Subject: FYI: GEH (Silex): Phone Call with Julie Olivier

Gregory,

Julie Olivier called me today. She said GEH would like to avoid having classified or export-controlled process information in the ER and asked if they could simply reference the appropriate sections of the SAR in the ER. I said that would be acceptable if the ER was submitted with the LA, but would obviously be a more complex issue if the ER is submitted early. She indicated she understood referencing the SAR would be problematic if the ER is submitted early.

She also asked if information on the Environmental Monitoring program would need to be repeated in the SAR or if the SAR could reference the information in the ER. I spoke with Tim Johnson who indicated the SAR should contain all of the information specified in the SRP, irrespective of what is in the ER. I conveyed this to Julie and indicated that, from our point of view, the ER can reference the SAR, given the obvious limitations if the ER is submitted early.

Thanks.
