

To: Nuclear Regulatory Commission  
Re: Depleted Uranium Disposal Rulemaking

The NRC erred when it decided to formulate guidelines for depleted uranium disposal in a low-level waste disposal facility. That decision did not take into account the hundreds of thousands of years over which DU grows more radioactive.

The NRC must, as part of this rulemaking, prepare an environmental impact statement that fully evaluates DU disposal in a deep geologic repository.

Re: Depleted Uranium Disposal Rulemaking

The NRC erred when it decided to formulate guidelines for depleted uranium disposal in a low-level waste disposal facility. That decision did not take into account the hundreds of thousands of years over which DU grows more radioactive.

The NRC must, as part of this rulemaking, prepare an environmental impact statement that fully evaluates DU disposal in a deep geologic repository.
