MEMORANDUM FOR RECORD

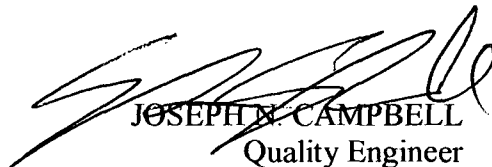

TO: NUCLEAR REGULATORY COMMISSION

FROM: JOSEPH N. CAMPBELL/NDT LEVEL III PT, MT, ET, UT, and RT

SUBJECT: Corrective Action Response to Report No. 030-31524-09-01

This letter is a notification of corrective action for the violations stated in the notification letter dated May 18th, 2009. The violations were identified during an inspection that occurred on April 21st, 2009. They were as follows: failure for the audible warning signal to actuate when an attempt was made to enter the permanent radiographic installation when the source was exposed and failure to test the audible signal for proper operation each day the installation is used for radiography.

The failure of the audible alarm to actuate was corrected immediately in the presence of the inspector. The corrective action taken to ensure that this failure does not happen again is as follows: each day at the start of first shift (4:30am) the source is to be exposed and the entrances are to be opened only enough to break the alignment of the alarm sensors to ensure that the audible alarm sounds. Immediately after confirmation of the alarm sounding the entry is to be closed and the source retrieved before normal cell operations are to begin. There are two entries for each cell that are equipped with an audible alarm and each entry way to each cell is to be checked individually. All personnel in the department have been trained on this procedure and they are to record their findings on a daily checklist that will be put into place Monday June 8th, 2009.
