1.0 BACKGROUND

Combined Operating License (COL) Applications are submitted pursuant to Section 52 of Title 10 of the *Code of Federal Regulations* (10 CFR 52), "Early Site Permits; Standard Design Certifications; and Combined Licenses for Nuclear Power Plants." The U.S. Nuclear Regulatory Commission (NRC) reviews COL Applications based on information furnished by electric utility companies pursuant to 10 CFR 52.79, "Contents of Applications Technical Information."

A Standard Review Plan (NUREG-0800) is prepared for the guidance of staff reviewers in the Office of New Reactors in performing safety reviews of applications to construct or operate nuclear power plants and the review of applications to approve standard designs and sites for nuclear power plants. The principal purpose of the SRP is to assure the quality and uniformity of staff safety reviews.

An Environmental Safety Review Plan (NUREG-1555) is prepared for the guidance of staff reviewers in performing environmental reviews of applications related to nuclear power plants. The ESRPs are companions to regulatory guides that address siting and environmental issues. As with NUREG-0800 the purpose of the ESRP is to assure the quality and uniformity of environmental reviews.

The staff publishes the results of these reviews in a Safety Evaluation Report (SER).

2.0 OBJECTIVE

The objective of this task order is to obtain technical expertise from the contractor to assist the NRC staff in developing the Office of New Reactors (NRO) Construction Inspection Program (CIP). Tasks under this Scope of Work include the following programs in the CIP.

Inspections, Tests, Analyses, and Acceptance Criteria (ITAAC) Program Development

Assist with the development of the submittal process, requirements, steps, criteria, and inclusions to incoming submittals to the CIP. Also, develop guidance for the nuclear power industry for standardizing the construction inspection and ITAAC-related submittals.

Construction Experience Program

To acquire expert technical assistance services to support systematic, independent evaluation of domestic and international construction and operating experience (*ConE-OpE*). These tasks include:

- Short-term analyses of diverse *ConE/OpE* sources for trends and insights,
- Short-term detailed, independent evaluations of complex *ConE-OpE* issues to determine safety significance and generic applicability,
- Production of periodic *ConE-OpE* summary reports in high-quality packaging. Each summary report would highlight particular operating experience over a specific time period and may emphasize risk-significant events and conditions, issues of generic implications, or trends and insights, as appropriate,
- Short-term assistance with drafting an NRO Office Instruction describing the Construction and Operational Experience Program,
- Short-term review and evaluation of inspection reports, including vendor inspection and quality assurance audit report, for identification of applicable *ConE-OpE* and lessons learned,

Enforcement and Assessment Activities

Assist with the development of enforcement and assessment methodologies, including the development of implementing procedures, training materials, and guidance documents.

The deliverables or output of these programmatic development tasks will vary from written procedures to implementing supporting software packages. Due to the varying nature of the output, the expectations will be defined on a task by task basis as the work is assigned.
