Bob:

I had responded previously to this e-mail on March 16 and had two action items based on the last paragraph.

- Regarding the ASHRAE and ASCE references, I spoke with the library who referred me to the respective organizations for permissions. I have not pursued that further because of time constraints. Sending hardcopy or electronic versions of even portions of those documents did not appear to be looked on favorably, without such permissions. Best approach right now seems to be to schedule a visit to NRC's office and review the applicable material. If you would like to come in while I am out of the office at Callaway next week, please call Brad Harvey at 301-415-4118 to make arrangements.

There are two CDs in my office in the closed cabinet above my desk that have design temperature data on them (one by ASHRAE, one by NDCD - Engineering Weather Data). Brad or one of the other members in the group can show you how to use them.

- I have not had time to retrieve the ultimate heat sink data or discussion from Section 2.4.4 of the Unit 1 SER. I have a request in to the library for assistance during my absence.

Thanks,

Mike

Subject: Reference Documents TO59

Mike,

FYI

I was looking through the references in NUREG 1555 and noticed that, on page 2.7-16, the three extreme wind speed NUREG/CR's that Leta Brown brought over last Friday are all included in the list of references on that page.

On a related matter, I was trying to find an online website with information on mixing heights. The U.S. Forest Service ventilation index site is being reconstructed and is not available. Do you know of another website that might have data on mixing height climatology that I can use in the Callaway review?

If you get a chance, I still need the ASHRAE and ASCE information and the ultimate heat sink data from Section 2.4.4 of the Unit 1 SER. thanks for your help.

Bob
