Mail Stop T8-E24
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Dear Ms. McIntosh:

This letter is submitted in response to an information request received from the Nuclear Regulatory Commission, dated January 16, 2009. As a result of the request, Goodrich Corporation and its subsidiaries (collectively "Goodrich") conducted a survey of their U.S. sites to determine which have tritium exit signs and to verify that the signs are in good working condition and managed according to 10 C.F.R. 31.5. Each site conducted a physical inventory, as well as a review of available purchasing records.

At this time, nine Goodrich locations utilize a total of 91 tritium exit signs. The signs are in good working order. One of the nine sites is in the process of returning its three signs, which are undamaged, to the manufacturer and understands the appropriate return process. The sites are located in the states of Arizona, California, Colorado, Kentucky, Ohio and Vermont. A tenth site recently returned its two signs to the manufacturer, Shield Source, Inc., in accordance with regulatory requirements and no longer has possession of any tritium exit signs. The nine sites with signs are aware of the NRC requirements regarding tritium exit signs and have processes in place for compliance with NRC regulations.

This response is based on currently available information and to the best of my knowledge is accurate in all material respects. Please direct any questions regarding this response to my attention.

Sincerely,

A handwritten signature in black ink, appearing to read "Dennis M. Hussey", with a long, sweeping horizontal line extending to the right.

Dennis M. Hussey, Ph.D., CIH, CCMM
