Decommissioning Funding Plan

Dear Mr. Lawyer:

Attached you will find the Parent Company guarantee, the letter from Chief Executive Officer, the letter from Chief Financial Officer, Parent Company guarantee financial test, Independent Accountants Report and Decommissioning Funding Plan revised on March 2008 for Schering Corporation NRC Broad Scope Byproduct Material License No.: 29-00244-02 covering fiscal year 2008.

If you have any questions or require any additional information please contact me at (908) 740-4622.

Very truly yours,

Moji Moshashaee
Radiation Safety Officer
Schering Corporation

NMSS/RGN1 MATERIALS-002

PARENT COMPANY GUARANTEE

Guarantee made this 24 March 2009 by Schering-Plough Corporation, a corporation organized under the laws of the State of New Jersey, herein referred to as "guarantor," to the U.S. Nuclear Regulatory Commission (NRC), beneficiary, on behalf of our subsidiary Schering Corporation, of 2000 Galloping Hill Road, Kenilworth, NJ 07033

Recitals

1. The guarantor has full authority and capacity to enter into this guarantee under its bylaws, articles of incorporation, and the laws of the State of New Jersey, its State of incorporation. Guarantor has approval from its Board of Directors to enter into this guarantee.
2. This guarantee is being issued to comply with regulations issued by the NRC, an agency of the U.S. Government, pursuant to the Atomic Energy Act of 1954, as amended, and the Energy Reorganization Act of 1974. NRC has promulgated regulations in Title 10, Chapter 1 of the Code of Federal Regulations, Part 30 which require that a holder of, or an applicant for, a materials license issued pursuant to 10 CFR Part 30 provide assurance that funds will be available when needed for required decommissioning activities.
3. The guarantee is issued to provide financial assurance for decommissioning activities for:

Schering Corporation at the following locations:
2000 & 2015 Galloping Hill Road, Kenilworth, NJ 07033
144 Route 94, Lafayette, NJ 07848
556 Morris Avenue, Summit, NJ 07901
1011 Morris Avenue, Union, NJ 07083
104 Orange Street, Bloomfield, NJ 07003
(All facilities above are covered by License Number 29-00244-02)

as required by 10 CFR Part 30. The decommissioning costs for these activities are as follows:

2000 & 2015 Galloping Hill Road, Kenilworth, NJ 07033 - \$691,518
144 Route 94, Lafayette, NJ 07848 - \$38,928
556 Morris Avenue, Summit, NJ 07901 - \$17,672
1011 Morris Avenue, Union, NJ 07083 - \$12,659
104 Orange Street, Bloomfield, NJ 07003 - \$14,022

NONNEGOTIABLE

4. The guarantor meets or exceeds the following financial test criteria b as described below and agrees to comply with all notification requirements as specified in 10 CFR Part 30 and Appendix A to 10 CFR Part 30.

The guarantor meets one of the following two financial tests:

- (a)(i) Two of the following three ratios: a ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5; and
- (a)(ii) Net working capital and tangible net worth each at least six times the costs covered by financial tests; and
- (a)(iii) Tangible net worth of at least \$10 million; and
- (a)(iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the costs covered by financial tests.

OR

- (b)(i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB as issued by Standard & Poor's, or Aaa, Aa, A or Baa as issued by Moody's; and
- (b)(ii) Tangible net worth at least six times the costs covered by financial tests; and
- (b)(iii) Tangible net worth of at least \$10 million; and
- (b)(iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the costs covered by financial tests.

5. The guarantor has majority control of the voting stock for the following licensees covered by this guarantee:

Schering Corporation at the following locations:
2000 & 2015 Galloping Hill Road, Kenilworth, NJ 07033
144 Route 94, Lafayette, NJ 07848
556 Morris Avenue, Summit, NJ 07901
1011 Morris Avenue, Union, NJ 07083
104 Orange Street, Bloomfield, NJ 07003
(All facilities above are covered by License Number 29-00244-02)

6. Decommissioning activities as used below refer to the activities required by 10 CFR Part 30 for decommissioning of the facilities identified above.

