

The 1989 Grant report includes groundwater elevation contours and flow directional maps for both the shallow and deep wells. The 1996 sampling event confirmed that groundwater flow directions have remained essentially the same. Area shallow groundwater flow is to the northwest where it discharges to the surface or to the Cimarron River alluvium.

## 2.2 1996 Sampling Event Analytical Data and Trend Analysis

This section presents the sample analysis results for the independent samples taken during 1996 for Assessment Area #2, and historic highs for the entire sampling period. Table 2.1 presents the radiochemical analytical results for the April 1996 sampling event; Table 2.2 presents the historical peak concentrations for wells #1314, #1315, #1316 #1317, and surface water locations; Table 2.3 presents the chemical analytical results for the 1996 independent sampling event; and Table 2.4 presents the additional metals and ion chemistry data for well #1314. A tabulation of historical environmental groundwater and surface water data for the monitoring wells and surface locations discussed in this section can be found in Attachment B.

The 1989 Grant report includes groundwater elevation contours and flow directional maps for both the shallow and deep wells. The 1996 sampling event confirmed that groundwater flow directions have remained essentially the same. Area shallow groundwater flow is to the northwest where it discharges to the surface or to the Cimarron River alluvium.

## 2.2 1996 Sampling Event Analytical Data and Trend Analysis

This section presents the sample analysis results for the independent samples taken during 1996 for Assessment Area #2, and historic highs for the entire sampling period. Table 2.1 presents the radiochemical analytical results for the April 1996 sampling event; Table 2.2 presents the historical peak concentrations for wells #1314, #1315, #1316 #1317, and surface water locations; Table 2.3 presents the chemical analytical results for the 1996 independent sampling event; and Table 2.4 presents the additional metals and ion chemistry data for well #1314. A tabulation of historical environmental groundwater and surface water data for the monitoring wells and surface locations discussed in this section can be found in Attachment B.
