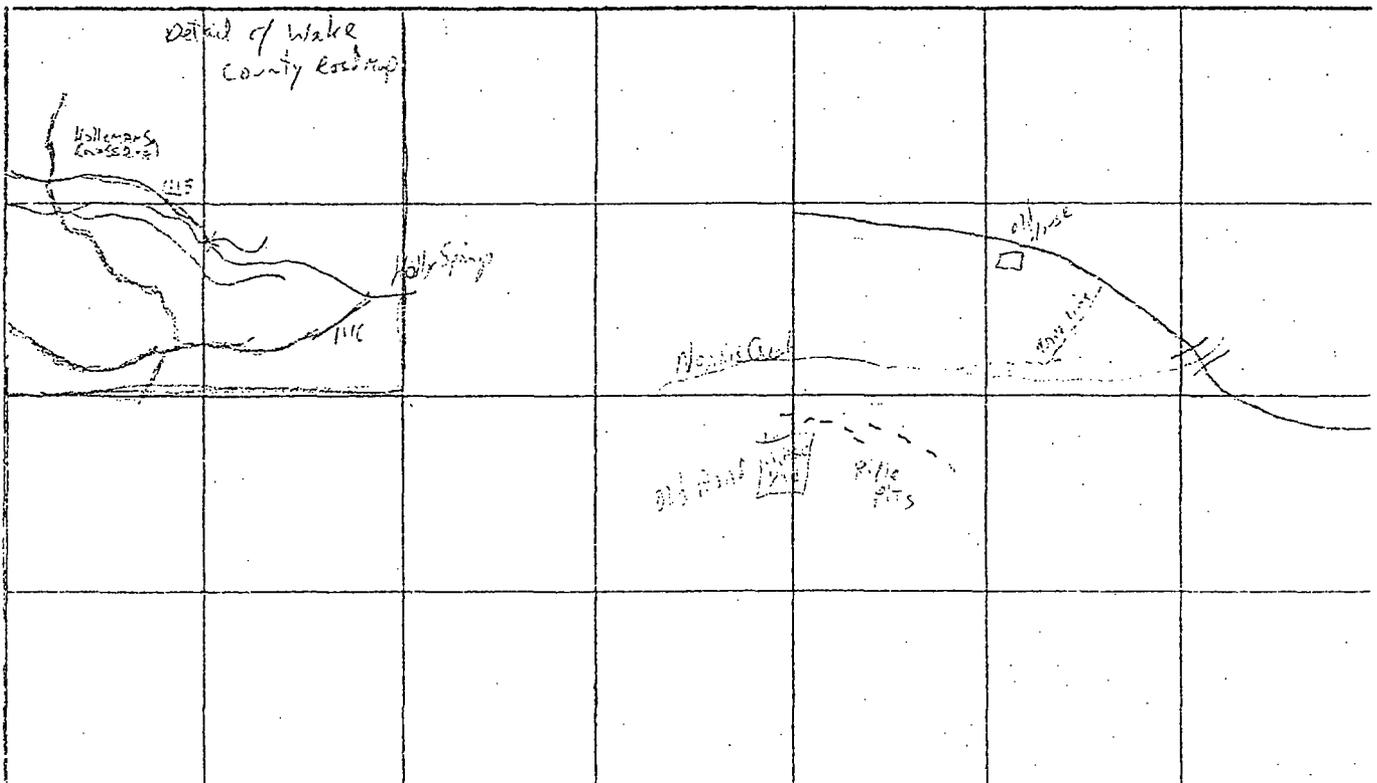

Plowing history none apparant. Vegetation 2nd rate timber

Type of soil rocky Erosion moderate

Remarks: The site consists of a series of pits filled in with leaves and some erosion
dirt along the north face of a bluff on the south side of Morris Creek. The dirt from
these pits is on the downhill side. An old road runs through the midpoint of the line
of pits heading southeast. The regular shape of the pits, as well as their positions
along the tactical crest of the slope, the downhill deposition of fill, and the lack
of other evidence of mining suggests the pits may be rifle pits.

Since there was no Revolutionary War activity in the area and, since the projectiles
recovered were of the conical type, I would be pretty certain that the pits are of the
Civil War. Since they face north, they are probably Union from April 1865.

New South Associates Technical Report #1372

MANAGEMENT SUMMARY

From June 5-9, 2006, New South Associates conducted an archaeological survey of portions of the Shearon Harris Nuclear Plant (SHNP) in Wake and Chatham Counties, North Carolina. SHNP is proposing to construct two new reactors and associated support facilities in the immediate vicinity of the current facility. The area of potential effect (APE) for this undertaking included approximately 180 acres of land in and around the existing nuclear facility where new construction is proposed. The vast majority of this area was severely disturbed from construction activities in the 1970s. In this area two archaeological sites (31WA1599 and 31WA1600) and three isolated finds (31WA1601, 31WA1602, and 31WA1603) were located and identified. None of these resources meet the criteria for listing in the National Register of Historic Places (NRHP) and are recommended not eligible.

In addition, the plant is also in the process of renewing its operating license with the Nuclear Regulatory Commission (NRC). The APE for this undertaking included an assessment of 13 archaeological sites that have been recorded by avocational archaeologists along the shoreline of Harris Lake since the time of the lake's impoundment in the 1970s. All of these sites are currently submerged with the exception of 31WA538. Portions of this site were successfully revisited. This site does not meet the criteria for the NRHP and is recommended not eligible.

As a result, neither expansion of the existing facility nor license renewal will have an adverse effect to significant archaeological sites. No further archaeological work is recommended.

ACKNOWLEDGEMENTS

This project would not have been possible without the assistance of several key individuals, particularly those at Progress Energy, all of whom went out of their way to support our work. Paul Snead provided technical assistance, guidance, and several maps of the project area, Jim Nevill shared his knowledge of the construction history of the plant, and Mike Swing made available a boat and his time to ferry us to a remote site location. Phil Moore, of Tetra Tech NUS, also provided guidance and offered many useful suggestions.

Fieldwork was conducted with the assistance of Josh Blackmon, Sally Huber, and Adam Green, all of whom were enthusiastic, energetic, and dedicated despite some of the challenging conditions.

I. INTRODUCTION

This report presents the results of an intensive archaeological survey of portions of the Shearon Harris Nuclear Plant (SHNP) located in Wake and Chatham Counties, North Carolina (Figure 1). This project was conducted in compliance with the National Historic Preservation Act (NHPA) of 1966, as amended, and its corresponding implementing regulations found at 36 CFR 800. Briefly, these regulations require federal agencies to consider the effects of their proposed actions and undertakings (e.g. licensing, permitting, or funding) on historic properties, and provide the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment. Historic properties are defined as districts, sites, buildings, objects, or structures that are listed in, or eligible for listing, in the National Register of Historic Places (NRHP).

Two separate, but related, undertakings were addressed for this project. First, SHNP is currently in the process of renewing its operating license issued by the Nuclear Regulatory Commission (NRC) for the existing facility. The plant's operation would remain essentially unchanged and no new effects would occur. However, because 13 previously recorded sites are present along the shoreline of Harris Lake, some effort was required to assess their eligibility for the NRHP and potential effects to significant resources.

