Re: Source Materials License SUA-1534
Docket No. 40-8943
CM 9-4 Monitor Well Excursion

Dear Mr. McConnell:

On June 11, 2009 during routine biweekly water sampling of Cameco Resources, Crow Butte Operation (CBO) commercial monitor well CM9-4, the single parameter upper control limit (UCL) for alkalinity and the multiple parameter upper control limit (MCL) for conductivity were exceeded. As required by License Condition 11.2 of Source Materials License SUA-1534, a second sample was collected within 48 hours and analyzed for the three excursion indicator parameters. The results of the second sample exceeded the single UCL for alkalinity, confirming an excursion. The MCL for conductivity was not exceeded in the second sample.

CBO notified Mr. Ronald Burrows on June 12, 2009 at 0940 MDT of the confirmation of the exceedance, as required in License Condition 9.2. Laboratory results for the sample analysis for CM9-4 are attached. In addition, graphs are attached for the three excursion indicator parameters and water levels that cover the period from October 2, 2008 to June 12, 2009.

This well began slowly trending upward with the April 16, 2009 sample. For the last month, CBO has been overproducing this area in an effort to curb the trend. This effort has resulted in a drop of 11 feet in water level, but the parameters continue to trend upward. The complexity of the geology in this area presents challenges in controlling the movement of mining solutions. CBO has repaired a production well that will help draw the mining solutions back from the monitor well ring.

Additionally, two more injection wells were turned off on June 12, 2009. In total, seven injection wells have been turned off since May 15, 2009, and a larger pump was installed in the nearest production well which increased flow from 20 gpm to 30 gpm.

In accordance with License Condition 11.2, CBO has increased the sampling frequency for CM9-4 to weekly until three consecutive weekly samples are below the exceeded UCLs. CBO will continue weekly sampling for an additional three weeks after this goal has been achieved as required by CBO's NDEQ Class III UIC Permit requirements. If the well has not exceeded the UCLs after these samples, it will be returned to normal status.

If you have any questions or require any further information, please do not hesitate to call me at (308) 665-2215 ext 117.

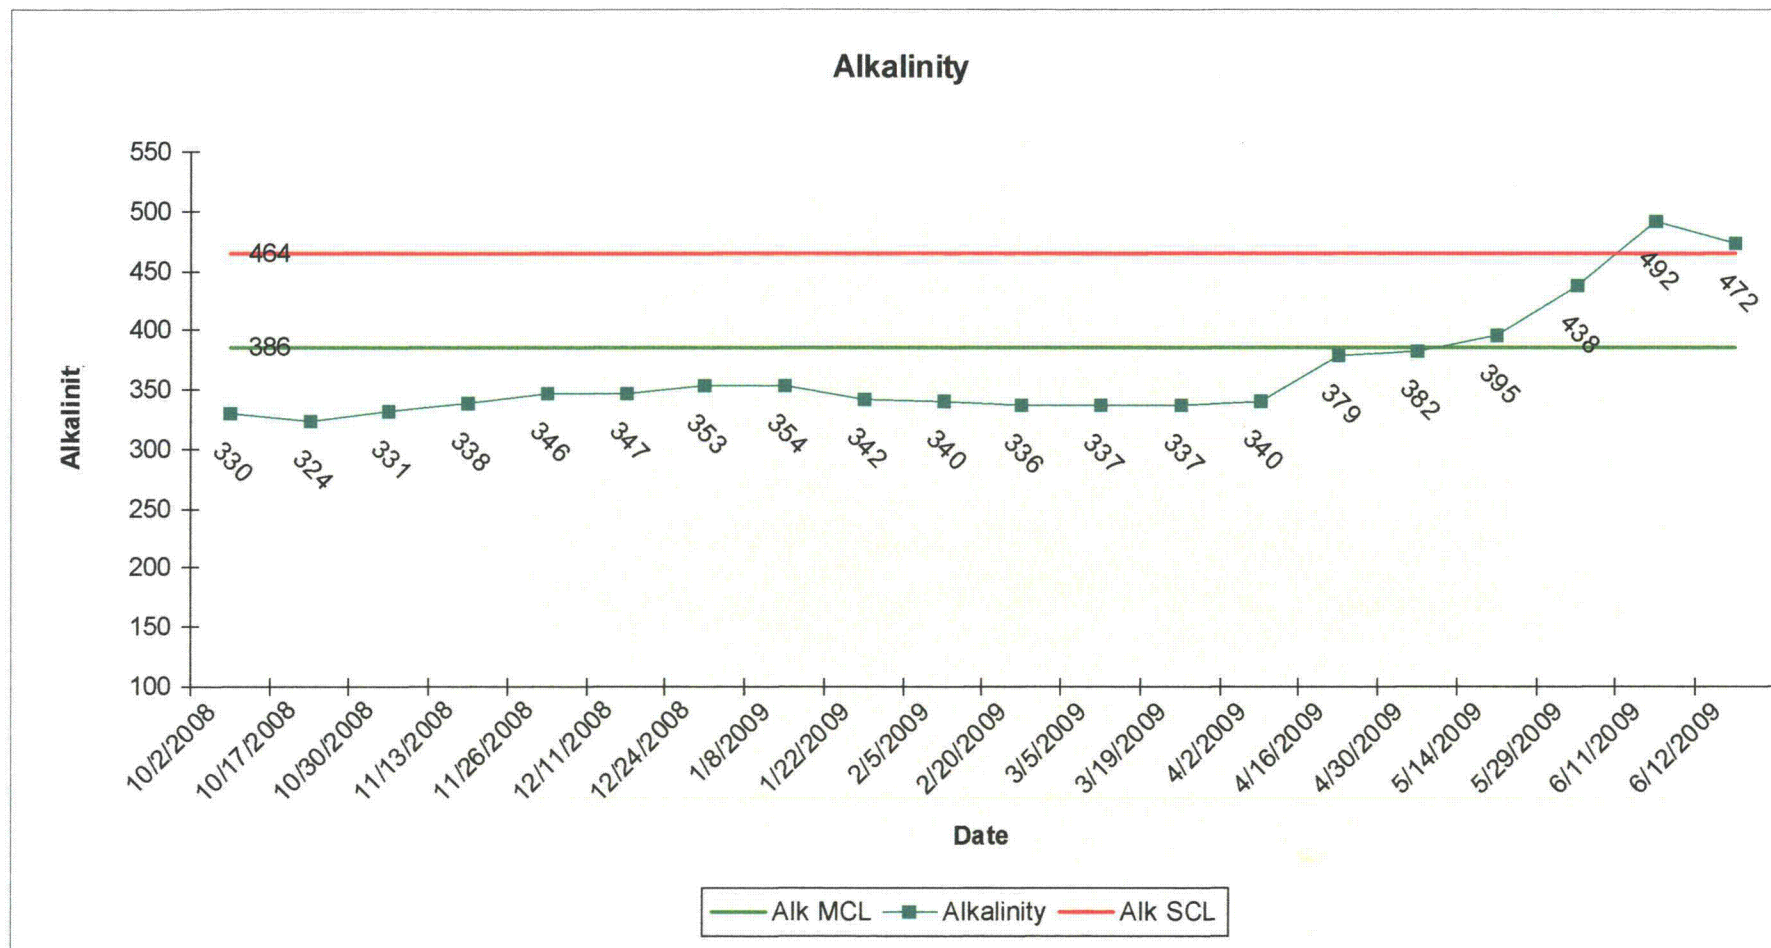

Sincerely,
CAMECO RESOURCES, CROW BUTTE OPERATION

Walt Nelson
Environmental Leadership Coordinator
