and Environmental Management Programs
Attention: Angela R. McIntosh, Mail Stop T8-E24
U.S. Nuclear Regulatory Commission
Washington, DC 20555

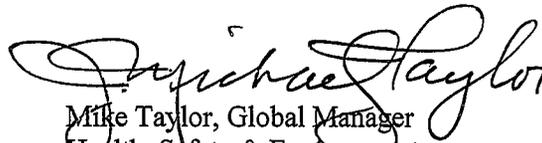

Dear Ms. McIntosh:

Re: Extension to Demand for Information and Reporting Damaged Devices Containing
Radioactive Material

This letter is a follow up to your e-mail received today granting a 60-day extension for response to the NRC demand to perform a tritium exit sign inventory. You requested that we respond in a formal letter.

We agreed that we would respond via a survey method by May 16, 2009. If we find that more than five percent of the signs cannot be accounted for, we will conduct a full physical inventory and will forward that result by Jul 15, 2009 (another 60 days).

Sincerely,

Mike Taylor, Global Manager
Health, Safety & Environment

cc: Paul Rytting, Director