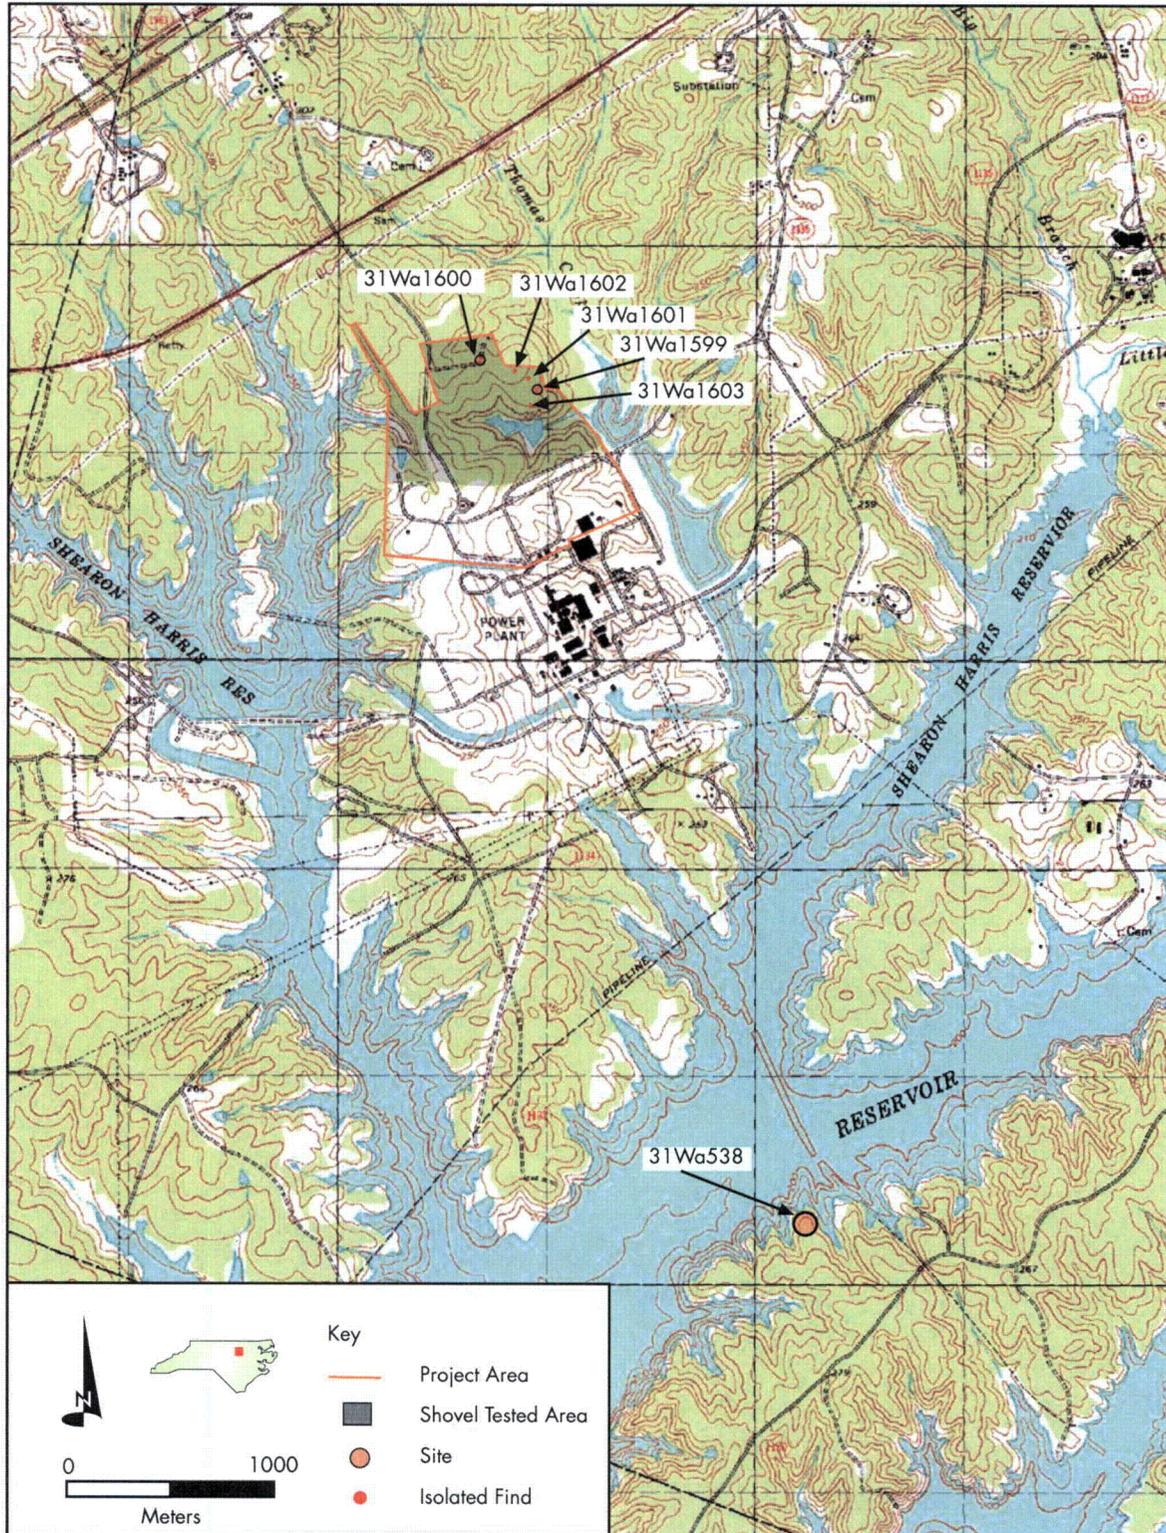

Second, SHNP is proposing to construct two new reactors and associated support facilities in the immediate vicinity of its main reactor. The area of potential effect (APE) for this undertaking is approximately 180 acres, all within the boundaries of the existing plant (Figures 2-3). Large portions of this area were cleared, graded, and filled at the time of initial construction in the 1970s (Figure 4). However, approximately 100 acres of land was determined to be relatively intact and undisturbed, with the possibility of intact archaeological sites.

The purpose of this survey was to locate and identify archaeological sites within the proposed project's APE, evaluate their significance for inclusion in the NRHP, and then consider the possible effects to these resources.

Fieldwork was conducted from June 5-9, 2006 under the direction of Shawn Patch, with assistance from Josh Blackmon, Sally Huber, and Adam Green. Shawn Patch returned to the project area on June 13, 2006 to revisit site 31WA538. Because of its remote location access to this site required the use of a boat provided by Harris Nuclear Plant and piloted by Mike Swing.

