Document_Title: Draft Regulatory Guide DG-1222

Comments: Has there been any industry experience of failed welds that would lend to this decision by the NRC to impose a post pre-heat maintenance for a minimum of four hours. There are components may require a 200° preheat but do not require PWHT. Does this rule still apply? The term low-alloy can cover a number of materials. Does the NRC have any specific materials of concern?
