**OC LRI Outage Commitments Inspection  
Day 2**

**Inspection Progress**

- 1) Progress is Slow. Licensee's NDE activities are behind schedule. Drywell sandbed NDE, scheduled to start early this morning is still on hold. Dave Lew did a drywell tour, but sandbed access not yet established.
- 2) The coordination between their LR people and outage work management has been weak. There were also some dosimetry problems [now corrected]. As a result, we've missed several inspection opportunities, including some [less critical] drywell UTs. I raised this concern during my daily debrief with them.

**Today's Inspection Activities**

- 1) Drywell cable inspection, for indications of accelerated insulation aging (3 hours in the DW with 2 electricians & a design engineer). In general, cables looked ok. No significant deficiencies noted.
- 2) Fatigue Monitoring Program reviewed. No changes identified to the list of high cumulative usage factor (CUF) components.
- 3) Fire barrier inspection inside a switchgear (periodic surveillance program). Nothing noteworthy.

**LR Commitment Issues or Concerns**

None.

**Drywell Structural Integrity Issues or Concerns**

None.

**NJ State Interface**

Good.
