I wish to comment on the proposed AREVA facility. In short, as a citizen of the Southeastern Idaho area I strongly support the licensing and construction of this facility. It will provide good jobs and become an asset to the nation to help wean our dependence on foreign oil. There no doubt in my mind that nuclear has to part of the equation to be successful in doing this. We need facilities to provide the fuel for those reactors of the future that this nation will have to build to meet the energy demands of tomorrow. As an employee of the INL I am very familiar with the safeguards put in place by operators of nuclear facilities to protect the environment and public from adverse impacts associated with their operations. I am confident that AREVA will operate this facility in a safe manner.

Obviously as the reviewing body you should look into impacts on water use, releases to the air and water and the mitigations required during your NEPA review. I suggest you give this review a high enough priority that you can complete it in a timely fashion so AREVA can start construction on this facility as soon as possible.

I strongly urge you to consider the support you have seen from those local citizens that are the true stakeholders in this review and understand that many of those that have provided negative comments on this facility do not even live in this area and have a short sighted and biased view of the United States energy issues. Please move forward with this process quickly and thank you for your consideration.

Scott Lyman  
Citizen of Southeastern Idaho
