Attention:

Mr. Thomas M. Novak

Assistant Director for Operating Reactors

Division of Licensing

Subject:

Indian Point 3 Nuclear Power Plant Anticipated Transient Without Scram (ATWS) Mitigating System Actuation

Circuitry (AMSAC)

Dear Sir:

This letter responds to your November 2, 1981 letter regarding the IP-3 AMSAC design.

Attachment 1 to this letter formally responds to your request for additional information which the Authority has previously discussed with Mssrs. R. Hendal and J. O. Thoma of the NRC in an October 13, 1981 telephone conversation.

The Authority's December 30, 1981 letter (IPN-81-98) proposed a schedule for implementation of the AMSAC. This schedule indicated completion during the cycle 5/6 refueling outage (expected in mid-1985) and included implementation of the auto start feature of the turbine driven auxiliary feedwater pump.

Based on the above schedule the Authority anticipates that a schedule for submittal of the final design and the unavailability analysis requested in your November 2, 1981 letter can be transmitted to you by June 30, 1982 and June 30, 1983 respectively.

If you have any questions regarding this matter please contact Mr. J. Lamberski of my staff.

Very truly yours,

J. P. Bayne

Senior Vice President
Nuclear Generation

Aoo.
