Re: Indian Point Unit No. 2  
Docket No. 50-247

Dear Dr. Morris:

On March 19, 1971, Con Edison submitted information to the AEC Staff which described, among other things, the level of plant completion which Con Edison believed was necessary prior to commencing fuel loading and performing subsequent sub-critical testing.

In your letter of April 26, 1971 you provided us with general guidance regarding the Staff's position on this matter. We met with you on May 18, 1971 in Bethesda and reviewed the present state of plant completion.

On the basis of our discussions we intend to complete the following work by July 13, 1971, with the exception of minor "punch list items" none of which affects system safety:

- (a) All systems and all work inside the containment;
- (b) All systems outside containment but connected directly to the reactor coolant system; and
- (c) All engineered safety systems including the diesels.

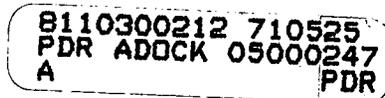

It is our understanding that, once this work has been completed, the plant will be in the state of "significantly higher degree of completion" mentioned in your letter as a condition of fuel loading. We request your concurrence that fuel loading would be proper after the work described above has been completed and, accordingly, your support of a motion to be filed before July 13, 1971 with the Atomic Safety and Licensing Board for authorization to load fuel.

Very truly yours,

William J. Cahill, Jr.  
Vice President
