**To:** 'LARSON, MICHAEL J'  
**Subject:** Acceptance Review (TAC No. ME2433)

By letter dated October 22, 2009, Entergy Operations, Inc., submitted a request pursuant to 10 CFR 50.55a(f)(4)(iv) to use a portion of a later edition of the ASME OM Code for main steam safety relief valve inservice testing.

The purpose of this letter is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of the relief request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it provides technical information in sufficient detail to enable the staff to proceed with its detailed technical review and make an independent assessment regarding the acceptability of the relief request in terms of regulatory requirements and the protection of public health and safety and the environment. If additional information is needed for the staff to complete its technical review, you will be advised by separate correspondence.
