Marie / Sattar,

Please find attached our 30-Day report for the incident with one of our portable gauges. I will also be sending you a hard copy via FedEx for delivery on Monday.

I apologize again for not getting this to you sooner. I just received the final disposal documentation today from Qal-Tek.

Let us know if you have any questions.

Thanks,
Art

Thank you for the information. I am OK with waiting for the disposal information to close-out the 30-day report.

Marie,

After the repair technician (MJW Technical Services) inspected the gauge and determined the extent of the damage, it was determined that it would not be cost effective to repair. Therefore, we authorized them to dispose of the gauge.

The sources are being disposed by Qal-Tek Associates via NDG & Ignition Oven Disposal; please see attached paperwork.

I am waiting to get the final paperwork back from Qal-Tek that shows that the gauge was properly disposed. Once I have this paperwork, I will finalize our 30-day written report.

Please let me know if this is acceptable to you.

Thanks,
Art

Thank you. Sattar Lodhi from my staff went to the site yesterday afternoon to confirm the control and storage of the gauge. We will close-out the inspection when we receive your 30-day written report.

Subject: Damaged Portable Gauge (Langan Engineering)

Marie,

I apologize for not getting back to you earlier today. I was out of the office all morning at job meetings.

I have been in communication with Sapat? from the NRC. He will be doing a site inspection at our Christiana Mall project today. I provided him with a contact name and phone number for our personnel down there.

As requested, please find attached a site location map of the Christiana Mall and a work area map that show where the gauge was damaged. The work being completed in the Nordstrom's area is the excavation of existing footings and controlled backfill and pad subgrade preparation. There is no public access to this area as the entire pad is fenced off to the east and west, and to the north are the construction trailers which are also fenced off.

I have also attached the Nuclear Gauge training certificate for the user that was responsible for the gauge when it was damaged. His name is John "Jack" Wallace. Besides taking the course, I had Jack

watch a video of our Nuclear Gauge Refresher course that I gave in 2008. Even though Jack was a new user, he was being supervised by more experienced personnel/users.

Please let me know if you need any more information.

Thanks,
Art