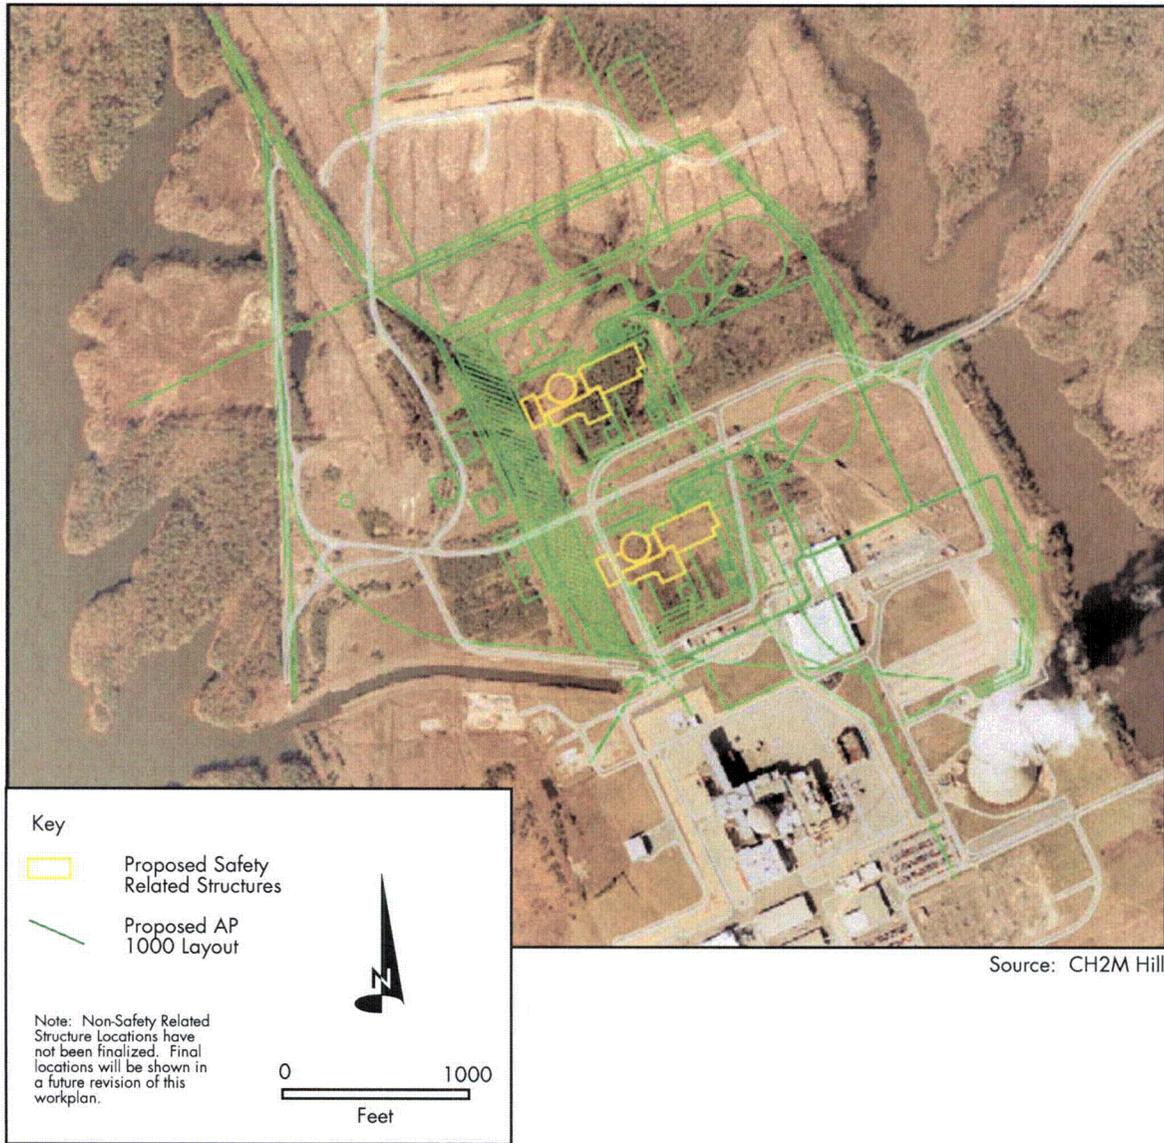

The remainder of this report discusses the environmental context (Chapter 2), cultural contexts (Chapter 3), methods (Chapter 4), results (Chapter 5), and recommendations (Chapter 6). Appendix A includes an artifact catalog.

II. ENVIRONMENTAL CONTEXT

Wake County is located in the eastern Piedmont physiographic province, an area of approximately 20,000 square miles between the Coastal Plain and Blue Ridge Escarpment. The Piedmont is essentially a highly dissected plateau dominated by well-rounded hills and ridges that trend northeast-southwest, with elevations ranging from 400' in the east to 2000' in the west. The characteristic topography of rounded and rolling hills is a direct result of stream action on rocks of unequal hardness. Three major river systems are present: the Dan River, which drains the northern portion; the Tar, Neuse, and Cape Fear Rivers, which drain the southern and eastern portions; and the Yadkin, Catawba, and Broad Rivers, which drain the western portion (Stuckey 1965:16). Of particular importance to the project area is the Cape Fear River, located only a few miles southwest of Harris Lake.

The Piedmont is well known for its diversity of lithic resources that were important to, and exploited by, prehistoric groups. The Carolina Slate Belt occupies much of the eastern Piedmont and is composed of volcanic and sedimentary rocks, most notably rhyolite, argillite, fine grained basalt and silicified slate. These rocks can be found in either primary outcrops (often related to quarrying activities) and as cobbles in secondary stream deposits. Quartz is also common and was widely used.

Soils in the project area belong to the Creedmoor-White Store association (Cawthorn 1970). These are found in gently sloping to hilly settings, are deep to moderately deep, and moderately well drained. They have a firm clayey subsoil and are derived from sandstone, shale, and mudstone. Both series are dominant in the western portion of the county and are typically found in forest conditions.

Soil conditions today are the result of destructive cultivation practices in historic times that have substantially altered the landscape. Soil depletion and land clearing led to severe erosion, particularly in the 1800s. By the 1930s conservation measures were introduced that helped restore soil productivity and stability. Ward (1983) points out the need to consider these factors when assessing Piedmont archaeological sites, particularly with respect to spatial and associational integrity. Upland sites may be the most susceptible to erosion and deflation, while floodplain and alluvial sites may be deeply buried under modern deposition.

Current understanding of paleoclimatic conditions is based on inferences from research outside the Piedmont and generalized reconstructions for the eastern United States (Delcourt and Delcourt 1981). Cooler and wetter conditions at the end of the Pleistocene yielded to a marked warming trend that also led to changes in vegetation and forest cover. Northern coniferous forests, dominated by spruce and pine, were slowly replaced by mixed hardwood forests, dominated by oaks and hickory, with pines common as conditions warmed further.

The modern climate is characterized by long, hot summers and short, cool winters. Highs in the summer average in the upper 80s while lows in the winter average in the upper 20s. Annual precipitation typically exceeds 45 inches, with afternoon thunderstorms common in the summer months.

III. CULTURAL CONTEXTS

Consideration of archaeological sites for the NRHP requires that they be evaluated within an appropriate historic context (Savage and Pope 1998:7). For an archaeological property evaluated for its information value, the historic context is the analytic framework within which the property’s importance can be understood (Hardesty and Little 2000:13). To that end, a brief overview of the major cultural developments throughout prehistory and history for the project area is presented below, and provides the framework for assessing the significance of archaeological resources located and identified during this project. This overview has been drawn from a variety of sources including management documents, published historic contexts, and relevant regional research. Table 1 presents a generalized overview of major cultural periods in the project area.

Table 1. Major Cultural Developments in the North Carolina Piedmont.

Period		Dates	Key Components/Phases
Historic		A.D. 1700-	Euroamerican
Protohistoric		A.D. 1500-1700	Caraway
Woodland			
	Late	A.D. 800-1600	Uwharrie, Haw River, Dan River, Donaha, Hillsboro, Early Saratown, Pee Dee
	Middle	300 B.C.-A.D. 800	Yadkin
	Early	500-300 B.C.	Badin
Archaic			
	Late	3000-500 B.C.	Savannah River
	Middle	6000-3500 B.C.	Stanly, Morrow Mountain I and II, Guilford, Halifax
	Early	8000-6000 B.C.	Hardaway, Palmer, Kirk
Paleoindian		10,000-8000 B.C.	Clovis, Cumberland, Quad, Simpson, Dalton, Hardaway

PREHISTORIC OVERVIEW

PALEOINDIAN

The Paleoindian period is commonly dated from 10,000 to 8000 B.C. Traditional hypotheses regarding human entrance into the New World have focused on access over the Bering Land Bridge and the corresponding ice-free corridor (Anderson et al. 1990:3).

However, in recent years there has been wider agreement in the professional community that early models of "Clovis first" need to be revised in the face of a growing body of evidence for earlier occupations (Cactus Hill in Virginia and Topper in South Carolina).

