## SUBJECT

Control No. 318272 -- Re amendment request by letter dated June 9, 2009, for License No. 24-16178-01, to add and delete authorized users, add a new nearby address of use and to remove/delete two license authorized materials from License Items 6 through 9.

## SUMMARY

In the telephone conversations on this date with Mr. Brown, we discussed the apparent discrepancy in his letter dated August 26, 2009, confirming that it was Dr. Rajendran Sabapathy, M.D. (not Venkat Pasnoori, M.D.) named on the documentation submitted showing successful completion of the exam to be a Board Certified Nuclear Cardiologist as well as being the individual named on the documents submitted showing related continuing education in the field of nuclear cardiology. Further, it was noted, however, that the information submitted to add Rajendran Sabapathy, M.D., to the license for use of material under 10 CFR 35.100, 35.200 and 35.300 was not sufficient. The need to submit a copy of the CBNC certificate (not just the acknowledgment letter) issued by the Certification Board of Nuclear Cardiology to Dr. Sabapathy, was noted. Also the need to fill out and submit for Dr. Sabapathy "Authorized User Training and Experience and Preceptor Attestation" forms, i.e. NRC Form 313A (AUD) for uses defined under 35.100 and 35.200 and NRC Form 313A (AUT) for uses defined under 35.300, was noted. Being that this would likely be a rather lengthy process, it was agreed that this part of the amendment request would be handled as a separate amendment request at a later date.

It was further noted that the request to remove Lawrence Lee, M.D., as an authorized user from the license had been accomplished during the last amendment, Amendment No. 35, issued August 15, 2008. Also, it was noted that the request to remove the four sealed sources (Isotope Products Model HEG-137, not to exceed 30 millicuries each) of Cesium-137, had been accomplished during Amendment No. 34, issued January 29, 2007.

Regarding the request to remove the Depleted Uranium Stainless Steel covered metal consisting of 4 shields, not to exceed 12 kilograms each (License Item 6.F. through 9.F.), Mr. Brown confirmed that this material was still in the licensee's possession and therefore it was agreed that this licensed material should remain on the license at this time.

## ACTION REQUIRED

License reviewer will utilize the above information in processing the subject amendment request.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this conversation record will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). The NRC's document system is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).
