Subject: Westinghouse Fundamental Nuclear Material Control Plan Revision (License No. SNM-33, Docket No. 070-36)

Dear Sirs:

Westinghouse Electric Company LLC (WEC) Hematite Decommissioning Project (HDP) herein requests NRC approval of a license amendment for the enclosed revision of the Fundamental Nuclear Material Control Plan. This revision was processed in accordance with the provisions of 10 CFR 70.32(c)(2)(ii). This revision was reviewed and evaluated per internal HDP policies and procedures and this process determined the changes made do not decrease the effectiveness of the material control and accounting program. The revisions are primarily administrative in nature and are related to a management structure which assures clear overall responsibility for material control and accounting functions, independence from production responsibilities, separation of key responsibilities, and adequate review and use of critical material control and accounting procedures. The changes from the previously approved revision are identified in the change log (pages i and ii) as well as with revision bars in the right hand margin within the document.

The enclosure contains information concerning the HDP material control and accounting program and is subject to withholding from public disclosure in accordance with 10 CFR 2.390(d). This transmittal letter when separated from the enclosure is not subject to withholding pursuant to 10 CFR 2.390.