The most easily recognized artifacts from this period are the large, lanceolate, and often fluted projectile points, including Clovis (early) and Hardaway-Dalton (later). They are typically well made and it appears that these groups deliberately selected high quality stone for tool production. Other artifacts such as endscrapers, burins, and blades may also be diagnostic, although context is critical. Direct evidence for megafauna exploitation is rare in the Southeast, and it is likely that these groups actually practiced a much more generalized subsistence strategy. Few details are known about the settlement and subsistence systems of these groups, although they are frequently assumed to have been highly mobile, moving seasonally in response to different resources, and relatively low in population.

ARCHAIC

The Archaic period is dated from approximately 8000 to 500 B.C., and is frequently divided into early, middle, and late subperiods based on specific projectile point types. Its timing coincides with the onset of Holocene climatic conditions, a period that was warmer and wetter than the late Pleistocene. In addition to changes in temperature and precipitation, sea levels rose dramatically as continental glaciers began to melt. Human responses to these changes included increased population, expansion into new environmental zones, and regional variations in point styles.

Archaic groups are frequently assumed to have been highly mobile in response to seasonally available resources. Site types are typically divided into base camps (residential) and resource extraction or task specific sites (Ward 1983). The increase in tool diversity and locations of sites are often interpreted as an expression of an expanded subsistence and settlement system. Several models have been proposed for the Archaic period settlement and subsistence. Anderson and Hanson (1988) have proposed a drainage-based system, with bands of 50-150 people that roamed an entire drainage system throughout the year exploiting a variety of resources. Daniel (1998) has offered a competing model based on the presence and availability of high quality stone used in tool production.

Definition of the Archaic period sequence is largely due to Coe's (1964) work at several well-known and stratified sites. Projectile point types for the Archaic period include Palmer and Kirk (early), Stanly, Morrow Mountain (I and II), Guilford, and Halifax (middle) and Savannah River (late). During the Late Archaic two important technological innovations were added: soapstone, used for cooking slabs and vessel manufactures, and fiber tempered pottery. It is also during the Late Archaic that more permanent settlements are established and there is some evidence for intensive occupations.

WOODLAND

The Woodland period is dated from approximately 500 B.C. to A.D. 1600 and differs from the preceding Archaic period in several important ways. Hallmarks of this period are generally considered to be the appearance of pottery production on a large scale, more semi-sedentary settlements, and horticulture (Ward and Davis 1999:76). Our understanding of the Archaic to Woodland transition is somewhat muddy largely due to a high incidence of sites with artifacts from both periods.

In general, the Woodland is a time of increased sedentism with adaptive strategies focused on mixed hunting and intensive collecting. More permanent settlements are common in alluvial settings with structural remains, storage pits, and burials, all of which indicate an increase in social complexity and stratification. Ward (1983) indicated that there is little direct evidence for the presence of widespread maize agriculture and suggests it was not of major importance until the Late Woodland. Cultural developments were slow, gradual, and internal, with few outside influences (Ward and Davis 1999:78). As agriculture grew in importance so too did village life and social complexity, although hunting and gathering continued as a supplemental dietary force. This continuity is referred to as the Piedmont Village Tradition (Ward and Davis 1999:78-79).

Temporal divisions within the period frequently rely on changes in pottery styles, which are believed to be chronologically sensitive. The Early Woodland is typically characterized by the Badin series, with cord and fabric marked, net impressed, and plain types. Yadkin series ceramics, distinguished by quartz temper, are also present at this time but become more prevalent during the Middle Woodland along with large triangular projectile points. The Badin and Yadkin series are not always easily distinguished and may represent variation within an assemblage or different points along a technological continuum. By the Late Woodland large and small sites are focused on the floodplains of major streams and small triangular points such as Uwharrie, Caraway, and Pee Dee types are common.

Throughout the larger Southeast the classic Mississippian period is marked by the appearance of large villages, often times palisaded, public architecture, earthworks, a reliance on maize agriculture, the development of a ruling elite, and a hierarchical structure within territorially defined chiefdoms. Temple mounds are common along with associated minor ceremonial centers, villages, hamlets, and small farmsteads. With the exception of the Town Creek Mound in Montgomery County, however, these aspects are typically not found in the North Carolina Piedmont.

While the rest of the Southeast may have experienced a full-blown Mississippian adaptation, groups in the Piedmont appear to have maintained Late Woodland adaptive strategies, although the Pee Dee culture likely did exert some influence in the area. The Pee Dee were heavily influenced by the South Appalachian Mississippian tradition rather than the Piedmont Village Tradition (Coe 1995; Ward and Davis 1993). The distinctive pottery, with plain, complicated stamped, simple stamped, and cord-marked types, show a strong connection with other Mississippian cultures to the south and west.

By approximately A.D. 1500 Siouan groups were present along the Haw, Eno, and Flat Rivers. This native group was the first to experience contact with European traders and sites from this period often contain glass beads, clay pipes, gunflints, iron axes, and copper bells (Ward 1983; Ward and Davis 1993).

HISTORIC OVERVIEW

Between the 1620s and 1670s there was a marked increase in contact between Native American groups and Europeans. By that time traders from Virginia were making regular visits to the Piedmont. In 1701 John Lawson visited the area and by the 1730s there was an increasing flow of immigrants from Virginia, Maryland, Pennsylvania, and the North Carolina Coastal Plain. Wake County was established by an act of the North Carolina Legislature in 1771 (Corbitt 1987). By 1792 the capital city of Raleigh had been chosen and laid out, although growth was slow for several decades. There was no direct military action in the Wake County area during the Civil War because the war ended as Sherman approached Raleigh from Goldsboro.

Due to the rural nature of the area, agriculture was the dominant activity through the 18th and 19th centuries, with all suitable alluvial and upland environments in cultivation. Until the 1820s subsistence farming prevailed, with a focus on corn, dairy, and hogs. With the establishment of transportation routes and infrastructure, however, the emphasis changed to market-oriented production. After the Civil War, with the emergence of the tenant farming system, production changed dramatically toward cash crops like cotton and tobacco. These practices in turn led to severe soil depletion and erosion. Toward the end of the 19th and beginning of the 20th centuries demographic patterns changed as people left farms and headed for urban areas.

PREVIOUS RESEARCH IN THE AREA

The area around Harris Lake has been the subject of numerous archaeological projects over the last 40 years. Several intensive studies were conducted prior to the inundation and construction of B. Jordan Reservoir, located just a few miles northwest of the project area (Clagget and Cable 1982; Fitting 1979; McCormick 1969, 1970). Ward (1978, 1979) conducted the original survey for the Shearon Harris cooling lake. In more recent years several additional compliance related projects have been undertaken in close proximity to Harris Lake including a regional airport (Lautzenheiser 1988), a low-level radioactive waste disposal site (Webb 1992), and portions of the Western Wake Expressway (Millis and Pickett 2002).

Ward's (1978) original work in what was to become Harris Lake covered approximately 4000 acres of land up to the 220' contour. At the time of this work more than 95% of the survey area was heavily wooded. It is clear that survey methods then were focused almost exclusively on surface inspection.

In fact, Ward (1978:3) clearly indicated that despite the vegetation and heavy forest cover, there “was a complex of logging roads and farm trails [that] allowed access and provided transects with good surface visibility” and that “in areas of dense ground cover that prevented surface inspection large patches were raked clear in an attempt to reveal any concealed artifact clusters”. From a critical and modern perspective, Ward’s work was limited in both its methodological rigor and intensity.

Despite the limited scope of this work, Ward successfully identified 37 sites, all but one of which was prehistoric. These sites represent a wide range of periods and settings, although most were interpreted as Archaic because of the lack of ceramics and high frequencies of lithics. None of these sites were recommended for additional work.

