APPENDIX B
TO
FACILITY OPERATING LICENSE
FOR
POWER AUTHORITY
OF THE STATE OF NEW YORK

INDIAN POINT 3 NUCLEAR
POWER PLANT

ENVIRONMENTAL TECHNICAL SPECIFICATION
REQUIREMENTS

PART I: NON-RADIOLOGICAL ENVIRONMENTAL PROTECTION PLAN

(D E L E T E D)

Amendment No.

Attachment II
Safety Evaluation of Proposed Technical Specifications

New York Power Authority
Indian Point 3 Nuclear Power Plant
Docket No. 50-286

I. Description of Change

This revision to the Indian Point 3 Technical Specifications seeks to delete Appendix B, Part I of the Operating License in its entirety. The basis for the deletion of Appendix B, Part I is that these aquatic requirements are now under the jurisdiction of the New York State Department of Environmental Conservation, as delegated by the U.S. Environmental Protection Agency.

II. Evaluation of Change

The proposed Technical Specifications changes as indicated in Attachment I are in response to a request contained in the December 7, 1984 NRC letter, which transmitted the Radiological Effluent Technical Specifications for Indian Point 3. As the Authority holds an effective State Pollutant Discharge Elimination System permit, the water quality conditions in the existing Appendix B, Part I should be removed as a matter of law (the Federal Water Pollution Control Act Amendments of 1972). This proposed change will not adversely impact the environment.

The Authority considers that the proposed changes can be classified as not likely to involve significant hazards considerations since the proposed changes constitute "a change to make a license conform to changes in the regulations, where the license change results in very minor changes to facility operations clearly in keeping with the regulations." (Example (vii), Federal Register, Vol. 48, No. 67 dated April 6, 1983, page 14870).

III. Impact of Change

This change will not impact the following:

- ALARA Program
- Fire Protection Program
- Emergency Plan
- FSAR or SER Conclusions
- Overall Plant Operations

IV. Conclusion

The incorporation of these modifications: a) will not increase the probability nor the consequences of an accident or malfunction of equipment important to safety as previously evaluated in the Safety Analysis Report; b) will not increase the possibility for an accident or malfunction of a different type than any evaluated previously in the Safety Analysis Report; c) will not reduce the margin of safety as defined in the basis for any Technical Specification; d) does not constitute an unreviewed safety question as defined in 10 CFR 50.59; e) involves no significant hazards considerations as defined in 10 CFR 50.92.