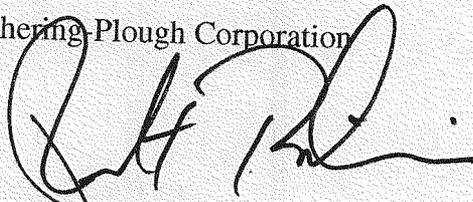

7. For value received from Schering Corporation, and pursuant to the guarantor's authority to enter into this guarantee, the guarantor guarantees to the NRC that if the licensee fails to perform the required decommissioning activities, as required by License No. 29-00244-02, the guarantor shall
 - (a) carry-out the required activities, or
 - (b) set-up a trust fund in favor of the above identified beneficiary in the amount of the current cost estimates for these activities.
8. The guarantor agrees to submit revised financial statements, financial test data, and an auditor's special report and reconciling schedule annually within 90 days of the close of the parent guarantor's fiscal year.
9. The guarantor agrees that if, at the end of any fiscal year before termination of this guarantee, it fails to meet the financial test criteria, the licensee shall send within 90 days of the end of the fiscal year, by certified mail, notice to the NRC that the licensee intends to provide alternative financial assurance as specified in 10 CFR Part 30. Within 120 days after the end of the fiscal year, the guarantor shall establish such financial assurance if the Schering Corporation has not done so.
10. The guarantor also agrees to notify the beneficiary promptly if the ownership of the licensee or the parent firm is transferred and to maintain this guarantee until the new parent firm or the licensee provides alternative financial assurance acceptable to the beneficiary.
11. The guarantor agrees that if it determines, at any time other than as described in Recital 9, that it no longer meets the financial test criteria or it is disallowed from continuing as a guarantor, it shall establish alternative financial assurance as specified in 10 CFR Part 30, 40, 70, or 72, as applicable, within 30 days, in the name of Schering Corporation unless Schering Corporation has done so.
12. The guarantor as well as its successors and assigns agree to remain bound jointly and severally under this guarantee notwithstanding any or all of the following: amendment or modification of license or NRC-approved decommissioning funding plan for that facility, the extension or reduction of the time of performance of required activities, or any other modification or alteration of an obligation of the licensee pursuant to 10 CFR Part 30.
13. The guarantor agrees that all bound parties shall be jointly and severally liable for all litigation costs incurred by the beneficiary, NRC, in any successful effort to enforce the agreement against the guarantor.

14. The guarantor agrees to remain bound under this guarantee for as long as Schering Corporation must comply with the applicable financial assurance requirements of 10 CFR Part 30, for the previously listed facilities, except that the guarantor may cancel this guarantee by sending notice by certified mail to the NRC and to Schering Corporation, such cancellation to become effective no earlier than 120 days after receipt of such notice by both the NRC and Schering Corporation as evidenced by the return receipts.
15. The guarantor agrees that if Schering Corporation fails to provide alternative financial assurance as specified in 10 CFR Part 30, as applicable, and obtain written approval of such assurance from the NRC within 90 days after a notice of cancellation by the guarantor is received by both the NRC and Schering Corporation from the guarantor, the guarantor shall provide such alternative financial assurance in the name of Schering Corporation or make full payment under the guarantee.
16. The guarantor expressly waives notice of acceptance of this guarantee by the NRC or by Schering Corporation. The guarantor also expressly waives notice of amendments or modifications of the decommissioning requirements and of amendments or modifications of the license.
17. If the guarantor files financial reports with the U.S. Securities and Exchange Commission, then it shall promptly submit them to the NRC during each year in which this guarantee is in effect.

I hereby certify that this guarantee is true and correct to the best of my knowledge.

Re: NRC Broad Scope Byproduct Material License No. 29-00244-02
Decommissioning Funding Plan

Dear Sir:

I am the chief executive officer of Schering-Plough Corporation, 2000 Galloping Hill Road, Kenilworth, New Jersey 07033. This letter is in support of this firm's use of the financial test to demonstrate financial assurance, as specified in 10 CFR Part 30.

I hereby certify that Schering-Plough Corporation is currently a going concern, and that it possesses positive tangible net worth in the amount of \$1,597,000,000 as of December 31, 2008.

This firm is required to file a Form 10K with the U.S. Securities and Exchange Commission for the latest fiscal year. This fiscal year of this firm ends of December 31.

I hereby certify that the content of this letter is true and correct to the best of my knowledge.

Fred Hassan
Chairman and Chief Executive Officer

Re: Schering Corporation, License No. 29-00244-02

Dear Sirs:

I am the Chief Financial Officer of Schering-Plough Corporation. This letter is in support of this firm's use of the financial test to demonstrate financial assurance, as specified in 10 CFR Part 30.

This firm guarantees, through the parent company guarantee submitted to demonstrate compliance under 10 CFR Part 30, funding for decommissioning of the following facilities owned or operated by a subsidiary of this firm. The current cost estimates or certified amounts for decommissioning, so guaranteed, are shown for each facility:

<u>Name of Facility</u>	<u>Location of Facility</u>	<u>Current Cost Estimates</u>
Schering Corporation License No. 29-00244-02	2000 & 2015 Galloping Hill Rd Kenilworth, NJ 07033-0530	\$691,518
Schering Corporation	144 Route 94 P.O. Box 32 Lafayette, NJ 07848	\$ 38,928
Schering Corporation	556 Morris Avenue Summit, NJ 07901	\$ 17,672
Schering Corporation	1011 Morris Avenue Union, NJ 07083-7197	\$ 12,659
Schering Corporation	104 Orange Street Bloomfield, NJ 07033	\$ 14,022

This firm is required to file a Form 10K with the U.S. Securities and Exchange Commission for the latest fiscal year.

