Attention: Document Control Desk
Director, Office of Nuclear Material Safety Safeguards
U.S. Nuclear Regulatory Commission
Washington, DC 20555-0001

Gentlemen:

Subject: SUB-526
Docket No. 40-3392

We have enclosed six (6) copies of our "Facility Effluent Report" representing the period of January 1, 2009, through June 30, 2009.

Sincerely,

Mitch Tillman
Plant Manager

Enclosure: Facility Effluent Report (6)

FACILITY EFFLUENT REPORT

TYPE OF FACILITY:

UF₆ Conversion

LICENSE:

Source Materials No. SUB-526
Docket No. 40-3392

FACILITY ADDRESS:

Honeywell - Metropolis Works
P. O. Box 430
Metropolis, IL 62960

REPORTING PERIOD:

January 1, 2009 – June 30, 2009

GASEOUS EFFLUENTS:

1. The average release rate for the reporting period = $5.5E^5$ ACFM.
2. The principle radionuclides released are particulate, oxides and fluorides as follows:

January 1 – June 30, 2009

Uranium (Nat.)	=	$6.22 e^{-2}$ curies (measured)
Ra ²²⁶	=	$4.41 e^{-6}$ curies (Note 1)
Th ²³⁰	=	$8.83 e^{-5}$ curies (Note 1)

LIQUID EFFLUENTS:

1. The average release rate for the reporting period = 1903 GPM.
2. The principle radionuclides released are as follows:

Uranium (Nat.)	=	$3.47 e^{-1}$ curies (measured)
Ra ²²⁶	=	$3.49 e^{-3}$ curies (measured)
Th ²³⁰	=	$2.05 e^{-4}$ curies (measured)

NOTES 1:

Calculated from measured Th²³⁰ and Ra²²⁶ content of the various types of ore concentrates processed during the reporting period. As the ratio from exit points of these nuclides to uranium is assumed to be the same as in the concentrates, this calculation results in conservative (high) reported quantities.
