In the Matter of Consolidated Edison Company of New York, Inc.
(Indian Point Nuclear Generating Station, Unit No. 2)
Docket No. 50-247

Gentlemen:

As I indicated on the record, the staff is preparing to issue the testing license, authorizing testing operations at up to 20% of full power, authorized by the Board's Initial Decision of July 14, 1972. I have distributed to the Board and the parties today a copy of the technical specifications that would be appended to such license. These have slight changes from applicant's proposed technical specifications and have certain changes to reflect the pressurized fuel now loaded in the reactor.

For the Board's convenience, I am enclosing with this letter a copy of just those pages containing changes. In addition, I am enclosing a copy of the proposed environmental technical specifications which would also be appended to a testing license.

The 20% testing license with the technical specifications distributed today, would be issued upon determination by the Directorate of Regulatory Operations that the facility is ready for such operation. Such determination is presently expected by April 19, 1973.

Sincerely,

OFFICE ▶		Myron Karman
