CDR WORKING PAPER FOR PLANNING PURPOSES ONLY

This ERCOT Working Paper has been prepared for specific ERCOT and market participant purposes and has been developed from data provided by ERCOT market participants. The data may contain errors or become obsolete and thereby affect the conclusions and opinions of the Working Paper. ERCOT MAKES NO WARRANTY, EXPRESS OR IMPLIED, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, AND DISCLAIMS ANY AND ALL LIABILITY WITH RESPECT TO THE ACCURACY OF SAME OR THE FITNESS OR APPROPRIATENESS OF SAME FOR ANY PARTICULAR USE. THIS ERCOT WORKING PAPER IS SUPPLIED WITH ALL FAULTS. The specific suitability for any use of the Working Paper and its accuracy should be confirmed by each ERCOT market participant that contributed data for this Working Paper.

This Working Paper is based on data submitted by ERCOT market participants as part of their Annual Load Data Request (ALDR) and their generation asset registration and on data in the EIA-411. As such, this data is updated on an ongoing basis, which means that this report can be rendered obsolete without notice.

Definitions

Available Mothballed Generation

The probability that a mothballed unit will return to service, as provided by its owner, multiplied by the capacity of the unit. Return probabilities are considered protected information under the ERCOT Protocols and therefore are not included in this report.

BULs

Balancing up load. Loads capable of reducing the need for electrical energy when providing Balancing Up Load Energy Service as described in the ERCOT Protocols, Section 6, Ancillary Services. BULs are not considered resources as defined by the ERCOT Protocols.

Effective Load-Carrying Capability (ELCC) of Wind Generation

The amount of wind generation that the Generation Adequacy Task Force (GATF) has recommended to be included in the CDR. The value is 8.7% of the nameplate capacity listed in the Unit Capacities tables, both installed capacity and planned capacity.

LaaRs (Loads acting as resources)

Load capable of reducing or increasing the need for electrical energy or providing Ancillary Services to the ERCOT System, as described in the ERCOT Protocols, Section 6, Ancillary Services. These Resources may provide the following Ancillary Services: Responsive Reserve Service, Non-Spinning Reserve Service, Replacement Reserve Service, and Regulation Service. The Resources must be registered and qualified by ERCOT and will be scheduled by a Qualified Scheduling Entity

Mothballed Capacity

The difference in the available mothballed generation (see definition above) and the total mothballed capacity. For summer 2007 this value is zero in the CDR Report because of the fact that there isn't time to return those units before the start of the summer.

Mothballed Unit

A generation resource for which a generation entity has submitted a Notification of Suspension of Operations, for which ERCOT has declined to execute an RMR agreement, and for which the generation entity has not announced retirement of the generation resource.

Net Dependable Capability

Maximum sustainable capability of a generation resource as demonstrated by performance testing

Non-Synchronous Tie

Any non-synchronous transmission interconnection between ERCOT and non-ERCOT electric power systems

Other Potential Resources

Capacity resources that include one of the following:

- Remaining "mothballed" capacity not included as resources in the reserve margin
- Remaining DC tie capacity not included as resources in the reserve margin calculation,
- New generating units that have initiated full transmission interconnection studies through the ERCOT generation interconnection process (Note that new wind generating units would be included based on the appropriate discounted capacity value applied to existing wind generating units.)

Planned Units in Full Interconnection Study Phase

To connect new generation to the ERCOT grid, a generation developer must go through a set procedure. The first step is a high-level screening study to determine the effects of adding the new generation on the transmission system. The second step is the full interconnection study. These are detailed studies done by the transmission owners to determine the effects of the addition of new generation on the transmission system.

Private Networks

An electric network connected to the ERCOT transmission grid that contains load that is not directly metered by ERCOT (i.e., load that is typically netted with internal generation).

Reliability Must-Run (RMR) Unit

A generation resource unit operated under the terms of an agreement with ERCOT that would not otherwise be operated except that they are necessary to provide voltage support, stability or management of localized transmission constraints under first contingency criteria.

Signed IA (Interconnection Agreement)

An agreement that sets forth requirements for physical connection between an eligible transmission service customer and a transmission or distribution service provider

Switchable Unit

A generation resource that can be connected to either the ERCOT transmission grid or a grid outside the ERCOT Region.

