**Subject:** OC LRI Update Nov 20

Thursday afternoon AmerGen provided us an update on the two issues below. It was a good exchange of information and viewpoints. NJ DEP (Ron Zak & Pat Mulligan) listened and had an opportunity to ask questions of AmerGen at the end. The conference call lasted about 30 minutes.

AmerGen's perspective was that they adequately implemented the two commitments in question because their actions "met the intend" of the commitments.

[Redacted]

(b)(5)

EX.5

Please remember our time table, to reach a consensus, is very short.

Thanks for the continued support  
John R.

ps: Have a Great Thanksgiving Day!!!

**Subject:** RE: OC Update Call on Strippable Coating & sand Bed Drain Commitments

AmerGen's update will discuss their basis that the commitments were adequately implemented

**Telecom Update**

Date Today (11/20)

Time 3:00 PM

Bridge 888-946-6308

Passcode (b)(2)High

Duration 1/2 hour

8 bridge lines are available

EX. 2 High

**The 2 commitments in question**

(1) SER Commitment 27, ASME Section XI, Subsection IWE. Item (2), A strippable coating will be applied to the reactor cavity liner to prevent water intrusion into the gap between the drywell shield wall and the drywell shell during periods when the reactor cavity is flooded.

**AmerGen was asked to provide the following information**

- > Performance of the strippable coating during the two previous outages (2006 & 2004)
- > Any condition reports (CRs), issue reports (IRs), or action requests (ARs) associated with the strippable coating from the 2006 outage

(2) SER Commitment 27, ASME Section XI, Subsection IWE. Item (3), The sand bed region drains will be monitored daily during refueling outages.

**AmerGen was asked to provide their basis to conclude this commitment had been adequately satisfied, in light of the following**

- > Sand bed drains were monitored by checking poly bottles, attached to the drain lines by tygon tubing. The drain lines could not be directly observed.
- > After the cavity was drained, 2 of 5 tygon tubes were found to be disconnected and laying on the floor.
- > Sand bed Bay 11 drain line poly bottle was empty during each daily check until Nov 15 (cavity was drained on Nov 12), when it was found full (> 4 gallons). Bay 11 was entered, visually inspected, and found dry. AmerGen believes that the 4+ gallons had been held up in the catch funnel (not directly observable). This implies that the Bay 11 drain line had not be draining into the poly bottle for some period of time.