Lautzenheiser (1988) performed a survey of approximately 440 acres just east of Harris Lake for a regional airport expansion. The survey area included uplands between Utley Creek and Norris Branch. Of the 13 sites identified as a result of this project, eight were prehistoric (all lithic artifacts) and five dated to the historic period. Despite strong evidence for widespread use of this area, the prehistoric sites were found to be in poor condition with their spatial and depositional integrity highly compromised by historic farming practices. In addition, no diagnostic artifacts were recovered.

Of the archaeological work conducted to date in the immediate vicinity of Harris Lake, Webb’s (1992) is probably the most systematic. This survey of approximately 847 acres included a wide range of ecological and topographic zones and resulted in the identification of 73 sites. Of these 57 were recommended not eligible for the NRHP, 10 were avoided, and six were recommended for additional testing to firmly evaluate their eligibility.

In a survey for a 12.5 mile segment of the Western Wake Expressway, Millis and Pickett (2002) identified 14 sites, 11 isolated finds, and one cemetery. The vast majority of these were prehistoric, low-density, non-diagnostic lithic scatters located on deflated/eroded landforms. Interestingly, the survey strategy focused specifically on high probability areas with limited investigation of other areas, although the results were somewhat unexpected because most sites were identified in the low probability areas. Millis and Pickett (2002:87) concluded that simply focusing on high probability targets is probably insufficient for the identification of archaeological sites.

PREVIOUSLY IDENTIFIED ARCHAEOLOGICAL RESOURCES

A review of the site files maintained at the North Carolina Office of State Archaeology (NCOSA) revealed the presence of 50 archaeological sites within the boundaries of the existing pool (Tables 2-3). Ward (1978) identified 37 sites, all of which are now submerged in Harris Lake. Thirteen additional sites were recorded in 1982, while the lake was filling (Table 3). They were not recorded by professional archaeologists and have not been previously evaluated for inclusion in the National Register of Historic Places (NRHP). Very few details for these sites are available beyond general locations and in some cases indications of cultural affiliation. We attempted to revisit these sites and these efforts will be discussed in the Results section of the report.

Table 2. Sites Identified During Ward's (1978) Archaeological Survey, Prior to the Inundation of Harris Lake.

Site	Date Recorded	Type	Component(s)	NRHP Status

Table 3. Sites Identified by Advocational Archaeologists Before Harris Lake Reached Full Pool.

Site	Date Recorded	Elevation	Site Type	Component(s)	NRHP Status
9CH605	2/17/82	195'	unknown	unknown	unknown
9WA528	2/3/82	210'	prehistoric	Archaic, Woodland	unknown
9WA529	2/3/82	225'	prehistoric	Archaic, Woodland	unknown
9WA530	2/17/82	215'	prehistoric	Archaic, Woodland	unknown
9WA531	2/17/82	210'	unknown	unknown	unknown
9WA532	2/17/82	205'	prehistoric	Woodland	unknown
9WA533	2/17/82	198'	prehistoric	Archaic, Woodland	unknown
9WA534	2/17/82	210'	prehistoric	Archaic, Woodland	unknown
9WA535	2/17/82	220'	prehistoric	Archaic, Woodland	unknown
9WA536	2/17/82	200'	prehistoric	Archaic	unknown
9WA537	2/17/82	210'	prehistoric	Woodland	unknown
9WA538	2/17/82	215'	prehistoric	Archaic	unknown
9WA539	2/17/82	220'	prehistoric	Archaic	unknown

These sites are all prehistoric and range in size from a few artifacts to much larger assemblages. The Archaic period is probably the best represented with numerous projectile points of the Palmer, Kirk, Morrow Mountain (I and II), Guilford, and Savannah River types, and other lithic artifacts. Many sites also have strong Woodland components, including ceramics, with the Badin and Yadkin series most common.

The forms for these sites do not include any reporting information so it is difficult to evaluate the quality and accuracy of the locations. However, based on the recording dates, locations, and information from HNP regarding the lake impoundment rates, it appears that these sites were all identified in clear-cut areas along the shoreline as the lake was filling and well before it reached full pool in 1983. This would help explain why they were not identified during Ward's original work in the 1970s and why they are submerged today. It does not appear that any of the sites were investigated beyond surface inspections so it is almost impossible to draw any conclusions about their spatial and depositional integrity.

When considered together these studies clearly indicate an overwhelming occupation of the area throughout the prehistoric period. Although occupations no doubt varied and fluctuated through time it does appear relatively constant. Many of the known sites are in upland settings and likely reflect task specific and resource extraction activities.

IV. METHODS

ARCHIVAL METHODS

Prior to beginning fieldwork we conducted a literature review and historical research. In May 2006 staff from New South Associates (NSA) visited the NCOSA to review information on existing archaeological sites and previous work in and around the project area. At that time we discussed the project with John Mintz of the NCOSA.

NATIONAL REGISTER OF HISTORIC PLACES ELIGIBILITY CRITERIA

The significance of historic properties is evaluated according to the criteria established in 36 CFR Part 60.4, Criteria for Evaluation. 36 CFR 60.4 states that the quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling and association and

- (a) that are associated with events that have made a significant contribution to the broad patterns of our history; or
- (b) that are associated with the lives of persons significant in our past; or
- (c) that embody the distinctive characteristics of a type, period, or method of construction, or that may represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- (d) that have yielded, or may be likely to yield, information important in prehistory or history.

Assessing significance is probably the most difficult part of the Section 106 process because there are different types of significance (Schiffer and Gummerman 1977:239-247) Under Criteria A, B, and C, an archaeological property must have demonstrated its ability to convey its significance, while under Criterion D, only the potential to yield information is required (Hardesty and Little 2000:33; King 1998:77-80). Criterion D is frequently used for the evaluation of archaeological sites. Archaeological sites identified within the project's APE were evaluated according to the criteria outlined above, with particular emphasis on their potential to contribute new and significant information to local, regional and national research. The quality of archaeological information must be addressed in terms of historic contexts, research questions, and data requirements needed to answer specific questions. Integrity, artifact density, and potential for intact features and subsurface deposits are some of the key factors that ordinarily are considered during the evaluation of a site for inclusion in the NRHP.

FIELD METHODS

An intensive pedestrian survey was conducted for the project area by a four-person crew. Efforts to locate and identify archaeological resources in the field relied on a combination of two primary methods: shovel testing and surface inspection of exposed areas. In the new construction area systematic shovel tests were placed at 30 meter intervals in areas identified as having high site potential, such as terraces above creeks, ridge tops, and gently sloping or level areas. In most cases crew members walked in parallel transects spaced approximately 30 meters apart. Additional shovel tests were excavated in a judgmental fashion as field conditions warranted. The first positive shovel test was designated ONOE and radial tests were then excavated in a 15 meter interval grid along the major axes (typically oriented in the cardinal directions). Shovel tests were not excavated on steeply sloping terrain (greater than 20 degree slope), low lying/wet areas, highly disturbed areas or areas with more than 25% surface visibility. Shovel tests consisted of approximately 30 centimeter diameter holes excavated to subsoil, with all fill screened through 0.25" (0.64 centimeter) mesh hardware cloth. For site revisits we used the same methods but also focused on the shoreline areas.

For this project, an archaeological site was defined as any shovel test producing three or more artifacts or any two shovel tests in close proximity (less than 30 meters) producing at least one artifact each, or any surface collection with more than three artifacts. To more precisely define site boundaries, additional shovel tests would be excavated in a cruciform pattern at close intervals (5-15 meters). Two or more negative shovel tests define a site boundary.

LABORATORY METHODS

All artifacts recovered were examined in the laboratory at the conclusion of field research. The artifacts were cleaned and analyzed at NSA's Stone Mountain office. The analysis of the collection followed professionally accepted standards with a level of intensity suitable to the quantity and quality of the remains. All artifacts were prepared for curation according to North Carolina standards.

