Subject: Re: diffusion cracks

It is in there. The variables cr_area_a and cr_area_b are the intercept and slope of an equation that expresses the total crack area of the welds as a function of time. The variable cr_length is the crack length. They are read in from the file ebsrelglcl5d.inp.

Dick,

I your write up you mention that the number of cracks are required input to the diffusion model, but I don't see how they are input. Please clarify.

thanks,

ron j
