Subject: STP Federal Consistency Certification Request

Jessie,

As requested, attached is a copy of STPNOC's April 22, 2008 submittal to the Texas General Land Office requesting federal consistency certification of the COLA. Note that the enclosure, a DVD which included a copy of the COLA, is not submitted since that information has already been docketed.

Mr. Benjamin Rhame Secretary, Coastal Coordination Council Texas General Land Office P.O. Box 12873 Austin, TX 78711-2873

> South Texas Project Units 3 and 4 Federal Consistency Certification Request in Support the Combined License Application for South Texas Project Units 3 & 4

- References: (1) Letter, M.A. McBurnett (STPNOC) to T. Williams (GLO), "Information to be Submitted in Support of the Federal Consistency Certification for the Combined License Application for South Texas Project Units 3 & 4," dated May 22, 2007 (ABRTX07016154).
  - (2) Letter, N. Polk (GLO) to R.W. Kiesling (STPNOC), "Information to be Submitted for GLO and CCC Review", dated June 25, 2007.

Reference 1 committed to specific information to be provided to the Texas General Land Office (GLO) and the Coastal Coordination Council (CCC) to facilitate review of a Federal Consistency Certification Request for the construction and operation of STP Units 3 and 4. Reference 2 is the GLO concurrence that the information will be adequate for the GLO and the Coastal Coordination Council (CCC) review pursuant to the requirements of 31 TAC 506.30 and 15 CFR 930.58. This letter transmits the information referred to in Reference 1 and the items listed below correspond to those in that letter.

A. A copy of the application for the federal license as submitted to the Nuclear Regulatory Commission (NRC):

Enclosed with this letter is a DVD containing the complete Combined Operating License Application (COLA) Rev. 1.0 dated March 8, 2008. The COLA is organized into nine (9) parts. Part 3 is the Environmental Report (ER) component of the COLA.

B. A detailed description of the proposed activity and its associated facilities, which is adequate to permit an assessment of their possible effects on Coastal Natural Resource Areas (CNRAs):

Attachment 1 to this letter is a description of the proposed project which consists of the construction and operation of two new nuclear fueled power generating units at the site of the existing STP Units 1 & 2. Additional details are available in the COLA enclosed with this submittal.

C. A list identifying all federal, state, and local permits or authorizations subject to the TCMP and required for the proposed activity and its associated facilities:

Attachment 2 to this letter contains a comprehensive list of all permits and approvals anticipated from federal, state and local agencies along with the status and projected submittal dates of each.

D. A brief assessment relating to the relevant elements of the TCMP and the probable effects of the proposed activity and its associated facilities on CNRAs:

Attachment 3 to this letter contains a list of each of the CNRAs identified in the TCMP along with the probable effects from the construction and operation of STP Units 3 & 4 on these resource areas.

E. An evaluation indicating the project and its effects are consistent with TCMP goals:

Attachment 4 to this letter contains a list of the goals of the TCMP and the consistency of the effects of the construction and operation of STP Units 3 & 4 on these goals.

F. An evaluation indicating that the project and its effects are consistent with TCMP policies:

Attachment 5 to this letter contains a list of the policies of the TCMP and the consistency of the effects of the construction and operation of STP Units 3 & 4 on these policies.

G. Consistency certification:

"STPNOC certifies that the proposed activity (construction and operation of South Texas Project Units 3 & 4) complies with Texas' approved coastal management program and will be conducted in a manner consistent with such program."

Please feel free to call me at (361) 972-4626 or Russell W. Kiesling at (361) 972-4716 should you have any questions regarding this certification submittal.

# ATTACHMENT 1

# **DESCRIPTION OF THE PROJECT**

# **The Proposed Project**

Pursuant to the Atomic Energy Act of 1954, as amended, and Title 10 of the Code of Federal Regulations, STP Nuclear Operating Company (STPNOC) on behalf of itself and the owners of STP Units 3 & 4: NRG South Texas 3 LP, NRG South Texas 4 LP, and the City of San Antonio, Texas acting by and through the City Public Service Board (CPS Energy) is submitting a Combined Operating License Application (COLA) to authorize the construction and operation of two new nuclear power facilities (STP 3 & 4) on the site of South Texas Project Electric Generating Station, Units 1 & 2 (STP 1 & 2) in Matagorda County, Texas (STP site).

