**Subject:** Request for Additional Information Concerning Survey Methodology  
**Attachments:** Tritium Survey Methodology.pdf

Dear Mr. Taylor: NRC has reviewed LDS's survey methodology (attached) for responding to our Demand for Information concerning the performance of an inventory of your tritium exit signs. We believe your methodology is sound. Hopefully, your survey results will indicate little to no losses of signs; however, it is possible that the survey results will indicate that a large number of signs are missing.

Therefore, prior to our granting approval of your extension request, NRC needs to know at what level of losses of signs would LDS abandon the survey approach as your method for response, and conduct a full physical inventory instead. Please let me know if you have any questions with regard to this.

Sincerely,

*Angela R. McIntosh*
