Subject: Acceptance Review (TAC Nos. ME1376 - ME1383)

By letter dated May 29, 2009, Entergy Operations, Inc., submitted relief request nos. GG-ISI-005 through GG-ISI-012, in accordance with 10 CFR 50.55a. The relief requests are based on limitations due to design configurations that preclude full code examination coverage for ASME code welds and components.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of these relief requests. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it provides technical information in sufficient detail to enable the staff to proceed with its detailed technical review and make an independent assessment regarding the acceptability of the relief requests in terms of regulatory requirements and the protection of public health and safety and the environment. If additional information is needed for the staff to complete its technical review, you will be advised by separate correspondence.
