Docket No. 50-247

APPLICATION FOR AMENDMENT TO
OPERATING LICENSE

Pursuant to Sections 50.59(c) (1) and 50.90 of the regulations of the Nuclear Regulatory Commission, Consolidated Edison Company of New York, Inc. (Con Edison), as holder of Facility Operating License No. DPR-26, hereby requests an amendment to the Technical Specifications set forth in Appendix A to that license.

The requested change would temporarily extend the testing interval set forth in Sections 3.10, 3.11 and 4.1 of the Technical Specifications for certain tests involving the use of the incore instrumentation system. The time period between each of these tests is to be extended by 15 effective full power days. In no event, however, will the time period be deemed extended beyond February 6, 1976. Sufficient time will thereby be provided for the performance of certain necessary maintenance work on the incore instrumentation system. The extension is consistent with the maximum times allowed between tests as specified in Tables 4.1-2, and 4.1-3 of the Technical Specifications.

The proposed Technical Specification change consists of the specific revisions set forth in Attachment A, to this Application. A safety evaluation of the proposed

change is set forth in Attachment B to this Application. This evaluation demonstrates that the proposed change does not involve a significant hazards consideration and will not cause any change in the types or an increase in the amounts of effluents or any change in the authorized power level of the facility.
