Paul.

The following is a question from the staff, which is related to socioeconomics:

PEF ER (2008, page 5-125) says "Refueling outages will last approximately 25 to 30 days and require approximately 800 additional workers every 18 months." The ER suggests that these outages should be staggered with CREC outages so the same workers can be used. Is this 800 workers every 18 months for a single unit or for both units.

Other than what the Corps may want to discuss for LEDPA/alternative sites, and the two emails addressing recalibration of the groundwater model and terrestrial ecology, this should be it for Thursday's teleconference. Information to call into the teleconference is as follows:

Toll Free Number: 888-324-2911  
Passcode: 45354

Thanks,

Doug Bruner
