**Subject:** RE: Callaway Information Needs List

I looked at the "Acc-\*" information needs, some of which apply to sections 7.2 and 7.3 (my areas of interest). They look like good topics to me.

I'll note that numbers 8, 9, and 19 could probably be resolved by looking at the U.S. EPR FSAR and comparing the final numbers to what's in the ER. Some of the numbers have been amended in an interim markup provided in response to FSAR RAI 2--see the third item in <http://adamswebsearch2.nrc.gov/idmws/ViewDocByAccession.asp?AccessionNumber=ML081920566>.

Also, I'm very interested in hearing what comes out of numbers 14, 17, and 21. Number 14 would help me make more sense of the table of total-population effects in section 7.2 of the ER. Numbers 17 and 21 relate to the non-design-specific SAMAs that can't be done until construction and procedure development is further along. That's something that we want applicants to consider, and many of the items to consider (procedure-wise at least) are in the marked-up versions of the risk insights tables provided in response to U.S. EPR RAI 26 (not yet publicly available in ADAMS, but should be soon). An acknowledgement that they'll use this table (and other resources) to come up with additional items would be great.

Thanks for sharing, and keep me posted!

Subject: Callaway Information Needs List

On the behalf of Bruce Olson, here is the list of Information Needs assembled from review of the Callaway Environmental Report and observations made while starting to draft preliminary sections of the draft EIS. These were posted on the EARRTH site last Friday, and you should have received an alert on where to find it. However, to make things easier, Bruce asked that I send them via email. Please let Bruce and I know by close of business Friday, if you have any additions, comments, or questions regarding these needs.

Thanks,  
George
