SUBJECT			TELEPHONE INCOMING
Structural RAIs for the Model No. 3-60B package			
			OUTGOING
SUMMARY (Continue on Page 2)			
NRC Attendees: Gordon Bjorkman, Neil Day, Pierre Saverot			
The objective of the conference call was to discuss the results of the sensivity analysis of the 3-60 B package modeling, as			
requested at the November 24, 2009 meeting between staff and EnergySolutions.			
Staff said that this analysis "goes a long way" to addressing the issues raised in the RAI letter dated November 17, 2009. The applicant indicated that it has also addressed the request for a convergence study by changing the element length and			
obtaining results that are within 95% of the theoretical value.			
The applicant will combine the sensitivity and convergence studies into a new report as an Appendix to the SAR and perform			
necessary modifications to the SAR e.g., nodal averaging issues, to respond to the structural RAIs.			
Staff requested the applicant to provide information on the exact model parameters, e.g., thickness, radius, etc, that are used			
in the convergence study to allow staff to rapidly perform an independent verification.