# **Purpose and Need**

The proposed federal action requiring a consistency certification is the Nuclear Regulatory Commission's (NRC) issuance of a Combined Operating License (COL) to the applicants authorizing the construction and operation of two Advanced Boiling Water Reactors (ABWRs) at the STP site. The purpose of STP 3 & 4 is to provide baseload generation for use by the owners and/or for eventual sale on the wholesale market. At this time, it is planned that STP Unit 3 will be owned by NRG South Texas 3 LP and CPS Energy, and that STP Unit 4 will be owned by NRG South Texas 4 LP and CPS Energy.

# **Site Location**

The STP site is located on approximately 12,220 acres in a rural area of Matagorda County, Texas, approximately 12 miles south-southwest of the city limits of Bay City, Texas, and 10 miles north of Matagorda Bay, along the west bank of the Colorado River (Figures 1 & 2). The plant footprint for STP Units 3 & 4 is approximately 2000 feet northwest of existing STP Units 1 & 2 and is generally the area that had been designated for two additional units when the facility was first planned. The location of STP Units 3 & 4 on the STP site is shown in Figure 3.

# **Reactor Information**

STPNOC and the owners have selected the Advanced Boiling Water Reactor (ABWR) as the technology for two new reactors at the STP site, STP 3 & 4. The total gross thermal megawatt output is 3926 MWt and the net electrical output is approximately 1300 MWe per unit.

# **Cooling System Information**

STP Units 3 & 4 will use a closed-loop cooling water system that would withdraw and discharge water from and to the Main Cooling Reservoir (MCR), similar to the existing cooling system for STP Units 1 & 2. Makeup water for the MCR will be withdrawn from the Colorado River using the preexisting intake structure. STP Units 3 & 4 will use mechanical draft cooling towers to dissipate waste heat from auxiliary plant systems and as a water storage basin for the safety-related cooling system (Ultimate Heat Sink). The STP Units 3 & 4 cooling tower basin makeup

water is normally provided by the plant well water system. Blowdown will discharge to the MCR. Ultimately, discharges from the MCR will be made to the Colorado River via the blowdown spillway structure in order to maintain required water quality levels in the MCR.

# **Transmission System Information**

The STP 3 & 4 connections to the regional grid will use existing rights-of-way to minimize, to the extent feasible, new disturbances and potential adverse impacts. The onsite power transmission system for STP 3 & 4 consists of the STP Units 3 & 4 345kV switchyard, five 345kV power transmission lines, and a 345kV tie-line from the STP Units 3 & 4 345kV switchyard to the existing STP Units 1 & 2 345kV switchyard. Two of these 345kV transmission lines will be upgraded from the STP site to their connections to the Hillje substation some 20 miles northwest of the STP site. The modifications to upgrade these two transmission lines will be on an existing right-of-way. No new rights-of-way outside the STP site are required for STP Units 3 & 4.

The three interconnect transmission line rights-of-way commence from the STP Units 3 & 4 345kV switchyard and head northward less than a quarter mile to intersect the existing transmission line corridor. From the point of intersection, the additional power provided by STP Units 3 & 4 would be transmitted over upgraded circuits in an existing right-of-way.

# **Proposed Dates for Major Activities**

NRC regulations provide for COL applicants to perform preconstruction site preparation activities before issuance of the COL. Site redress plans will be in place to return the site to pre-existing conditions if the COL is ultimately not granted. STPNOC could start preconstruction site preparation activities in January 2009 and conclude these activities in January 2010.

Construction activities for STP Unit 3 will begin following the site preparation for both STP Units 3 & 4. STPNOC expects to initiate construction of STP Unit 3 in January 2011 and STP Unit 4 in May 2011. STPNOC estimates that construction would occur over a 63-month period for both units, beginning with NRC approval of the COL application in January 2011. Commercial operation for STP Unit 3 is projected in March 2015 and March 2016 for STP Unit 4.

