17.0 QUALITY ASSURANCE**17.1 Quality Assurance During Design and Construction****17.1.1 TVA Organization**

The information presented in "Nuclear Power Organization Description," TVA-NPOD89-A, is applicable to Watts Bar Nuclear Plant.

17.1.2 Quality Assurance Program

The information presented in Tennessee Valley Authority Nuclear Quality Assurance Plan, TVA-NQA-PLN89-A (latest NRC approved revision), is applicable to Watts Bar Nuclear Plant.

17.1A WESTINGHOUSE NUCLEAR ENERGY SYSTEM DIVISIONS QUALITY ASSURANCE PLAN**WESTINGHOUSE NUCLEAR ENERGY SYSTEM DIVISIONS QUALITY ASSURANCE PLAN**

The contents of this chapter can be found in the Westinghouse Energy Systems Business Unit (ESBu) Quality Management System(QMS) Topical Report^[1] current revisions, with the exception of the identification of safety-related equipment, which is covered in Section 3.2 of this FSAR.

17.2 QUALITY ASSURANCE FOR STATION OPERATION

See the TVA Nuclear Quality Assurance Plan, TVA-NQA-PLN89-A.^[1]

17.2.1 Identification of Safety-Related Features

The Watts Bar Nuclear Plant Q-List is a listing of structures, systems, and components covered by the Nuclear Quality Assurance program as set forth in the Nuclear Quality Assurance Plan, TVA-NQA-PLN89-A.

The Q-List consists of a combination of an itemized section and notes. Items addressed on this list are handled in accordance with the TVA Quality Assurance Program. The Q-List contains safety-related features. Safety-related features are those structures, systems, and components that are necessary to ensure:

- (1) The integrity of the reactor coolant pressure boundary.
- (2) The capability to shut down the reactor and maintain it in a safe condition.
- (3) The capability to prevent or mitigate the consequences of an incident which could result in potential offsite exposures comparable to those specified in 10 CFR 100.

Additionally, the Q-List includes quality-related and some non quality-related features which are not safety-related. TVA identified quality-related features are also defined by the TVA Nuclear Quality Assurance Plan.

The Q-List is in a QA software database, as a computer generated list and is maintained per engineering site procedure. Hard copy reports, (i.e., Q-List), are extracted from the data base and can be issued as QA design outputs. The data is accessible from computer terminals throughout the plant.

In addition, a site wide procedure provides guidelines for using the WBN Q-List to determine the 10CFR 50, Appendix B QA program application. Q-List changes are controlled through the design change process/administrative process to ensure continued completeness and accuracy.