The fiscal year of this firm ends on December 31. The figures for the following items marked with an asterisk are derived from this firm's independently audited, year-end financial statements and footnotes for the latest completed fiscal year, ended December 31, 2008.

Parent Company Guarantee Financial Test II

1. Current decommissioning cost estimates or certified amounts
 - a. Decommissioning amounts covered by this parent company guarantee \$ 774,799
 - b. All decommissioning amounts covered by other NRC or Agreement State parent company guarantees or self-guarantees \$ 0
 - c. All amounts covered by parent company guarantees, self-guarantees, or financial tests of other Federal or State agencies (e.g., EPA) \$ 18,101,814

TOTAL \$ 18,876,613

2. Current bond rating of most recent unsecured issuance of this firm

Senior unsecured debt rating	A-/S&P
Short-term corporate credit and commercial paper rating.....	A-2/S&P
Senior unsecured credit rating.....	Baa1/Moody's
Commercial paper rating.....	P-2/Moody's

3. Date of issuance of bond:

€500 million aggregate principal amount of 5.0 percent senior unsecured notes.....	October 1, 2007
€1,500 million aggregate principal amount of 5.375 percent senior unsecured notes.....	October 1, 2007

4. Date of maturity of bond:

€500 million aggregate principal amount of 5.0 percent senior unsecured notes.....	2010
€1,500 million aggregate principal amount of 5.375 percent senior unsecured notes.....	2014

- *5. Tangible net worth** (if any portion of estimates for decommissioning is included in total liabilities on your firm's financial statements, you may add the amount of that portion to this line)..... \$1,597,000,000

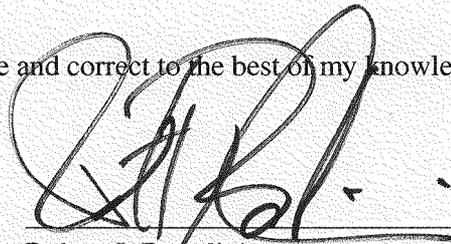

- *6. Total assets in the U.S. (required only if less than 90% of assets are located in the U.S.)..... \$9,178,091,520

- 7. Is line 5 at least \$10 million?..... Yes
- 8. Is line 5 at least 6 times line 1?..... Yes
- *9. Are at least 90% of assets located in the U.S.? (If not, complete line 10)..... No
- 10. Is line 6 at least 6 times line 1?..... Yes
- 11. Is the rating specified on line 2 BBB or better (if issued by Standard & Poor's) or Baa or better (if issued by Moody's)? Yes

* Denotes figures derived from financial statements.

** Tangible net worth is defined as net worth minus goodwill, patents, trademarks, and copyrights.

I hereby certify that the content of this letter is true and correct to the best of my knowledge.

INDEPENDENT ACCOUNTANTS' REPORT ON APPLYING AGREED-UPON PROCEDURES

Schering-Plough Corporation
2000 Galloping Hill Road
Kenilworth, NJ 07033-0530

We have performed the procedures included in the Code of Federal Regulations (CFR) Title 10, Chapter 1, Part 30, which are specified by the U.S. Nuclear Regulatory Commission solely to assist Schering-Plough Corporation and subsidiaries (the "Company") and the U.S. Nuclear Regulatory Commission in evaluating the Company's compliance with the financial test option as of December 31, 2008, included in the accompanying letter dated March 24, 2009 from Mr. Robert J. Bertolini, Executive Vice President and Chief Financial Officer of the Company. Management is responsible for the Company's compliance with those requirements. This agreed-upon procedures engagement was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants, as adopted by the Public Company Accounting Oversight Board (PCAOB). The sufficiency of these procedures is solely the responsibility of the parties specified in this report. Consequently, we make no representation regarding the sufficiency of the procedures described below either for the purpose for which this report has been requested or for any other purpose.

The procedures that we performed and related findings are as follows:

- a. We compared the amounts included in items 5, 6, and 9 under the caption Financial Parent Company Guarantee Financial Test II in the letter referred to above to the respective amounts included in a schedule prepared by the Company.
- b. We compared the amounts per the schedule that were used in determining the information included in items 5, 6, and 9 to the audited consolidated financial statements of the Company as of and for the year ended December 31, 2008, on which we have issued our report dated February 27, 2009 (which report expresses an unqualified opinion and includes an explanatory paragraph regarding the Company's adoption of Statement of Financial Accounting Standards No. 158, *Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans*, and Financial Accounting Standards Board Interpretation No. 48, *Accounting for Uncertainty in Income Taxes*), and noted that such amounts were in agreement.
- c. We recomputed the amounts per the schedule and noted no exceptions.

We were not engaged to, and did not, perform an examination, the objective of which would be the expression of an opinion on the accompanying letter dated March 24, 2009. Accordingly, we

do not express such an opinion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you.

This report is intended solely for the information and use of the board of directors and management of the Company and the specified parties listed in the first paragraph, and is not intended to be and should not be used by anyone other than these specified parties.