## **ATTACHMENT 3**

## PROBABLE EFFECTS OF STP UNITS 3 & 4 ON COASTAL NATURAL RESOURCE AREAS

| CNRA                                                           | Effects Due To STP Units 3 & 4 Construction and Operation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Waters of the open Gulf of Mexico                              | No anticipated impacts to waters of the Open Gulf of Mexico from construction or operation of STP Units 3 & 4 are anticipated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Tidally influenced waters<br>not in the open Gulf of<br>Mexico | Potential impacts to the Colorado River waters from construction include<br>increases in turbidity due to maintenance dredging at the existing Reservoir<br>Makeup Pumping Facility (cooling water intake structure) and the barge landing<br>facility. These impacts have been characterized as SMALL and would not<br>require mitigation beyond the use of the Best Management Practices required by<br>the USACE permits issued for this work. Operational impacts would include an<br>increase in potential impingment and entrainment of aquatic organisms during<br>makeup pumping activities. These impacts are considered to be SMALL as the<br>USEPA and TCEQ have certified that the design, location and operation of the<br>intake structure reflect Best Technology Available as required by Section 316(b)<br>of the CWA. |
| Submerged lands under<br>Coastal Waters                        | The existing barge landing facility and the Reservoir Makeup Pumping Facility are located on submerged lands under coastal waters. No new structures will be placed on submerged lands for construction and operation of STP Units 3 & 4; however, maintenance activities including dredging and upgrading of existing equipment will occur in accordance with existing permits. STPNOC and GLO are currently modifying the existing lease terms and conditions relating to these facilities. Impacts to submerged lands as a result of the maintenance of these facilities will be SMALL.                                                                                                                                                                                                                                              |
| Coastal wetlands                                               | Coastal wetlands occur on the STP site. All wetlands have been avoided in the planning for Units 3 & 4 construction with the exception of one isolated wetland less than 0.2 acres in size. This wetland will be filled to construct the planned cooling tower serving Units 3 & 4 plant auxiliary systems. The loss of this wetland will be SMALL. The remaining wetlands on the site which may be located near planned construction activities will be clearly marked in the field with sufficient buffer allowance to ensure their protection. Other management practices will be employed on a case by case basis as construction plans become available.                                                                                                                                                                           |
| Submerged aquatic vegetation                                   | No areas of submerged aquatic vegetation occur at the site, therefore none are affected by STP Units 3 & 4 construction or operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Tidal sand and mud flats                                       | No tidal sand or mud flats occur at the site, therefore none are affected by STP Units 3 & 4 construction or operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## **ATTACHMENT 4**

#### **STP UNITS 3 & 4 CONSISTENCY WITH TCMP GOALS**

### **TCMP** Goal

(1) to protect, preserve, restore, and enhance the diversity, quality, quantity, functions, and values of coastal natural resource areas (CNRAs).

(2) to ensure sound management of all coastal resources by allowing for compatible economic development and multiple human uses of the coastal zone.

(3) to minimize loss of human life and property due to the impairment and loss of protective features of CNRAs.

(4) to ensure and enhance planned public access to and enjoyment of the coastal zone in a manner that is compatible with private property rights and other uses of the coastal zone.

(5) to balance the benefits from economic development and multiple human uses of the coastal zone, the benefits from protecting, preserving, restoring, and enhancing CNRAs, the benefits from minimizing loss of human life and property, and the benefits from public access to and enjoyment of the coastal zone.

## STP Units 3 & 4 Consistency

The construction and operation of STP Units 3 & 4 will have minimal impact on CNRAs and, consequently no negative impacts on the diversity, quality quantity, functions and values of these areas. Thus, the project is consistent with this goal.

The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform goals of the TCMP through the exercise of their respective statutory authorities. Consistency with this goal is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

The construction and operation of STP Units 3 & 4 will cause no impairment to or loss of any protective features of CNRAs. Thus, the project is consistent with this goal.

The construction and operation of STP Units 3 & 4 will affect no existing or planned public access or enjoyment of the coastal zone.

The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform goals of the TCMP through the exercise of their respective statutory authorities. Consistency with this goal is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

## STP UNITS 3 & 4 CONSISTENCY WITH TCMP GOALS Continued

#### **TCMP Goal**

(8) to make agency and subdivision decisionmaking affecting CNRAs more effective by employing the most comprehensive, accurate, and reliable information and scientific data available and by developing, distributing for public comment, and maintaining a coordinated, publicly accessible geographic information system of maps of the coastal zone and CNRAs at the earliest possible date.

(9) to make coastal management processes visible, coherent, accessible, and accountable to the people of Texas by providing for public participation in the ongoing development and implementation of the Texas CMP.

(10) to educate the public about the principal coastal problems of state concern and technology available for the protection and improved management of CNRAs.

