

BBNPP Post-Audit Information Submittal LU-21:

Resolution of apparent discrepancies related to forested and agricultural percentages of values listed in Table 2.2-1 and text provided in ER section 5.1.1.

Response:

The text provided in ER section 5.1.1, in paragraph 5 on page 5-2 of Rev. 1, is inconsistent with the information that appears in Table 2.2-1. The percentages in the text should agree with the percentages in Table 2.2-1. The percentage of forested area in the text should be 45.6% not 64.4%. The percentage for agricultural land should be 28.6% not 28.7%. The inconsistencies in Section 5.1.1 were associated with earlier revisions to the boundary of the Owner Controlled Area.

ER Impact:

ER Section 5.1.1 will be revised as follows:

Land use at the BBNPP OCA is indicated in Table 2.2-1. Forest is the most common land use within the BBNPP OCA. The forested area represents approximately ~~64.4~~45.6% of the BBNPP OCA acreage. Agricultural is the next highest land use area classification within the BBNPP OCA. The agricultural area represents approximately ~~28.7~~28.6% of the BBNPP OCA acreage.
