Dear Sirs,

Although I was unable to attend the Symposium on Stripped Bass, recently held at Mt. St. Vincents College, I was able to get a few facts concerning the spawning of the stripped Bass, and, also, the danger the power plants are putting on this and other species in the area. I am writing this letter because I am an ecology minded person, who, cannot stand by and see any person, group of persons, or company fill their pockets with greed money, at the expense of ecology. Are we going to have the same condition we had back in the 1800's? when the great American buffalo almost became extinct, I see no reason why the Consolidated-Edison Co. cannot install a closed circuit system for cooling the h

generator water immediately. I firmly believe their plant should not be allowed to open until it can be operated with this system.

I was happy to hear the A.E.C. has taken a stand opposing the Con. Ed. Co. operating without the cooling towers. Please keep up the good work before we loose what few fish we have left.

I would also like to know if it would be possible to get a copy of; — The Final Environmental Statement Related to Con-Edison Indian Point No. 2 Plant, — docket No. 50-247. I would appreciate receiving this document, so I could get all the facts concerning this very vital and controversial issue.
