Subject: **Indian Point 3 Nuclear Power Plant**
Docket No. 50-286
Supplement to Proposed Changes to Technical
Specifications Regarding Extending Emergency Diesel
Generator Testing to Accommodate a 24 Month Operating Cycle

Reference: NYPA letter, R.E. Beedle to the NRC Document Control Desk, dated
October 19, 1992 (IPN-92-051).

Dear Sir:

The Authority recently proposed changing the frequency of emergency diesel generator testing to accommodate a 24 month operating cycle (Reference). Based on discussions held with our NRC Project Manager, the Authority is transmitting the enclosed Technical Specification pages, to be used in place of those submitted with the referenced letter. The reworded Technical Specification and basis incorporate a more detailed description of the current testing practice, in order to facilitate issuance of the requested Technical Specification amendment.

If you have any questions, please contact Mr. P. Kokolakis.

Very truly yours,

A handwritten signature of Ralph E. Beedle in dark ink, written over a horizontal line.
