Guys,

Is someone in the Region helping Neil with answering the questions from the Asbury Park press (see below)? if you need a hand from me, please let me know...I'm sure we can nuke something together on this...

**Subject:** APP questions re: Oyster Creek

I just got a phone message from the Asbury Park Press asking the following questions about the leakage situation at Oyster Creek:

Were the pipes found to have the holes in them inspected before the NRC granted a license renewal for Oyster Creek?

What is the schedule for inspecting the pipes?

Were the pipes supposed to be covered under the plant's aging management plan?

And if so, why did they have holes in them?

Was the condensate storage tank supposed to be inspected prior to the granting of a license renewal?

And if not, when was it supposed to be inspected?

Can I get some help to respond to these?

Thanks,  
Neil
