**EVENT DESCRIPTION**

02 During cold shutdown condition for a scheduled outage, periodic surveil-																																																																															
03 lance test PT-M14A [Containment Spray Pump Functional Test] was not per-																																																																															
04 formed at the required time frequency. The test was completed success-																																																																															
05 fully prior to returning the unit to service. [A.O.-75-2-15(B)].																																																																															
06

7 8 9 10										11		12 17										43		44 47										48	

**CAUSE DESCRIPTION**

08 Test could not be performed since the reactor trip breakers, which are																																																																															
09 required to be operable to accomplish the test, were isolated to provide																																																																															
10 protection for workers performing maintenance during the outage.

**ADDITIONAL FACTORS**

18 By submittal dated 8/21/75, a tech. spec. change was requested which																																																																															
7 8 9 would clarify surveillance requirements and avoid this type of conflict																																																																															
19 with personnel protection considerations.