V. RESULTS

ARCHAEOLOGICAL SURVEY

Because of the nature of the two undertakings, separate areas are included here and discussed individually: the proposed new construction around the existing facility and the shoreline of Harris Lake. In the area designated for new construction two archaeological sites and three isolated finds, were identified (Table 4).

Table 4. Archaeological Resources Located and Identified in the New Construction Area.

Official Number	Resource Type	Component	NRHP Recommendation
31WA1599	Site	Prehistoric	Not eligible
31WA1600	Site	Prehistoric	Not Eligible
31WA1601	Isolated Find	Prehistoric	Not Eligible
31WA1602	Isolated Find	Prehistoric	Not eligible
31WA1603	Isolated Find	Prehistoric	Not eligible

Initial work began inside the existing plant facility, known as the "Owner Controlled Area" (OCA). This area includes all buildings and infrastructure associated with the nuclear plant itself and is best described as highly developed. When the plant was originally constructed in the 1970s most of the land was graded and filled, as needed, to achieve a consistent and level contour at approximately 260' (Jim Nevill, personal communication 2006).

All of the proposed new construction will occur north and west of the existing facility, an area roughly bisected by an access road that runs east-west. Immediately south of this access road is land that was obviously graded in the 1970s; it is flat, uniform, and there are railroad tracks running from the plant (Figure 5). West of the tracks has also been impacted as shown on an aerial photograph from the 1970s and verified in the field (Figure 6). These areas were not subjected to intensive field survey.

The focus of our field investigations was the northern sections. Landforms in these areas are relatively intact, although it does appear that they have been logged at some time over the past 30 years. Vegetation varies considerably, with mixed hardwoods and planted pine the most common. In those areas that were logged and cleared undergrowth is thick and heavy, consisting largely of briars. There is a large pond located approximately in the center of the survey tract fed by a small stream and laced with a series of beaver dams. The far northern portion of the survey area is a private landfill used by HNP that is no longer in service (Figures 7-8).

ARCHAEOLOGICAL SITES

Site 31WA1599 was identified while shovel testing in parallel transects (Figure 9). The site is located in an upland setting on a relatively minor slope. Of the 14 STs, only two were positive. In general, each ST was relatively shallow (20-30cm) and a typical profile consisted of 10-15 cm of dark brown loam (humic layer) underlain by light brown silty sand (subsoil).

The artifact assemblage (n=2) from this site is extremely small and consists solely of quartz flakes. With no diagnostic artifacts it is virtually impossible to assign this site to a particular temporal period. However, non-diagnostic lithic scatters like this one are extremely common throughout the Piedmont, and numerous, better-preserved examples with larger artifact samples, are known to exist elsewhere. This site has virtually no information potential beyond what has already been learned from the current study. The artifact count is too low to permit detailed analyses that might be relevant to regional research questions and the presence of features is not expected given the site's setting and context. Therefore, site 31WA1599 should be considered not eligible for the NRHP and no further archaeological work is recommended for this site.

Site 31WA1600 was identified on the surface of an old field road and adjacent landfill (Figure 10). A few lithic artifacts were present in this area and observed during a general walkover of exposed ground. They occurred in a clearly eroded/deflated setting with poorly sorted rocks and gravels directly on hard clay. Just north of the fence is an old landfill that was used by HNP until fairly recently. Although surface visibility is excellent in this area it is largely because of the recent fill brought in to cap the trash.

The artifact assemblage (n=4) from this site is very small and includes a rhyolite biface (in 3 separate fragments) and a single rhyolite core. The core was recovered from the landfill area north of the fence. Overall this site has poor context and no spatial or depositional integrity. Its formation is either the result of severe erosion or re-deposition, or some combination of both. For these reasons features are not expected and it has no information potential beyond what has been learned from this study. Therefore, site 31WA1600 should be considered not eligible for the NRHP and no further work is recommended for this site.

In support of the license renewal, and at the request of the NCOSA, we attempted to revisit 13 previously recorded sites to verify their locations, assess their condition, and, if possible, evaluate them for inclusion in the NRHP. Inspection of the USGS maps clearly revealed that up to seven of the 13 sites were submerged while six appeared to be along the current shoreline. Field efforts were focused on identifying those sites along the shoreline. They were recorded by avocationalists in 1982 after large portions of the new reservoir had been clear-cut, but prior to inundation. As a result of fieldwork, and after further review of the site forms, we can safely conclude that most of these sites, as originally recorded, appear to be submerged below the 220' contour.

Although we attempted to revisit six of the 13 previously recorded sites within the existing pool we could only tentatively identify site 31WA538 (Figures 11-12). This site is located on the northern edge of a large peninsula on White Oak Creek. There is a modern boat landing just east of the site that served as an access point and we walked the shoreline to get to the site. This is a multi-component site with both prehistoric and historic artifacts. No artifacts were recovered along the shoreline, where the site was expected to be based on the original site form location. However, because we did locate artifacts on the same landform it made sense to retain the same site number.

Seven of the 27 STs were positive. Stratigraphic profiles were generally shallow (i.e. less than 30 cm) and consisted of a well-defined organic layer (5-10cm) underlain by brown silty clay. Vegetation varies but in the area is generally wooded with pines and mixed hardwoods and thick undergrowth.

The artifact assemblage is small (n=13) with debitage, bottle glass, milk glass, whiteware, and ironstone (Table 5). The historic artifacts likely reflect a dumping episode as there are no architectural remains and structures do not appear on the USGS map. The presence of an old logging road lends support to this interpretation. The prehistoric component is essentially non-diagnostic and limited in diversity. Its formation is likely the result of a resource extraction or task specific activity.

Table 5. Artifacts Recovered from Site 31WA538.

Shovel Test	Quantity	Artifact Class	Artifact Type
30S 15E	2	Debitage	Quartz Flake - Interior Fragment
30S 0E	2	Debitage	Quartz Flake - Interior Fragment
45S 30W	2	Kitchen Group	Olive Green Machine Made Bottle Glass
0N 0E	2	Debitage	Quartz Flake - Interior Fragment

