Regulatory Docket File

Dear Mr. Goller:

I understand that there has been correspondence between yourself and Consolidated Edison regarding the necessity of tests and possible repairs of steam generator tubes at Indian Point 2.

I would appreciate receiving copies of any such correspondence, NRC memoranda or other documents discussing the need for and conduct of such tests and possible repairs.

In addition, I wish to receive copies of relevant correspondence, memoranda or documents concerning similar problems currently affecting other U.S. reactors. I understand Surry 1 and/or 2 and other units may be undergoing similar tests.

CEP is a non-profit research organization which consults for government agencies and citizens groups on economic issues related to nuclear power.

Thank you.

Sincerely,

Charles Komanoff