Deloitte & Touche LLP

Revised Decommissioning Funding Plan
(Radiological Decommissioning Cost Estimate)
Schering Corporation
Kenilworth, NJ
NRC Material License No. 29-00244-02
March 1999
(Revised April 2001)
(Revised February 2005)
(Revised March 2008)

Introduction to March 2008 Revision

This March 2008 revision updates the Decommissioning Funding Plan last revised in February 2005.

The 2005 unit costs were adjusted to current (2008) costs when actual costs were available. If actual current unit costs were not available, the 2005 unit costs were adjusted to 2008 using an inflation figure of 8.0% over the 3-year period 2005-2008.

(Reference: US U.S. Department of Labor, Bureau of Labor Statistics, Consumer Price Indexes, <http://data.bls.gov/cgi-bin/cpiccalc.pl>)

The site at 556 Morris Avenue, Summit, NJ which was added to the NRC license in September 2003 has been in use for R&D work for several years. Currently, only a single room (and only a single bench in that room) has been used for radioactive work. Only C-14 in small amounts has been used in this room. Thus, the projected decommissioning efforts at the Summit site include only minor survey efforts.

The site at 1011 Morris Avenue, Union, NJ has had no storage or use of radioactive materials since the last DFP revision.

The biological incinerator located in building K-15 at the Kenilworth site has been decommissioned and completely removed. It will not be replaced. A final status survey has been done and the location has been released for unrestricted use. No additional decommissioning effort is planned.

In general, the use of radioactive materials has decreased during the past three years. No additional major facilities have been added in the past three years.

The state of New Jersey intends to apply for an agreement with the US Nuclear Regulatory Commission to become an Agreement State. Agreement State status for NJ is anticipated in 2009. Since NJ is required to adopt essentially equivalent regulations, we do not anticipate any substantive changes in decommissioning requirements due to NJ becoming an Agreement State.

Introduction to February 2005 Revision

This February 2005 revision updates the Decommissioning Funding Plan issued April 2001.

This revision incorporates consideration of the site at 556 Morris Avenue, Summit, NJ which was added to the NRC license in September 2003. The numbers of labs and other rooms using radioactive material were adjusted to current figures. Decommissioned rooms were not excluded from consideration since in some cases a final decommissioning survey might also be done in rooms previously decommissioned by the licensee.

The April 2001 unit costs were adjusted to current (February 2005) costs when actual costs were available. If actual current unit costs were not available, the April 2001 unit costs were adjusted to April 2005 using an inflation figure of 9.7% over the 4-year period 2000-2004. (Reference: US U.S. Department of Labor, Bureau of Labor Statistics, Consumer Price Indexes, <http://data.bls.gov/cgi-bin/cpicalc.pl>)

Although decommissioning funding planning applies only to radionuclides with half-lives greater than 120 days, decommissioning efforts for radionuclides with shorter half-lives were not rigorously excluded from this plan. Therefore, this plan will tend to overestimate the cost figure as required by 10 CFR 30.35.

Introduction to April 2001 Revision

In April 2001 the Decommissioning Funding Plan was again revised to take into account changes since the March 1999 revision. This document reflects changes in unit costs and quantity of rooms/areas to survey and decontaminate. Where no other data are available, unit costs are increased by an inflation rate of 4% per year, or 8% since the 1999 revision. It also includes the anticipated expansion of the Kenilworth radiochemistry department which is scheduled to be completed in 2001. Also updated are the numbers of rooms at each site which have permission to use radioactive materials. Decommissioning of a radioactive dose preparation hood was added to the Lafayette site.

Introduction

This revised Decommissioning Funding Plan (DFP) has been prepared in accordance with the Nuclear Regulatory Commission (NRC) regulation 10 CFR 30.35, AFinancial Assurance and Recordkeeping for Decommissioning@, and NRC Regulatory Guide 3.66, "Standard Format and Content of Financial Assurance Mechanisms Required for Decommissioning Under 10 CFR Parts 30, 40, 70, and 72."

Decommissioning is defined by NRC Regulatory Guide 3.66 as Aremoving (as a facility) safely from service and reducing residual radioactivity to a level that permits release of the property for unrestricted use and termination of license.@

This plan provides an analysis and cost estimate for decontamination of all facilities to meet the radiation dose criteria from residual radioactivity of 10 CFR 20 Subpart E, ARadiological Criteria for License Termination@ as published in the Federal Register, 21 July 1997, page 39058-39092. These criteria allow for decommissioning to levels satisfactory for either unrestricted use (see 10 CFR 20.1402) or for restricted use see (see 10 CFR 20.1403). For planning purposes, this decommissioning funding plan assumes all facilities will be decontaminated to levels suitable for unrestricted use.

