U.S. NUCLEAR REGULATORY COMMISSION

Amendment No. 63

MATERIALS LICENSE

Pursuant to the Atomic Energy Act of 1954, as amended, the Energy Reorganization Act of 1974 (Public Law 93-438), and Title 10, Code of Federal Regulations, Chapter I, Parts 30, 31, 32, 33, 34, 35, 36, 39, 40, and 70, and in reliance on statements and representations heretofore made by the licensee, a license is hereby issued authorizing the licensee to receive, acquire, possess, and transfer byproduct, source, and special nuclear material designated below; to use such material for the purpose(s) and at the place(s) designated below; to deliver or transfer such material to persons authorized to receive it in accordance with the regulations of the applicable Part(s). This license shall be deemed to contain the conditions specified in Section 183 of the Atomic Energy Act of 1954, as amended, and is subject to all applicable rules, regulations, and orders of the Nuclear Regulatory Commission now or hereafter in effect and to any conditions specified below.

Licensee	
1. ABB Inc.	In accordance with the letter dated November 18, 2009, 3. License number 06-00217-06 is amended in its entirety to read as follows:
2. 2000 Day Hill Road Windsor, Connecticut 06095	4. Expiration date April 30, 2011
	5. Docket No. 030-03754 Reference No.

6. Byproduct, source, and/or special nuclear material	7. Chemical and/or physical form	8. Maximum amount that licensee may possess at any one time under this license
A. Any byproduct material with atomic numbers 1 through 83	A. Irradiated and/or contaminated debris, inspection and test equipment, test samples, calibration standards, or residues	A. 0.5 curies
B. Any byproduct material with atomic numbers 84 through 103	B. Irradiated and/or contaminated debris, inspection and test equipment, test samples, calibration standards, or residues	B. Not to exceed 3 millicuries per nuclide and 30 millicuries total
C. Source material	C. Irradiated and/or contaminated debris, inspection and test equipment, test samples, calibration standards, or residues	C. 100 kilograms
D. Uranium 235	D. Irradiated and/or contaminated debris, inspection and test equipment, test samples, calibration standards, or residues	D. 325 grams. See Condition 13.

9. Authorized use:

A. through D. Possession and use for those activities directly or indirectly related to decontamination and dismantlement of buildings; excavation and removal of waste lines, underground utilities and debris; and remediation of soils.

Amendment No. 63

CONDITIONS

10. Licensed material may be used or stored only at the licensee's facilities located at 2000 Day Hill Road, Windsor, Connecticut.

11. The Radiation Safety Officer for this license is Heath Downey.

12. Licensed material shall be used by, or under the supervision and in the physical presence of, individuals who have received the training described in the application dated February 2, 2007.

13. The licensee is authorized to possess the total inventory of uranium-235 that existed within contaminated structures, soils, and debris as of December 31, 2008. The amount of uranium-235 specified in Item 8.D. above excludes undisturbed contaminated structures, soils, and debris and packaged waste that meets the requirements for exemption from classification as fissile material specified in 10 CFR 71.15.

14. The licensee shall not use licensed material in or on human beings.

15. Sealed sources or detector cells containing licensed material shall not be opened or sources removed from source holders by the licensee.

16. The licensee shall conduct a physical inventory every six months, or at other intervals approved by the U.S. Nuclear Regulatory Commission, to account for all sources and/or devices received and possessed under the license. Records of inventories shall be maintained for 5 years from the date of each inventory and shall include the radionuclides, quantities, manufacturer's name and model numbers, and the date of the inventory.

17. A. Sealed sources shall be tested for leakage and/or contamination at intervals not to exceed six months or at the intervals specified in the certificate of registration issued by the U.S. Nuclear Regulatory Commission under 10 CFR 32.210 or under equivalent regulations of an Agreement State.

B. Notwithstanding Paragraph A of this Condition, sealed sources designed to primarily emit alpha particles shall be tested for leakage and/or contamination at intervals not to exceed 3 months.

C. In the absence of a certificate from a transferor indicating that a leak test has been made within the intervals specified in the certificate of registration issued by the U.S. Nuclear Regulatory Commission under 10 CFR 32.210 or under equivalent regulations of an Agreement State, prior to the transfer, a sealed source received from another person shall not be put into use until tested and the test results received.

Amendment No. 63

D. Sealed sources need not be tested if they contain only hydrogen-3; or they contain only a radioactive gas; or the half-life of the isotope is 30 days or less; or they contain not more than 100 microcuries of beta- and/or gamma-emitting material or not more than 10 microcuries of alpha-emitting material.

E. Sealed sources need not be tested if they are in storage and are not being used; however, when they are removed from storage for use or transferred to another person and have not been tested within the required leak test interval, they shall be tested before use or transfer. No sealed source shall be stored for a period of more than 10 years without being tested for leakage and/or contamination.

F. The leak test shall be capable of detecting the presence of 0.005 microcurie (185 becquerels) of radioactive material on the test sample. If the test reveals the presence of 0.005 microcurie (185 becquerels) or more of removable contamination, a report shall be filed with the U.S. Nuclear Regulatory Commission in accordance with 10 CFR 30.50(c)(2), and the source shall be removed immediately from service and decontaminated, repaired, or disposed of in accordance with Commission regulations.

G. Tests for leakage and/or contamination, including leak test sample collection and analysis, shall be performed by the licensee or by other persons specifically licensed by the U.S. Nuclear Regulatory Commission or an Agreement State to perform such services.

H. Records of leak test results shall be kept in units of microcuries and shall be maintained for 5 years.

18. The licensee is authorized to transport licensed material in accordance with the provisions of 10 CFR Part 71, "Packaging and Transportation of Radioactive Material."

Amendment No. 63

19. Except as specifically provided otherwise in this license, the licensee shall conduct its program in accordance with the statements, representations, and procedures contained in the documents, including any enclosures, listed below. The U.S. Nuclear Regulatory Commission's regulations shall govern unless the statements, representations, and procedures in the licensee's application and correspondence are more restrictive than the regulations.

A. License renewal application dated January 19, 2001 (ML010290153)
B. Letter regarding amendment request dated February 2, 2007 (ML070380362)
C. Letter regarding partial site release dated December 27, 2007 (ML080020357)
D. Letter regarding the physical security plan, with attachments, dated October 20, 2008 (ML083080194)
E. Letter regarding revised site decommissioning plan, with attachments, dated December 31, 2008 (ML090160123)
F. Letter regarding request for additional information responses dated May 8, 2009 (ML091320400)
G. Letter dated November 18, 2009 (ML093270468)
