Mr. William A. Anders, Chairman Nuclear Regulatory Commission Washington, D.C. 20555

Dear Mr. Anders:

I am concerned about the charges of NRC Project Manager, Robert D. Pollard, as reported in the <u>New York Times</u> of February 10, 1976. Therefore, I would appreciate your response to each of his general and specific charges below:

- 1. "The Indian Point plants have been badly designed and constructed and are susceptible to accidents that could cause large-scale loss of life and other radiation injuries, such as cancers and birth defects."
- 2. "The magnitude of the hazards associated with these plants has been suppressed by the Government because the release of such information might cause great public opposition to their operation."
- 3. The No. 2 reactor had a "serious design defect submerged valves that could render required safety systems inoperable during an accident."
- 4. Valves on the No. 3 plant "which are supposed to prevent escape of radioactivity during accidents" were defective.
- 5. Electrical systems on the No. 2 plant "suffer from the same fundamental weaknesses as those which allowed a fire last year at the Brown's Ferry plant in Alabama to paralyze much of that plant's vital safety apparatus."
- I look forward to an early reply. All the best.

Edward I. Koch