Schering Plough holds license number 29-00244-02 which authorizes possession and use of byproduct material at five sites located at:

2000 and 2015 Galloping Hill Road, **Kenilworth**, NJ
556 Morris Avenue, **Summit**, NJ (this site added to NRC license in 2003)
Route 94, **Lafayette**, NJ
104 Orange Street (Building 33), **Bloomfield**, NJ
1011 Morris Avenue, **Union**, NJ

This consolidated DFP contains analyses and cost estimates for each of the five sites separately.

This is a revision of the licensee=s Decommissioning Funding Plan dated March 1994. Since 1992, the licensee has moved all of the research operations located in Bloomfield to its facility in Kenilworth. The facility in Bloomfield has been decommissioned and removed from the license, except for a small area known as Building 33 which is now used only for storage and management of containers of radioactive waste.

Technical Basis

Schering's byproduct material license is a Type A specific license of broad scope allowing a wide latitude for possession and use of many different radionuclides. However, Schering's actual possession and use of radionuclides have largely been limited to a small number of specific radionuclides, particularly H-3, C-14, P-32, P-33, S-35, Ca-45 and I-125. Therefore, this Decommissioning Funding Plan is based on known prior use and current experience with byproduct material.

Recent radiological survey data exist and were used to determine the need for decontamination to meet the NRC criteria in 10 CFR 20 Subpart E, ARadiological Criteria for License Termination@. In almost all cases, recent routine contamination surveys show that contemporary radioactive contamination levels are well below 500 dpm/100 cm². The only exception is the Radiochemistry Department in Building K-15 on the Kenilworth site where routine contamination levels inside chemical fume hoods and perhaps ductwork can be substantially higher.

Between 1992 and 1993, the Kenilworth site assumed all of the research operations formerly located in Bloomfield. Therefore, almost all of the radioisotope use in Kenilworth is very recent and is located in the new building known as K-15 A Drug Discovery Building@.

The Kenilworth facility contains a few specialized labs which handle larger amounts of radioactivity than the general purpose labs. These specialized places include the radiochemistry lab (using H-3 and C-14), the radioiodine lab (initially designed for I-125 but now used for H-3 radiochemistry), the radioactive waste processing room and the incinerator. Each of these specialized labs is addressed separately in the decontamination analysis.

The following table summarizes the number of rooms at each site as they exist in early 2005. Since the use of radioactive materials has decreased during the period 2005 to 2008, no additional effort is anticipated related to the number of labs or rooms. It will be assumed for planning purposes that rooms previously decommissioned by the licensee during normal operations will be surveyed again during the final site decommissioning.

Site	Number of Labs or Rooms		
	Currently Authorized	Previously Decommissioned	Total
Kenilworth	240	30	270
Summit	1	0	1
Lafayette	17	10	27
Bloomfield	1	5	6
Union	0	4	4

No credit has been taken for the salvage value of any materials or equipment which would be decontaminated.

Derived Concentration Guideline Levels (DCGLs)

In order to meet the criteria for decommissioning in 10 CFR 20 Subpart E, ARadiological Criteria for License Termination,@ it is necessary to determine the Derived Concentration Guideline Level (DCGL) for each radionuclide. The DCGL is the activity concentration (e.g., dpm/100 cm²) within a survey unit corresponding to the release criterion and is derived from activity/dose relationships through exposure pathway scenarios.

For planning purposes, DCGL is calculated for the longer lived radionuclides H-3 and C-14 using the RESRAD-Build computer code.¹

¹RESRAD-Build: A Computer Model for Analyzing the Radiological Doses Resulting from the Remediation and Occupancy of Buildings Contaminated with Radioactive Material@, Argonne National Laboratory, US Department of Energy, version 2.1.

The assumptions used by the code are that a person spends 1/4 of his time in a 36 m² room where a 36 m² uniform contamination exists on the floor. The outside air exchange rate is 0.8 h⁻¹ and half of the contamination is removed over a 365 day period. The fraction released to air is 0.1 and the ingestion rate of the person in the room is 1e-07 h⁻¹. Under these conditions, the surface contamination level to give a person 25 mrem during the year is as follows:

Radionuclide	Surface Concentration to Give 25 mrem in a year. dpm/100 cm ²	Surface Concentration to Give 2.5 mrem in a year. (ALARA target) dpm/100 cm ²
H-3	440,000,000	44,000,000
C-14	12,500,000	1,250,000

For planning purposes, it is assumed that the ALARA requirement found in 10 CFR 20.1402 will reduce the radiation dose from 25 mrem to 2.5 mrem, a factor of 10 ALARA dose reduction. The surface concentrations to give 2.5 mrem in a year are also given in the above table.

A decontamination target level of 1,000,000 dpm/100cm² is chosen for planning purposes. That is, any survey unit where the average surface concentration of C-14 plus H-3 is below 1,000,000 dpm/100cm² will be assumed to meet both the 25 mrem/y criteria for unrestricted use and the ALARA requirement.

