

To: Nuclear Regulatory Commission
Re: Depleted Uranium Disposal Rulemaking

The U.S. already has a massive inventory of depleted uranium still mixed with hexafluoride, so it cannot be disposed of.

Once that separation occurs, the size of the waste stream and the fact that DU grows more radioactive over the course of one million years prohibits DU disposal at any of the current or pending low-level waste disposal facilities.

Re: Depleted Uranium Disposal Rulemaking

The U.S. already has a massive inventory of depleted uranium still mixed with hexafluoride, so it cannot be disposed of.

Once that separation occurs, the size of the waste stream and the fact that DU grows more radioactive over the course of one million years prohibits DU disposal at any of the current or pending low-level waste disposal facilities.