### STP Units 3 & 4 Consistency

The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform goals of the TCMP through the exercise of their respective statutory authorities. Consistency with this goal is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform goals of the TCMP through the exercise of their respective statutory authorities. Consistency with this goal is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

| 31 TAC 501.16(a)(1)  | STP Units 3 & 4 are located at an existing nuclear power plant site originally developed to support four units.<br>No public beaches are affected by this project.                                                                                                                                                                                                                                                                                                                      |
| 31 TAC 501.16(a)(2)  | STP Units 3 & 4 will employ closed-loop cooling systems rather than once-through technology. No new cooling water intake structures will be constructed for STP Units 3 & 4. The existing intake structures installed for Units 1 & 2 have been certified by TCEQ to demonstrate Best Technology Available under Section 316(b) of the Clean Water Act.                                                                                                                                 |
| 31 TAC 501.16(a)(3)  | No CNRAs are affected by the proposed construction and operation of STP Units 3 & 4. Impacts on areas used for spawning, nesting and seasonal migrations of fish and wildlife species will be minimized to the extent practicable.                                                                                                                                                                                                                                                      |
| 31 TAC 501.16(a)(4)  | No new electric transmission lines associated with the construction and operation of STP Units 3 & 4 will affect<br>Coastal Barrier Resource System Units or Otherwise Protected Areas regulated under the Coastal Barrier<br>Resources Act.                                                                                                                                                                                                                                            |
| 31 TAC 501.16(b)     | The construction and operation of STP Units 3 & 4 will not require a Certificate of Convenience and Necessity from the PUC.                                                                                                                                                                                                                                                                                                                                                             |

### STP UNITS 3 & 4 CONSISTENCY WITH APPLICABLE TCMP POLICIES Continued

#### 31 TAC 501.21 Policies for Discharge of Municipal and Industrial Wastewater to Coastal Waters

31 TAC 501.21(a-d) The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform policies of the TCMP through the exercise of their respective statutory authorities. Consistency with this policy is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

#### 31 TAC 501.22 Policies for Nonpoint Source (NPS) Water Pollution

31 TAC 501.22(a-d) The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform policies of the TCMP through the exercise of their respective statutory authorities. Consistency with this policy is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

#### 31 TAC 501.23 Policies for Development in Critical Areas

31 TAC 501.23(a-d) The construction and operation of STP Units 3 & 4 will not impact any Critical Areas as defined in 31 TAC 501.3

### 31 TAC 501.24 Policies for Construction of Waterfront Facilities and Other Structures on Submerged Lands

- 31 TAC 501.24(a) The construction and operation of STP Units 3 & 4 will not require new waterfront facilities or other structures on submerged lands.
- 31 TAC 501.24(b)STP Units 3 & 4 will have no impacts on beach access or use rights of the public.31 TAC 501.24(c)The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform policies of the TCMP through the exercise of their respective statutory authorities. Consistency with this policy is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

## STP UNITS 3 & 4 CONSISTENCY WITH APPLICABLE TCMP POLICIES Continued

#### 31 TAC 501.25 Policies for Dredging and Dredged Material and Placement

- 31 TAC 501.25(a-c) Dredging associated with the maintenance of the River Makeup Pumping Facility (makeup water intake structure) and the barge slip is approved by existing Army Corps of Engineers Permits No. 10570(6) and 14848(4). Dredged material will be disposed of in an upland disposal area identified in the permits in accordance with the terms and conditions contained therein and in accordance with the provisions of the Section 401(b) Certification issued by the TCEQ.
- 31 TAC 501.25(d) There are no presently identified beneficial uses for the dredged material. However, it will be permanently located at the approved disposal site and available should a beneficial reuse be identified.

### 31 TAC 501.32 Policies for Emission of Air Pollutants

31 TAC 501.32 The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform policies of the TCMP through the exercise of their respective statutory authorities. Consistency with this policy is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.

#### 31 TAC 501.33 Policies for Appropriations of Water

31 TAC 501.33(a & b) The primary responsibility of the network of state agencies and subdivisions that are subject to the provisions of the TCMP is to ensure that proposed actions are consistent with the uniform policies of the TCMP through the exercise of their respective statutory authorities. Consistency with this policy is assured by this responsibility. The status of all approvals, permits and consultations with networked state agencies and subdivisions is presented in Attachment 2.