Projected Scope of Decontamination

Based on current operational surveys information and site histories, it is projected that little or no radiological decontamination will be needed at the licensee's existing sites to meet the decontamination target level of 1,000,000 dpm/100 cm². Limited ALARA-based decontamination may be applied in selected rooms such as the radiochemistry area in building K-15 in Kenilworth. Costs for the characterization/final radiological surveys are included.

Unit Cost Estimates

Estimates of decommissioning costs are based on unit costs in current (2008) dollars. Table 1 lists unit costs used for estimating specific decommissioning costs.

Table 1
Unit Costs for Estimating Decommissioning Costs

Operation or Job Function	Unit Cost (2008 dollars)	Units
Waste disposal (licensed radioactive waste broker to pick up containers, pay all fees and surcharges, and ship drum to low level waste disposal site or waste processor.)	\$6.75	per pound
Waste disposal (licensed radioactive waste broker to pick up containers, pay all fees and surcharges, and ship drum to low level waste disposal site or waste processor.) Cost for large size items.	\$7.83	per pound
Waste disposal by Metal Melting. Metal melting fee includes all shipping, melting and disposal costs.	\$7.83	per pound
Laboratory analysis of swipe for contamination using liquid scintillation analysis for beta activity. Cost per radiological analysis performed on site, based on cost of liquid scintillation solution and vial.	\$0.52	per analysis
Certified Health Physicist	\$2,000.00	per day
Site Decommissioning Manager	\$1,155.14	per day
Health Physics Technician	\$829.33	per day
Clerical Worker	\$385.05	per day
Weight of a 6-foot metal fume hood	500	lbs/hood
Weight of metal duct	6.5	lbs/foot

**Means for Adjusting the Cost Estimate and Associated Funding Level
over the Life of the Facility**

At least once in every three years the licensee will review this DFP to determine if the cost estimate requires adjustment. The review will include evaluation of unit costs used in determining decommissioning costs. These unit costs include but are not limited to:

- Labor rates (\$/hr)
- Radioactive waste disposal rates (\$/lb or \$/container)

The review will also evaluate whether the extent of areas and items projected to require decontamination has increased or decreased.

Any changes in NRC regulations affecting residual radioactivity levels suitable for release for unrestricted use will be evaluated for an effect on the cost estimate.

Summary of Decommissioning Cost Estimates

A summary of the total cost per site, and for the five sites combined, is given in Table 2. Decommissioning costs are estimated separately for each site using cost estimating worksheets derived from guidance in NRC Regulatory Guide 3.66. Note that a contingency adjustment of +25% has been included in each cost analysis.

Table 2
Summary of Decommissioning Costs at Each Site, and for All Sites Combined

Facility	Decommissioning Cost Estimate
Kenilworth	\$691,518
Summit	\$17,672
Lafayette	\$38,928
Bloomfield	\$14,022
Union	\$12,659
Total for all sites:	\$774,799

Kenilworth Site

The Kenilworth site has approximately 240 general purpose approved radioisotope use areas where NRC licensed radioactive materials are stored and/or used. In addition, there are several special purpose areas where larger amounts of radioactive materials are used. These are the radiochemistry labs (using H-3 and C-14), the radioiodine lab (designed for using I-125 but now used for H-3 radiochemistry), radioactive waste processing rooms, and the incinerator.

The characterization survey will precede the decontamination. Following decontamination, the areas which were decontaminated will be resurveyed, and if necessary decontaminated again. The final survey will consist of survey data generated during the characterization survey and the resurveys of decontaminated areas.

There are currently (2008) approximately 240 labs or rooms which are authorized to use radioactive material. In addition about 30 labs have been decommissioned by the licensee as part of routine operations. Therefore, the characterization survey will consist of radiological surveys of approximately $240 + 30 = 270$ labs and radioisotope use areas where radioactivity had been used or authorized to be used, and spot checks of adjacent areas such as corridors and offices. It is estimated that a 3-person team can survey 8 labs per day. The 3-person survey team would survey the special purpose areas mentioned above, and 20% of the labs where radioactive materials were never used (unaffected areas), about 100 labs. Thus, the 3-person team would need about 46 days to survey the approximately 370 labs. The time to prepare the samples and load the liquid scintillation analyzer is included in the survey time. An additional 25 person-days are allocated for data management.

The Radiochemistry Lab is located at the Kenilworth site in Building K15, A Block, 4th floor, with approximately 2700 square feet (270 m²) of lab space, with adjoining offices separated by walls and doors. The radiochemistry lab rooms are under negative pressure with respect to adjoining rooms and corridors. Floors are of an impermeable material without seams.

There will be 20 hoods in the radiochemistry area (including the iodination room which is now used for tritium work), sufficient for each radiochemist to be able to conduct work with millicurie quantities in a hood. Although future contamination levels will be determined by actual surveys, for planning purposes these radiochemistry hoods and ducts are assumed to be contaminated at levels requiring remediation. The total estimated amount of exhaust ducts considered for remediation is 350 linear feet, up from 250 linear feet as estimated in year 2001.

