---	---	--

**LICENSEE:**

The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observations by the inspector. The inspection findings are as follows:

- 1. Based on the inspection findings, no violations were identified.
- 2. Previous violation(s) closed.
- 3. The violation(s), specifically described to you by the inspector as non-cited violations, are not being cited because they were self-identified, non-repetitive, and corrective action was or is being taken, and the remaining criteria in the NRC Enforcement Policy, NUREG-1600, to exercise discretion, were satisfied.

\_\_\_\_\_ Non-Cited Violation(s) was/were discussed involving the following requirement(s) and Corrective Action(s):

- 4. During this inspection certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance with 10 CFR 19.11.  
(Violations and Corrective Actions)

**Licensee's Statement of Corrective Actions for Item 4, above.**

I hereby state that, within 30 days, the actions described by me to the inspector will be taken to correct the violations identified. This statement of corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken, date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

## PROGRAM SCOPE

At the time of the inspection, the licensee had not yet acquired licensed material. Because of this, the next inspection date was set within one year of this inspection.

The licensee was a metal recycling facility located in Fort Wayne, Indiana, which planned to acquire an elemental analyzer as described on the license within the next month. The device would be used to analyze the composition of ferrous materials which had been shredded at the licensee's facility. The licensee did not plan to perform any maintenance on the device; all maintenance including leak tests and shutter checks would be performed by the manufacturer. The site Quality Manager stated that they would train all site personnel concerning the presence of radioactive material, and that the site provided security for the device.

## Performance Observations

The inspector toured the site and viewed the location where the device would be installed. Licensee personnel described the use, maintenance, and security of the device, and the training and audit programs which would be put into place upon receipt of the device. Interviews with licensee personnel indicated adequate knowledge of radiation safety procedures and concepts. No surveys were performed at the site because the device had not yet been received.