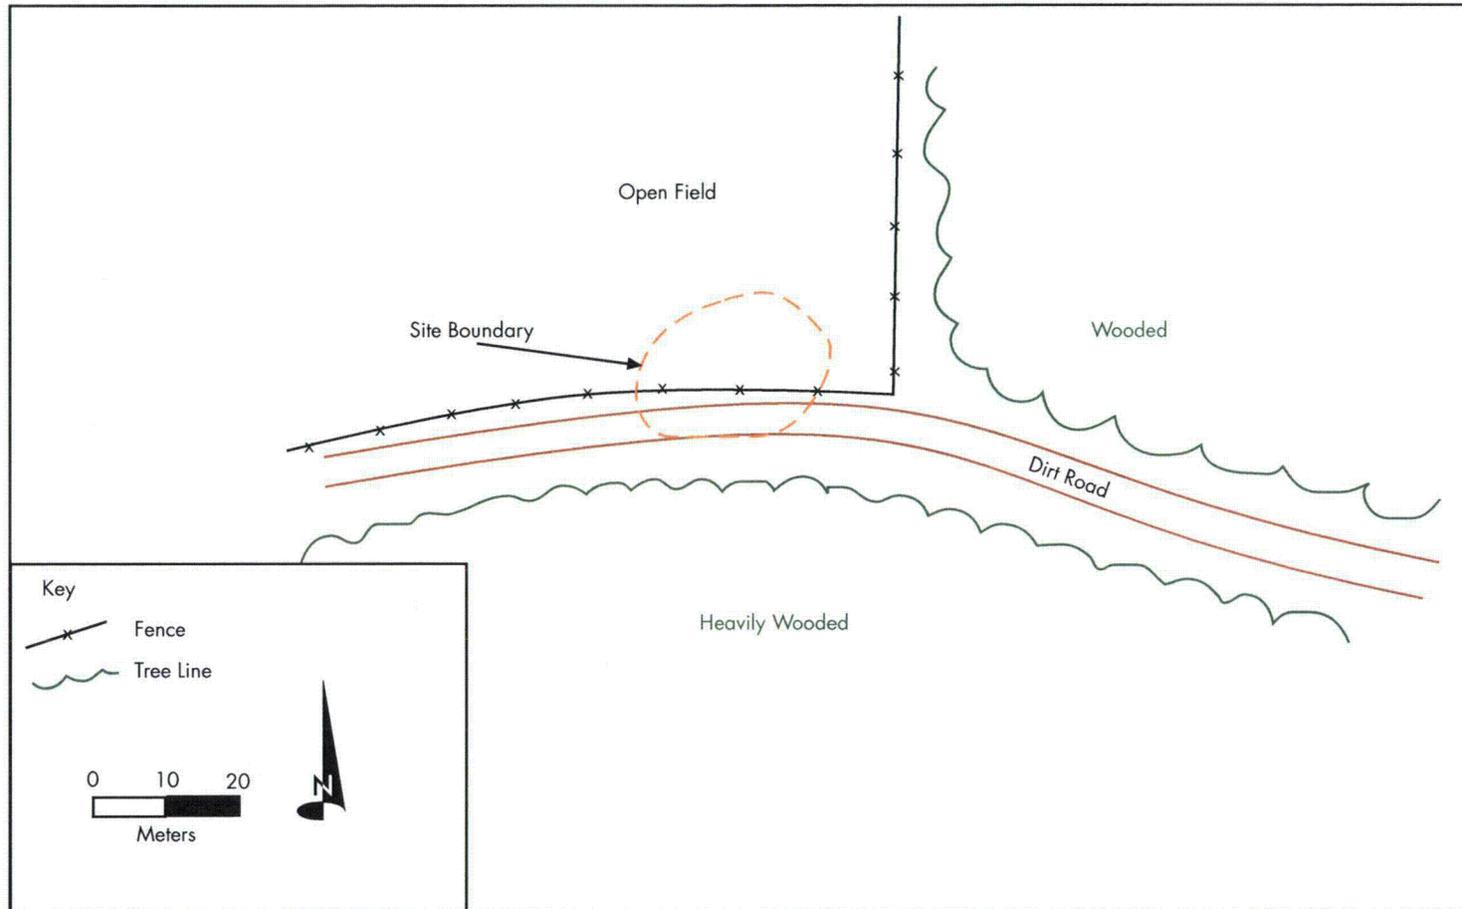

Figure 10
 Sketch Map of Site 31WA1600

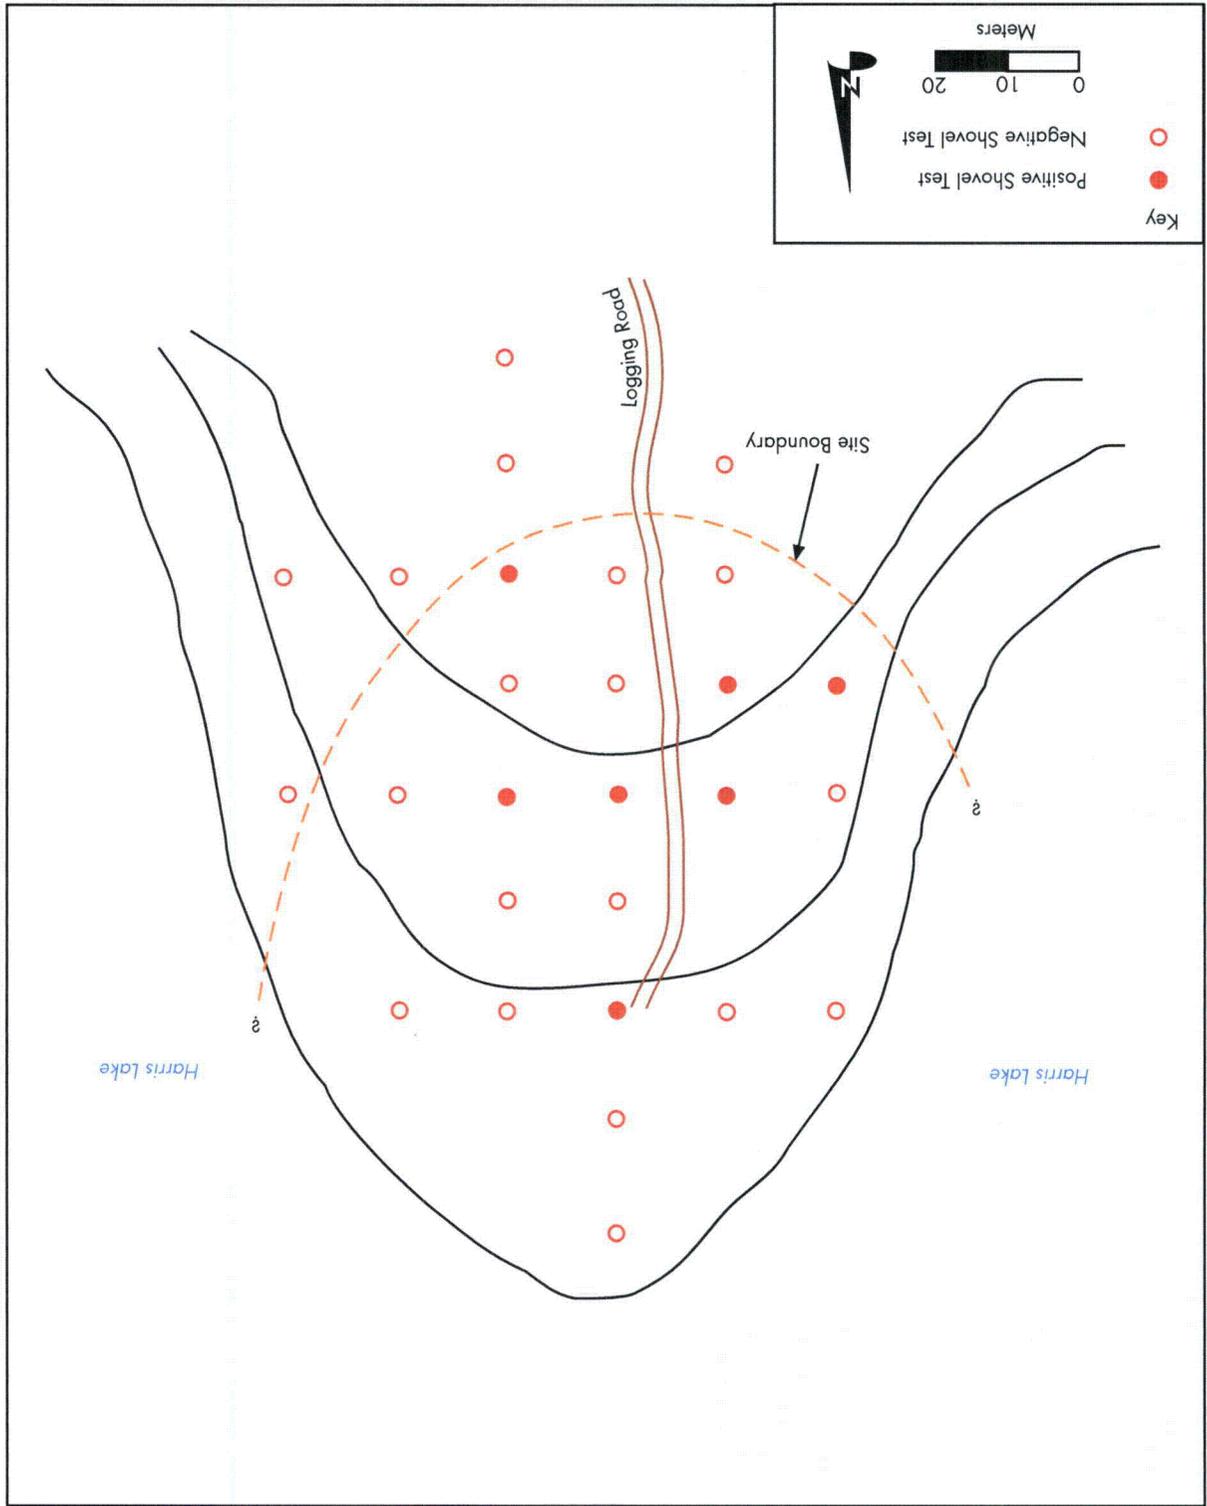

Figure 11
Sketch Map of Site 31WA538

Figure 12
Photograph of Site 31WA538 Showing Logging Road and Vegetation

Based on the portion of this site above the water level its information potential is severely limited and features are not expected to occur. The artifact assemblage is limited in both sample size and diversity. No significant research questions could be addressed with additional study. For these reasons site 31WA538 should be considered not eligible for the NRHP and no further work is recommended.

ISOLATED FINDS

Three isolated finds were also identified during the course of this project. Isolated finds are typically defined as single artifacts or small clusters that do not meet the definition of an archaeological site and are rarely considered eligible for the NRHP. However, their location is important to a more comprehensive understanding of human use of the landscape.

31WA1601 (IF #1) consists of two quartz flakes found on the surface of a road/clearing in the northern portion of the new construction area. A general walk over of the exposed area did not reveal any additional artifacts. This is an area that has experienced severe erosion and the artifacts were present on a hard red clay subsoil with no associated context.

31WA1602 (IF #2) consists of a single quartz biface fragment on the surface of the same road/clearing as IF #1, but located approximately 40 meters to the west. No additional artifacts were identified in a general walkover and surface visibility was excellent. Again, this is an area of severe erosion and the biface was resting directly on top of a hard clay subsoil.

31WA1603 (IF #3) consists of a single quartz flake identified while shovel testing in the proposed new construction area. Additional shovel tests were excavated in a 15 meter grid oriented in the cardinal directions, all of which were negative.

VI. CONCLUSIONS

This project focused on an archaeological survey of portions of the Shearon Harris Nuclear Plant to address the effects of two separate undertakings on significant archaeological resources. Each undertaking required a distinct APE and slightly different field methods.

With respect to the proposed new construction area, two archaeological sites and three isolated finds were located and identified. Based on assemblage size, context, integrity, and prevailing research questions, none of these resources is recommended eligible for the NRHP. The proposed new construction will not have an adverse effect to significant archaeological resources and we recommend that this undertaking proceed with no further work.

With respect to the license renewal, fieldwork focused on trying to revisit, define, and evaluate the 13 sites recorded in 1982 along the Harris Lake shoreline prior to its inundation to full pool. Only site 31WA538 was tentatively identified because the remaining sites are now submerged. Based on assemblage size, context, integrity, and prevailing research questions, this site is recommended not eligible for the NRHP. The proposed license renewal will not have an adverse effect to significant archaeological resources and we recommend that this undertaking proceed with no further work.

There are no Toxic/Hazardous Air Pollutant emission factors for dual-fuel engines.

LGD2000 Revision C dated March 27, 2000

Pollutants in red are federally regulated hazardous air pollutants (HAPs) only. Pollutants in purple are NC regulated toxic air pollutants (TAPs) only. All other pollutants are regulated as both HAPs and TAPs.
 Factor quality ratings containing "<" indicate an AP-42 emission factor based on test results being below detection.
 Emission factors are from AP-42 Chapter 3, Section 3, Gasoline and Diesel Industrial Engines, dated October 1996.
 Hourly emission rates for all pollutants are based on the hourly engine output. Annual emissions are based on the annual engine output.
 Daily emissions are based on operation at the hourly input rate for 24 hours.