The radioactive waste processing rooms contain equipment for compacting dry waste in 55 gallon drums, a crusher for crushing glass and plastic vials containing spent liquid scintillation solution, and a sink for disposing of liquid radioactive materials

into the sewer. The vial crusher is not currently used but may be contaminated. The area of the radioactive waste processing room is approximately 80 m². A small exhaust duct is connected to the vial crusher and the solid waste compactor. The floor is epoxy painted concrete.

Of the 270 general radioisotope use labs and the special use areas, none are expected to have any contamination above the target level of 1,000,000 dpm/100 cm². This analysis is based on routine lab surveys conducted by the Radiation Safety Office.

The facility had a small incinerator which had been used regularly (less than 1 batch per month) to incinerate radioactive waste. This incinerator has been completely decommissioned and removed from the site. A final status survey was done and the area was released for unrestricted use. No further decommissioning effort is anticipated.

The decommissioning analysis and cost estimate shown in Table 3 below cover all labs and areas where NRC licensed material is stored and/or used on the Kenilworth site. The format used is based on Appendix F, Cost Estimating Tables, A Standard Format and Content of Financial Assurance Mechanisms Required for Decommissioning Under 10 CFR Parts, 30, 40, 70, and 72. @ US NRC Regulatory Guide 3.66, June 1990.

Table 3
Decommissioning Cost Analysis -Kenilworth Site

Schering Corporation, Kenilworth Site 2000 and 2015 Galloping Hill Road, Kenilworth, NJ	Units	Unit Rate (\$/unit)	Cost Mar-08 (\$)
1 Planning and Preparation.			
1.1 Preparation of documentation for regulatory agencies, including decommissioning plan when required by 10 CFR 30.36(c)(2), and development of work plans. This also includes time to categorize radioactive waste as to its chemical and radiological characteristics and determine proper methods of disposal.			
1.1.1 Certified Health Physicist, 10 days	10	2,000.00	\$20,000
1.1.2 Site Decommissioning Manager, 5 days	5	1,155.14	\$5,776
1.1.3 Clerical, 5 days	5	385.05	\$1,925
1.2 Radiological characterization survey.			
1.2.1 Certified Health Physicist, 10 days	10	2,000.00	\$20,000
1.2.2 Site Decommissioning Manager, 46 days	46	1,155.14	\$53,136
1.2.3 Health Physics Technicians, 3 for 46 days	138	829.33	\$114,448
1.2.4 Health Physics Technician, 25 days (data management)	25	829.33	\$20,733
1.2.5 Sample Analysis Technician	25	829.33	\$20,733
1.2.6 Analysis of 20,000 wipe samples	20000	0.52	\$10,426
2 Decontamination and/or Dismantling of Facility Components.			
2.1 Radiological cleaning of minor surface contamination from small areas of benches, hoods, floors, shelving, etc. from general purpose labs.			
2.1.1 Site Decommissioning Manager, 10 days	10	1,155.14	\$11,551
2.1.3 Health Physics Technician, 30 person-days	30	829.33	\$24,880
2.2 Removal and preparation for disposal of approximately 350 linear feet of potentially contaminated exhaust ducts. Duct will be cut into pieces and will be flattened on site, but mechanical compaction or supercompaction is not anticipated.			
2.2.1 Certified Health Physicist, 1 days	2	2,000.00	\$4,000
2.1.1 Site Decommissioning Manager, 10 days	15	1,155.14	\$17,327
2.2.3 Health Physics Technician, 20 person-days	30	829.33	\$24,880
2.4 Dismantle and package 20 fume hoods for metal melting.			
2.4.1 Certified Health Physicist, 1 days	2	2,000.00	\$4,000
2.1.1 Site Decommissioning Manager, 5 days	10	1,155.14	\$11,551
2.4.3 Health Physics Technician, 10 days	20	829.33	\$16,587
2.5 Remove 80 m2 of floors of radiochemistry lab.			
2.5.1 Certified Health Physicist, 1 days	1	2,000.00	\$2,000
2.5.2 Site Decommissioning Manager, 5 days	5	1,155.14	\$5,776
2.5.3 Health Physics Technician, 10 person-days	10	829.33	\$8,293
3 Shipping and Disposal of Radioactive Wastes.			
3.1 Radwaste contractor to provide containers for the radioactive waste, manifest it and ship it to a low level radioactive waste disposal site or waste management facility. Waste includes material			