Changes from 2007 CDR (December Update)

1. The new ERCOT 2008 Load Forecast was used in this report.
2. Loads Acting as Resources (LAAR) are slightly lower than the 2007 Report based on lower average LAAR bids into the ancillary services market.
3. A new line item in the summary tables under Firm Load Forecast was added. "Energy Efficiency Programs (per HB3693)" shows the amount of demand that will be supplanted by energy conservation efforts as reported to the PUCT by ERCOT member utilities.
4. Installed capacity shows an overall decrease of 170 MW due primarily to small changes to the ratings of several units as a result of seasonal testing.
5. The capacity from private networks, which was reported to ERCOT by the owners of those resources, was decreased by 158 MW in total.
6. The Effective Load Carrying Capability (ELCC) of Wind Generation shows a decrease of 17 MW (equivalent nameplate capacity of 195 MW) because the amounts previously reported were anticipating the commercial operation of some units that have since been delayed.
7. The reduction of 36 MW of Reliability Must Run (RMR) is due to re-ratings of the Laredo units and their exit from RMR status is reflected beyond 2008 due to the construction of Laredo Units 4 and 5.
8. The in-service date for Oak Grove 1 was reported as July 14, 2009, for this year's CDR. Therefore, this plant is shown in service in time for the summer peak of 2009 instead of 2010 shown on previous reports.
9. The following units have completed interconnection agreements and/or air permits since the previous CDR:

Unit Name	MW	In-Service by:	Technology	Owner
Sth Houston Green Power Expnsn	244	Summer 2008	Gas - CC	BP Global Power
Laredo Peaking Unit 4	96	Summer 2009	Gas - CT	Topaz Power Group
Laredo Peaking Unit 5	97	Summer 2009	Gas - CT	Topaz Power Group
Victoria Power Station	332	Summer 2008	Gas - CC	NuCoastal Power Corp
Cedar Bayou 4	544	Summer 2009	Gas - CC	NRG Energy, Inc
Winchester Power Park	178	Summer 2009	Gas - CT	LCRA

Long-Term Projections

Summer Fuel Types - ERCOT

Fuel type is based on the primary fuel. The total capacities of the mothballed units are included. Capacities of the wind units are included at 8.7%. The amounts available for the grid according to information from the owners of the private network (self-serve) units and the distributed generation units that have registered with ERCOT are included. Non-synchronous ties are included at 50% rated capacity.

Fuel Type	In MW					
	2008	2009	2010	2011	2012	2013

Summer Coincident Demand by County

The summer coincident demands by county were estimated by using the forecasted non-coincident loads from the 2008 Annual Load Data Requests (ALDR) to determine a proportion of the total for each county for each year and then applying those proportions to

Summer Generation by County

These values are used in the summer import/export calculations for each county. Capacities for mothballed units are included as the total capacity of the unit. Capacities for the wind units are at 8.7%. Non-synchronous ties are shown at 50%. These values include the amount available for the grid according information from the owners of the private network units and the distributed generation units that have registered with ERCOT.

Summer Import/Export by County

Import: The county has less generation than load and must import generation.

Export: The county has more generation than load and is able to export generation.

This data is presented for example only. It is a calculation of the generation in the county less the non-coincident load in the county. The true values will depend on actual load levels and actual generation dispatch.

Winter Coincident Demand by County

The winter coincident demands by county were estimated by using the forecasted non-coincident loads from the 2008 ALDRs to determine a proportion of the total for each county for each year and then applying those proportions to the forecasted ERCOT peak demand.

County	Winter Coincident Demand, MW					
	2008/09	2009/10	2010/11	2011/12	2012/13	2013/14

Winter Generation by County

These values are used in the summer import/export calculations for each county. Capacities for mothballed units are included as the total capacity of the unit. Capacities for the wind units are at 8.7%. Non-synchronous ties are shown at 50%. These values include the amount available for the grid according information from the owners of the private network units and the distributed generation units that have registered with ERCOT.

Winter Import/Export by County

Import: The county has less generation than load and must import generation.

Export: The county has more generation than load and is able to export generation.

This data is presented for example only. It is a calculation of the generation in the county less the non-coincident load in the county. The true values will depend on actual load levels and actual generation dispatch.

Unit Capacities - Summer

Units used in determining the generation resources in the Summer Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Name	2008	2009	2010	2011	2012	2013

Unit Capacities - Summer

Units used in determining the generation resources in the Summer Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Name	2008	2009	2010	2011	2012	2013

Unit Capacities - Summer

Units used in determining the generation resources in the Summer Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Capacities - Summer

Units used in determining the generation resources in the Summer Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Capacities - Winter

Units used in determining the generation resources in the Winter Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Name	2008/09	2009/10	2010/11	2011/12	2012/13	2013/14

Unit Capacities - Winter

Units used in determining the generation resources in the Winter Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Name	2008/09	2009/10	2010/11	2011/12	2012/13	2013/14

Unit Capacities - Winter

Units used in determining the generation resources in the Winter Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Capacities - Winter

Units used in determining the generation resources in the Winter Summary

Operational capacities are based on unit testing. Other capacities are based on information provided by the plant owners. This list includes MW available to the grid from private network (self-serve) units. It also includes distributed generation units that have registered with ERCOT. Data without unit names are for private network units or are planned generation that is not public.

Unit Name	2008/09	2009/10	2010/11	2011/12	2012/13	2013/14
	0.0	0.0	249.0	249.0	249.0	249.0
	0.0	0.0	750.0	750.0	750.0	750.0
