Subject: Aveva in Idaho

Testimony concerning Aveva in Idaho:

Please take into consideration the environmental track record of Aveva. How much have they polluted the English Channel and surrounding waters? How much will they pollute the land and water in Idaho? Please take into consideration the historical and international implications of reprocessing Uranium 235. The USA is telling the rest of the world not to so why should we? Please question what will happen to the waste? One hears all the time how clean nuclear energy is but within that statement the issue of waste is glossed over. Please ask how much water is going to be used? Where will it come from? Please make sure there are hearings state wide as tax incentives have been offered to Aveva by our state legislature. Is it true the French government subsidizes Aveva? Will Idaho and/or the USA be doing the same thing if they build here?