decontaminated and contaminated cleaning supplies.			
3.1.1 General purpose lab cleaning, 2000 lbs	2000	7.83	\$15,660
3.1.3 Ductwork metal melting, 350 feet, 6.5 lbs/foot, 2275 lbs	2275	7.83	\$17,813
3.1.4 Hood metal melt, 20 hoods, 500 lbs/hood	10000	7.83	\$78,300
3.1.5 Disposal of flooring, 80 m ² x 0.0025 m x3 = 0.6 m ³ = 2660 lbs	2660	7.83	\$20,828
4 Restoration of Contaminated Areas on Facility Grounds. None anticipated.			\$0
5 Final Radiation Survey.			
5.1 Certified Health Physicist, 4 days	4	2,000.00	\$8,000
5.2 Site Decommissioning Manager, 5 days	5	1,155.14	\$5,776
5.3 Health Physics Technician, 10 days	10	829.33	\$8,293
5.4 Analysis of 1000 wipe samples	1000	0.52	\$521
6 Site Stabilization, Long-Term Surveillance (if applicable). None anticipated.			\$0
Sub Total			\$553,215
7 Contingency, 25%	na	na	\$138,304
Total Site Cost:			\$691,518

Summit Site

In July 2000 Schering Plough announced that it has signed a definitive agreement with Novartis Pharmaceuticals Corporation to purchase Novartis' research and office facility located in Summit, N.J. The research and development, laboratory and office complex totals approximately 2 million square feet located on an 88-acre campus at the intersection of Morris Avenue and River Road in Summit. The site has been occupied for R&D, laboratory and pharmaceutical manufacturing uses since 1937, most recently by Novartis since the 1997 merger between Ciba-Geigy Corporation and Sandoz Corporation, and by Ciba-Geigy prior to that. Schering-Plough purchased the Summit site from Novartis Pharmaceuticals Corporation in November 2000, with Novartis vacating the site as of April 2003.

Schering added the summit site to its NRC license in September 2003. Although some Schering non-radioactive research activities have been moved to the Summit site, no radioactivity had been received, stored or used there by Schering as of February 2005. As of March 2008 only a single room (and only a single bench in that room) has been used for radioactive work. Only C-14 in small amounts has been used in this room. With such modest usage of radioactivity, and considering prior experience at Schering, no required decontamination is anticipated for the Summit site. Thus, the projected decommissioning efforts at the Summit site include only minor survey and documentation efforts.

Table 4
Decommissioning Cost Analysis - Summit Site

Schering Corporation, Summit Site 556 Morris Avenue, Summit, NJ	Units	Unit Rate (\$/unit)	Cost Mar-08 (\$)
1 Planning and Preparation.			
1.1 Preparation of documentation for regulatory agencies, including decommissioning plan when required by 10 CFR 30.36(c)(2), and development of work plans. 4 Restoration of Contaminated Areas on Facility Grounds. None anticipated.	na		\$0
5 Final Radiation Survey. Use Characterization Survey as Final Survey	na		\$0
6 Site Stabilization, Long-Term Surveillance (if applicable). None anticipated.	na		\$0
Sub Total			\$14,138
7 Contingency, 25%	na	na	\$3,534
Total Site Cost:			\$17,672

Lafayette Site

The Lafayette, NJ site has 17 rooms where byproduct materials are currently (2008) stored and/or used. In addition, approximately 10 lab rooms were decommissioned by the licensee during normal operations. Recent contamination survey data indicate that routine contamination levels are maintained well below 500 dpm/100 cm². Therefore, it is anticipated that a site characterization survey would be done which will become the final decommissioning survey.

A single small hood in Building 6 is used for dose preparation with C-14 or H-3. Although future contamination levels will be determined by actual surveys, for planning purposes this hood is assumed to be contaminated at levels requiring remediation. Costs for decommissioning and disposal of this hood are included. No other decontamination is anticipated.

The following cost estimating evaluation covers all storage and use areas for NRC licensed materials at the Lafayette site.

Table 5
Decommissioning Cost Analysis - Lafayette Site

	Total Site Cost:			\$38,928

Bloomfield Site

The Bloomfield site, consisting of only Building 33, is currently used only for storage and management of containers of radioactive waste in a single indoor dedicated location. In the past, about 5 labs had used radioactive material in Building 33, but the labs have been decommissioned by the licensee in its normal operations. All lab furniture and equipment and even walls have been removed. The remaining floor area where the labs used to be could be surveyed as part of the final decommissioning survey.

Routine contamination surveys show little or no radioactive contamination. No decontamination is anticipated.

Sub Total			\$11,217
7 Contingency, 25%	na	na	\$2,804
Total Site Cost:			\$14,022

Union Site

The Union, NJ site has only 3 labs and one storage area where byproduct materials are or were used and/or stored. This total of four rooms includes rooms which were decommissioned by the licensee as part of normal operations. Historical contamination survey data indicate that routine contamination levels are maintained below 500 dpm/100 cm². Therefore, only a limited site characterization survey which will become the final decommissioning survey is anticipated.

No decontamination is anticipated. The Union site has had no storage or use of radioactive materials between the last DFP revision in 2005 and now.

The following cost estimating evaluation covers all storage and use areas for NRC licensed materials at the Union site.
