Dear Licensing Administrator,

I am writing to request an amendment to Materials License 13-32711-01 Section 8 for OmniSource Corporation, Fort Wayne, Indiana. Section 8 currently states "2 sources, not to exceed 43 mCi per source" may be on site. However, due to replenishment and temporary storage requirements, OmniSource would like to request a change to Section 8 to read:

6 sources not to exceed a total of 43mCi plus
2 sources in storage not to exceed a total of 43 mCi

This request for amendment is due to the necessary replenishment of sources after 2 years. The system is designed to hold multiple sources to reduce the exposure of the radiation worker by handling sources less often. The original sources remain in the instrument while an additional 2 sources are added. After, four years, another 2 sources are added for a total of 6 sources in the instrument (Figure 1). During the time of the third replenishment, 2 sources will be temporarily stored (Figure 2) while licensed engineers remove the six decayed sources. Thus, a total of 8 sources may be on site at one time.
