Re: Indian Point Unit No. 2
A.E.C. Docket No. 50-247
A.O.-5-2-1

Mr. James P. O'Reilly, Director
Directorate of Regulatory Operations
Region I
U.S. Atomic Energy Commission
631 Park Avenue
King of Prussia, Pennsylvania 19406

Dear Mr. O'Reilly:

In accordance with the Technical Specifications of Facility Operating License No. DPR-26, we wish to inform you of an Abnormal Occurrence (A.O.5-2-1), which was identified and reported to Mr. John Hannon of your office on January 6, 1975.

The occurrence is the type defined by Technical Specification 1.8.b and relates to the reactor being made critical with only three out of the five fan cooler-charcoal filter units in a fully operable condition.

On January 3 and 4, 1975, while Unit No. 2 was shutdown for a scheduled outage, a periodic surveillance test PT-SAL of the fan cooler units was performed. The reactor was made critical on January 5, 1975 and the unit was returned to service. Later in the day the unit tripped and was in a shutdown condition on January 6, 1975 when the results of periodic tests were reviewed by the operating staff. During the review of the results of PT-SAL it was discovered that two fan cooler-charcoal filter units were inoperable when the reactor was taken critical the preceding day. The inoperability was due to slightly higher than acceptable differential pressure across the demister and HEPA filter. Differential pressures of 7.72 and 5.6 inches of water were noted on No. 22 and No. 25 fan cooler units respectively. The maximum allowed by Technical Specifications is 5 inches of water.

The demisters of the two fan cooler units have been cleaned and the units have been restored to an operable status.

cc/Mr. Edson G. Case

Very truly yours,
Walter Stein
