King of Prussia, PA 19406-1415

Safety Manager,

I am writing to request a change in our License No. 06-16699-01, Docket No. 030-11491 to a "possession and storage only until termination of the license" type.

We are no longer performing principal activities under this license and will not use these sources for any other purpose. Back in August of 2007 we had most of our sources removed from our facility by Los Alamos National Laboratories. Below is a list of the sources we have remaining. These were not removed, at that time, because the sources were unknown to the manufacturer, model numbers were not visible and some were saved for possible use if we were to distribute gauges again.

Since these sources are greater than class C waste I have found no local companies interested in disposal of this material at this time. We will continue to take all actions, within our ability, to dispose of this material and will notify the NRC within 30 days of disposal.

I have just completed a physical inventory of all the sources on hand. This is what I observed :

- 2 - 100 mci AMC-66 style sealed source in a X-11 capsule (I believe they are now referred to as Amersham Model CTC-D2 or DuPont Merck Model NER-478C)
- 2 - TG601 probes containing 100 mci AMC-66 style sources