NO_x control is via ignition timing retard.

There are no Toxic/Hazardous Air Pollutant emission factors for dual-fuel engines.

LGD2000 Revision C dated March 27, 2000

Pollutants in red are federally regulated hazardous air pollutants (HAPs) only. Pollutants in purple are NC regulated toxic air pollutants (TAPs) only. All other pollutants are regulated as both HAPs and TAPs. Factor quality ratings containing "<" indicate an AP-42 emission factor based on test results being below detection. Emission factors are from AP-42 Chapter 3, Section 3, Gasoline and Diesel Industrial Engines, dated October 1996. Hourly emission rates for all pollutants are based on the hourly engine output. Annual emissions are based on the annual engine output. Daily emissions are based on operation at the hourly input rate for 24 hours.

Internal Combustion Engines Emissions Calculator ICE2000 Revision B

Instructions: Please provide the information shown in blue below. The applicability of this spreadsheet is limited to gasoline engines up to 250 hp and diesel engines up to 600 hp. Please note that, when used in conjunction with permit applications, any value entered for annual operations of these engines may become a permit limit.

For annual emissions enter either: (1) Annual Electrical Output, (2) Engine Output and Annual Operation (leave the formula for calculating Annual Electrical Output unchanged) or (3) Generator Output (kW) and Annual Operation (remember to copy the resulting Annual Electrical Output to the appropriate cell to the left).

User Input		This section can be used to calculate kW-hr output from hours of operation and engine hp output. This can be useful for operators with hour meters but no Watt-hour meters. It assumes full load operation resulting in conservative emission estimates.		DISCLAIMER: This spreadsheet is for your use only and should be used with caution. DENR does not guarantee the accuracy of the information contained. This spreadsheet is subject to continual revision and updating. It is your responsibility to be aware of the most current information available. DENR is not responsible for errors or omissions that may be contained herein.

Pollutants in red are federally regulated hazardous air pollutants (HAPs) only. Pollutants in purple are NC regulated toxic air pollutants (TAPs) only. All other pollutants are regulated as both HAPs and TAPs. Factor quality ratings containing "<" indicate an AP-42 emission factor based on test results being below detection. Emission factors are from AP-42 Chapter 3, Section 3, Gasoline and Diesel Industrial Engines, dated October 1996. Hourly emission rates for all pollutants are based on the hourly engine output. Annual emissions are based on the annual engine output. Daily emissions are based on operation at the hourly input rate for 24 hours.

Internal Combustion Engines Emissions Calculator ICE2000 Revision B

Instructions: Please provide the information shown in blue below. The applicability of this spreadsheet is limited to gasoline engines up to 250 hp and diesel engines up to 600 hp. Please note that, when used in conjunction with permit applications, any value entered for annual operations of these engines may become a permit limit.

For annual emissions enter either: (1) Annual Electrical Output, (2) Engine Output and Annual Operation (leave the formula for calculating Annual Electrical Output unchanged) or (3) Generator Output (kW) and Annual Operation (remember to copy the resulting Annual Electrical Output to the appropriate cell to the left).

User Input		<i>This section can be used to calculate kW-hr output from hours of operation and engine hp output. This can be useful for operators with hour meters but no Watt-hour meters. It assumes full load operation resulting in conservative emission estimates.</i>		DISCLAIMER: This spreadsheet is for your use only and should be used with caution. DENR does not guarantee the accuracy of the information contained. This spreadsheet is subject to continual revision and updating.
