## Columbia Site

At Columbia, we design and fabricate completed nuclear fuel assemblies and fuel-related products, such as top and bottom nozzles, control rods, and Zirconium Diboride and Erbium integral fuel burnable absorbers for pressurized water reactors and VVER reactors.

Since beginning production in 1969, over 51,000 nuclear fuel assemblies have been produced at the Columbia Site.

Fuel and fuel-related products are exported to a number of other countries including: Belgium, Brazil, Czech Republic, France, Japan, Slovenia, South Korea, Spain, Sweden, Taiwan and the United Kingdom.
